* Side-by-side extensibility (B): This approach involves developing and deploying custom applications on the SAP BTP, which runs independently of the core S/4HANA system. It allows for greater flexibility and scalability while ensuring minimal impact on the core system.

* Classic extensibility (A): Classic extensibility refers to modifications made directly within the SAP system, which is not supported in the public cloud edition due to its standardized nature.

* Key user extensibility (C): Key user extensibility allows for in-app customizations, such as adding fields or logic, but it does not involve hosting extensions on SAP BTP.

* Developer extensibility (D): Developer extensibility typically refers to custom developments within the system, which is limited in the public cloud edition.
