能力の尺度は何ですか？ もちろん、ほとんどの企業は取得した資格の数に応じてレベルを判断します。包括的なものではないかもしれませんが、資格試験に合格することは雇用主を雇うための非常に簡単な方法です。ACD201試験の実践では、市場でこの募集現象について質問します。これは、ACD201試験方法をユーザーがすばやく合格できるように調整されています。ACD201学習ガイドの品質は非常に優れており、これはACD201試験問題の年間合格率に反映されています。

Appian ACD201 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
トピック 2	• Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.

トピック 3	Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
トピック 4	Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.

ACD201更新版、ACD201資格取得講座

ShikenPASSについてどのくらい知っているのですか。ShikenPASSのACD201試験問題集を利用したことがありますか。あるいは、知人からShikenPASSを聞いたことがありますか。IT認定試験に関連する参考書のプロな提供者として、ShikenPASSは間違いなくあなたが今まで見た最高のサイトです。なぜこのように確かめるのですか。それはShikenPASSのように最良のACD201試験参考書を提供してあなたに試験に合格させるだけでなく、最高品質のサービスを提供してあなたに100%満足させることもできるサイトがないからです。

Appian Senior Developer 認定 ACD201 試験問題 (Q70-Q75):

質問 # 70

You're designing a report to show the total number of cases per month grouped by region. A synced record exists for the data source.

Which design pattern is most appropriate in this case?

- A. Configure a!pieChartField() using a!pieChartConfig() with the case creation date as the primaryGrouping and the region as the secondaryGrouping.
- B. Configure a!columnChartField() using a!columnChartConfig() with the case creation date as the primaryGrouping and the region as the secondaryGrouping.
- C. Use a!queryRecordType() with a!aggregationFields() to group the case creation date by region into a local variable. Pass the local variable value into the data input of a!columnChartField()

正解: C

解説:

Using a!queryRecordType() with a!aggregationFields() to group by case creation date and region, storing the result in a local variable and passing it to the data input of a!columnChartField() ensures efficient aggregation and flexible chart display for your report.

質問 # 71

You're creating a synced record type which will store read-only data from an external web service. Data in the external system is updated nightly, and the latest information must be available to users in the morning.

Currently there are approximately 150,000 entries in the external system, and this number is not expected to change significantly. There is an existing integration object and associated expression rule, which when called returns the complete dataset from the external system.

What are two configurations that you must apply to ensure that the latest and complete record set is available?

(Choose two.)

- A. Within the record type, schedule a full sync to occur nightly after the data is refreshed in the external system.
- B. Within the Source Filters settings on the record type, disable the row limit option so that all entries can be retrieved from the external system.
- C. Modify the integration object and associated expression rule to return batches of 1000 based on a batch number passed in from the record type.
- D. Set all record fields to evaluate in real-time so that the latest information is always retrieved from the web service.

正解: A、B

解説:

Scheduling a nightly full sync ensures the record type is updated with the latest data after the external system refreshes. Disabling the row limit in Source Filters allows the complete dataset to be retrieved and synced, ensuring all entries are available.

質問 # 72

You need to assign a user input task to three different groups of users: Group A, Group B, and Group C.

Each task form shares some common components with the following key differences:

Group B will receive a task that includes an additional section.

Group C will only view and enter data for one section.

What should you do?

- A. Within the process model, utilize an XOR gateway to conditionally select between the three different user input tasks.
- B. Configure the version setting on the user input task node to conditionally display the correct form
- C. Utilize conditional logic on the form along with the showWhen parameter for interface components.

正解: C

解説:

Using conditional logic with the showWhen parameter on the form allows you to display or hide specific sections for each group within a single user input task, making the solution flexible and maintainable.

質問 # 73

An insurance company's product details are currently distributed across numerous database tables, encompassing over 60 to 70 fields.

You need to implement a product comparison tool for business users to compare up to three insurance products simultaneously, with all the product details in a tabular format.

Refer to the following sample format:

Attribute	PRODUCT 1	PRODUCT 2	PRODUCT 3
Name			
Type			
Premium			
Average			
Claim time			

Which object should be used to transform the data into the required format?

- A. VCCViews
- B. Record type with relationships
- C. Stored procedure

正解: A

解説:

Database views are ideal for transforming complex, distributed product data into a single, flattened structure tailored for reporting or comparison. In this case, a view can pivot the 60-70 fields and organize them by attribute (e.g., Name, Type, Premium) across multiple product columns, enabling a tabular comparison layout like the one shown. Views also optimize performance and reduce transformation overhead in the interface layer.

質問 # 74

You're designing a custom component rule!pagingComponent() to page through a list of items. The component must display the current page numbers being shown, as well as the total number of items. Users should be able to click arrows to increase or decrease the pagination.

Review the following:

```
localVariables
local!query: rule
{
  rule!interface(),
  rule!pagingComponent()
}
```

Which two patterns should be used when calling the component in this scenario? (Choose two.)

- A. A local variable local!pagingInfo inside rule!pagingComponent() with an initial value. When the arrows are clicked, this updates the value of the local variable.
- B. Passing into the rule input totalCount of rule!pagingComponent() the value: local!query.totalCount where local!query is returning a dataSubset and returnTotalCount = "True".
- C. A rule input ri!pagingInfo on rule!pagingComponent() with a local variable of the same name in the main interface with an initial value. When the arrows are clicked, this updates the value of the local variable in the main interface.
- D. A local variable local!totalCount calculated using count(local!query), which is passed into rule!pagingComponent() via a rule input. The data type of local!query is a list of record or Custom Data Type (CDT).

正解: B、C

解説:

Passing local!query.totalCount (from a dataSubset with returnTotalCount: true) into a rule input allows rule!pagingComponent() to accurately display total items for pagination.

Managing paging state (such as ri!pagingInfo) as a local variable in the main interface and updating it when arrows are clicked ensures that pagination is controlled centrally, maintaining state across the UI and allowing the component to function as intended.

質問 #75

.....

ACD201資格は重要な認証科目です。人数は少なくて需要は大きいので、この認証を持っている人は給料が一番高い人になっています。ACD201試験に合格したら、あなたの知識と能力を証明することができます。あなたはそれらの専門家の一員になれば、あなたはいい仕事を探せます。我々のACD201問題集を利用して、試験に参加しましょう。
