Exam Nutanix NCP-DB-6.10 Questions Fee - Real NCP-DB-6.10 Exam Questions

Unlike many other learning materials, our NCP-DB-6.10 study materials are specially designed to help people pass the exam in a more productive and time-saving way, and such an efficient feature makes it a wonderful assistant in personal achievement as people have less spare time nowadays. On the other hand, NCP-DB-6.10 Study Materials are aimed to help users make best use of their sporadic time by adopting flexible and safe study access.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q54-Q59):

NEW QUESTION # 54

What are two status values that can be set within the Alerts Dashboard? (Choose two.)

- A. Acknowledged
- B. Data Resiliency
- C. Auto
- D. Resolved

Answer: A,D

Explanation:

The correct answer is B and D because these are the two status values that can be set within the Alerts Dashboard in NDB.

Resolved means that the alert has been fixed and no longer requires attention. Acknowledged means that the alert has been seen and is being worked on. Option A is incorrect because Auto is not a status value, but a mode that automatically resolves alerts based on predefined rules. Option C is incorrect because Data Resiliency is not a status value, but a feature that ensures the availability and integrity of the data in NDB.

NEW QUESTION # 55

An administrator has applied an Oracle security patch to a database server VM registered in Era. How do you make this change available to other existing database instances?

- A. Create a n.. software profile version from the patched VM.
- B. Create a new software profile in Era from the patched VM.
- C. Merge the changes into an existing software profile.
- D. Register the VM as a have' database server VM and then create a software profile using this newly registered VIVI.

Answer: B

Explanation:

Nutanix Database Service (NDB) uses software profiles for database patching to keep your databases secure and optimized. When a new database is provisioned, it will be on your current environment's database version to maintain consistency and stop version sprawl. Therefore, after an administrator has applied an Oracle security patch to a database server VM registered in Era, the change can be made available to other existing database instances by creating a new software profile in Era from the patched VM.

NEW QUESTION # 56

What is used to temporarily store the transaction logs of the source database before they are copied to the log?

- A. NDB Profiles
- B. Database Agent
- C. Time Machine
- D. NDB Drive

Answer: B

Explanation:

The Database Agent is used to temporarily store the transaction logs of the source database before they are copied to the log. This is a critical component for ensuring data consistency and recovery in database operations.

NEW QUESTION # 57

An administrator needs to roll back an Oracle patch on a database server VM using NDB. What is required for this action to be successful?

- A. The database must be in read-only mode.
- B. The database must be shut down.
- C. The patch must have been applied on Grid home only using NDB.
- D. The patch must have been applied using NDB.

Answer: D

Explanation:

To roll back an Oracle patch on a database server VM using NDB, the patch must have been applied using NDB in the first place. This is because NDB maintains a patch inventory and history for each database server VM and database that it manages. NDB uses this information to determine which patches can be rolled back and how to revert the changes made by the patch. If the patch was applied outside of NDB, NDB would not have the patch information and would not be able to roll back the patch. Therefore, the patch must have been applied using NDB for the rollback action to be successful. The other options are not required for the rollback action. The database does not need to be shut down or in read-only mode, as NDB can perform the rollback operation online. The patch does not need to be applied on Grid home only, as NDB can roll back patches applied on both Grid home and Database home.

NEW QUESTION # 58

While using Time Machine (TM) to restore a source database, the option to restore data to Point in Time is not available. What should an administrator do to restore databases to Point in Time?

- A. Update TM SLA to BRASS or lower.
- B. Create DB clone using a snapshot.
- C. Restore Source DB using a snapshot
- **D. Update TM SLA to BRONZE or higher.**

Answer: D

Explanation:

In Nutanix Database Service (NDB), the Time Machine (TM) feature allows restores, including Point-in-Time (PIT) restores, which require continuous log retention to replay transaction logs to a specific moment. If the option to restore data to a Point in Time is unavailable, it indicates that the current Time Machine Service Level Agreement (SLA) does not support continuous log retention. NDB SLAs are categorized (e.g., BRONZE, SILVER, GOLD), with BRONZE or higher levels required to enable PIT restore by including continuous log retention. The administrator must update the TM SLA to at least BRONZE to enable this feature, ensuring logs are retained for PIT operations.

NEW QUESTION # 59

.....

In the 21st century, all kinds of examinations are filled with the life of every student or worker. We need to pass some exams to get the corresponding certificates like NCP-DB-6.10 certification, so as to get the recognition of enterprises and society. However, passing an NCP-DB-6.10 Exam is not easy, and a large number of people fail to pass it every year, as is the case with the NCP-DB-6.10 exam. But if you choose to buy our NCP-DB-6.10 study materials, you will pass the exam easily.

Exam NCP-DB-6.10 Questions Fee: https://www.test4cram.com/NCP-DB-6.10_real-exam-dumps.html

If you need help on any questions or any Test4Cram Exam NCP-DB-6.10 Questions Fee exam PDF and APP Test Engines, customer support team is ready to help at any time when required, Once you have put all your effort, and investment and prepared well then you will be in a position to pass the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 NCP-DB-6.10 certification exam, As a result, a massive number of IT professionals are aiming to get Exam NCP-DB-6.10 Questions Fee - Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 exam.

I love vintage clothes, In this example, if you wanted to find all NCP-DB-6.10 Study Dumps Accounts not just active or inactive) you would use Advanced Find and remove any filter for account status, to return all Accounts.

Desktop-Based Nutanix NCP-DB-6.10 Practice Test Software

If you need help on any questions or any Test4Cram NCP-DB-6.10 Exam PDF and APP Test Engines, customer support team is ready to help at any time when required, Once you have put all your effort, and investment and prepared well then you will be in a position to pass the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 NCP-DB-6.10 certification exam.

As a result, a massive number of IT professionals NCP-DB-6.10 Test Papers are aiming to get Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 exam, i cleared, yessss, i cleared my exam, Numerous of our loyal customers wrote to us to praise that the NCP-DB-6.10 exam questions are the same with the real exam questions and they passed NCP-DB-6.10 exam with ease.
