Exam C1000-200 Consultant | C1000-200 Review Guide

Recently, C1000-200 exam certification, attracting more attention from more and more people in IT industry, has become an important standard to balance someone's IT capability. Many IT candidates are confused and wonder how to prepare for C1000-200 exam, but now you are lucky if you read this article because you have found the best method to prepare for the exam from this article. You will ensure to get C1000-200 Exam Certification after using our C1000-200 exam software developed by our powerful Real4test IT team. If you still hesitate, try to download our free demo of C1000-200 exam software.

IBM MQ v9.4 Administrator - Professional Sample Questions (Q115-Q120):

NEW QUESTION # 115

In IBM MQ, when multiple distributed applications exchange critical business information across unreliable networks, which mechanism guarantees that messages will not only be delivered in the correct order but also without duplication, even if retransmissions occur due to failures?

- A. Dead letter queue forwarding as a standard delivery mechanism
- B. Sequence number tracking combined with acknowledgment protocols
- C. Queue depth monitoring with automatic cleanup
- D. Channel retry policies with unlimited attempts

Answer: B

Explanation:

IBM MQ ensures reliable once-only delivery by using sequence numbers and acknowledgments across channels, preventing duplication and preserving message order during retries.

NEW QUESTION # 116

In scenarios where a message cannot be processed due to an unexpected application error, which IBM MQ mechanism ensures that the message is safely returned to the queue and retried according to a defined policy, preventing loss or duplication of messages while maintaining processing efficiency?

- A. Dead-letter queue for undeliverable messages
- **B. Backout queue with a defined backout threshold**
- C. Temporary queue for manual retry
- D. Alias queue forwarding messages automatically

Answer: B

Explanation:

The backout queue captures failed messages for safe retry, using the backout threshold to prevent infinite retries, ensuring no message is lost or duplicated.

NEW QUESTION # 117

When an IBM MQ administrator wants to ensure that monitoring tools can collect real-time operational data such as queue depth, channel status, and message rates, which feature should be enabled to generate event messages that can be processed by monitoring systems?

- A. Dead Letter Queue Analysis
- B. Queue Triggers
- **C. Statistics and Accounting Events**
- D. Channel Synchronization

Answer: C

Explanation:

Statistics and Accounting Events generate system-level information for performance monitoring, helping administrators analyze throughput, latency, and system health.

NEW QUESTION # 118

In IBM MQ environments where high security is mandatory, such as healthcare or government systems, which approach provides the strongest protection by ensuring encrypted communication, authenticated access, and prevention of unauthorized connections?

- A. Allowing anonymous channel connections but auditing logs frequently
- B. Relying only on firewall rules to restrict connections
- C. Using default server channels without additional configuration
- **D. Enabling TLS/SSL encryption with certificate-based authentication and configuring CHLAUTH rules**

Answer: D

Explanation:

TLS/SSL with certificates and CHLAUTH rules ensures secure encryption, authenticated access, and prevents unauthorized channel connections, making it essential for secure industries.

NEW QUESTION # 119

When implementing IBM MQ in an enterprise environment with multiple queue managers distributed across different data centers, how do sender-receiver channel pairs ensure reliable and ordered delivery of messages between queue managers, and what configuration elements are critical to maintaining message integrity during network failures?

- A. Sender-receiver channels automatically replicate queue data to all other queue managers without configuration
- B. Sender-receiver channels only transmit non-persistent messages and do not guarantee order
- **C. Sender-receiver channels establish a persistent TCP/IP connection between queue managers, and configuration parameters such as batch size, retry intervals, and message persistence ensure reliable and ordered delivery**
- D. Sender-receiver channels are only used for testing purposes and should not be used in production

Answer: C

Explanation:

Sender-receiver channel pairs maintain persistent connections, and proper configuration of retry intervals, message persistence, and batch handling ensures that messages are delivered reliably and in order even during network disruptions.

NEW QUESTION # 120

.....

IBM C1000-200 Exam is a very hot exam. Although it is difficult to pass the exam, the identification of entry point will make you easy to pass your exam. Real4test practice test dumps are your best choice and hit rate is up to 100%. And our exam dumps can help you solve any questions of C1000-200 exam. As long as you carefully study the questions in the dumps, all problems can be solved. Purchasing Real4test certification training dumps, we provide you with free updates for a year. Within a year, as long as you want to update the dumps you have, you can get the latest version. Try it and see for yourself.
