156-836 Valid Test Sims, 156-836 Reliable Exam Review

TestsDumps's braindumps provide you the gist of the entire syllabus in a specific set of questions and answers. These study questions are most likely to appear in the actual exam. The Certification exams are actually set randomly from the database of 156-836. Thus most of the questions are repeated in 156-836 Exam and our experts after studying the previous exam have sorted out the most important questions and prepared dumps out of them. Hence TestsDumps's dumps are a special feast for all the exam takers and sure to bring them not only exam success but also maximum score.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q70-Q75):

NEW QUESTION # 70
Logs without a dedicated log file can be found in

- A. $RTDIR/log/junk.log
- B. /var/log/junk.log.dbg

- C. $FWDIR/log/fw.log
- D. /var/log/messages

Answer: D

Explanation:
Explanation
The /var/log/messages file is a general system log file that contains information about various system events, such as booting, shutdown, cron jobs, kernel messages, and other system services. Logs without a dedicated log file can be found in this file, as well as some Maestro Gaia Clishcommands that are not saved in the
/var/log/command_logger.log file.

NEW QUESTION # 71
Do all MHOs need to be upgraded before starting the SGM upgrades?

- A. A minimum of one of the MHOs should be upgraded before starting the SGM upgrades. However, there is no requirement to upgrade all the SGMs during the same maintenance window as the MHO
- B. All MHOs must first be upgraded before starting the SGM upgrades However, there is no requirement to upgrade all the SGMs during the same maintenance window as the MHOs.
- C. During the upgrade process all SGMs should be upgraded before upgrading all of the MHOs.
- D. MHOs do not need to be upgraded at all because Maestro supports the use of different versions between the MHOs and SGMs.

Answer: B

Explanation:
Explanation
This is the correct answer because it follows the upgrade order and procedure specified in the R81.10 and R81.20 Administration Guides for Maestro environments. The MHOs are responsible for managing and synchronizing the SGMs, so they must be upgraded to the target version before the SGMs. However, the SGMs can be upgraded one by one or in batches, as long as they are compatible with the MHOs. The upgrade process also supports Multi-Version Clustering, which allows different versions of SGMs to operate in the same Security Group with zero downtime.

NEW QUESTION # 72
In a dual MHO environment, MHO1 and MHO2 are connected to the SGM line cards in which way?

- A. MHO1 and MHO2 are connected to the line cards in any order administrators see fit.
- B. MHO 1 is connected to the even-numbered ports, while MHO2 is connected to odd-numbered ports.
- C. MHO1 and MHO2 are connected to the SGMs using the Sync cable.
- D. MHO 1 is connected to the odd-numbered ports, while MHO2 is connected to even-numbered ports.

Answer: B

Explanation:
The correct way to connect MHO1 and MHO2 to the SGM line cards in a dual MHO environment is to use the even-numbered ports for MHO1 and the odd-numbered ports for MHO2. This is to ensure that each SGM has two downlinks to each MHO, and that the downlinks are balanced across the different NICs and links.
This provides redundancy and high availability for the traffic flow between the SGMs and the MHOs.

NEW QUESTION # 73
Which licenses should be issued for the Orchestrator?

- A. The Orchestrator is considered a Management server, hence it's licensed the same way
- B. The Orchestrator requires NGTX license
- C. No licenses are required for Orchestrator
- D. Depends on Software Blades enabled on connected appliances

Answer: C

Explanation:
Orchestrators in many network environments do not require separate licenses, as they primarily function to manage and distribute network traffic.

NEW QUESTION # 74
What is an uplink interface used for?

- A. To connect appliances to customer's infrastructure
- B. To connect in between Orchestrators
- C. To connect in between appliances
- D. To connect Orchestrators to customer's infrastructure

Answer: D

Explanation:
An uplink interface in a Check Point Maestro environment is specifically used to connect Maestro Hyperscale Orchestrators (MHOs) to the customer's network infrastructure, such as switches, routers, or firewalls. These interfaces facilitate the transmission and reception of management and control traffic between the MHOs and the customer's network. They are critical for integrating the Maestro system with the external network environment.
Exact Extract:
"Uplink interfaces are used to connect Maestro Hyperscale Orchestrators (MHOs) to the customer's network infrastructure, such as switches, routers, or firewalls. They are also used to send and receive management and control traffic from the customer's network to the MHOs."
-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 1: Introduction to Check Point Maestro, Lesson 1.3:
Maestro Interfaces, page 1-10
-Check Point R81 Maestro Administration Guide, Chapter 1: Introduction to Check Point Maestro, Section:
Interfaces, page 1-8
Explanation of Options:
* A. To connect in between appliances: Incorrect, as uplink interfaces are not used to connect appliances (Security Group
Members) to each other. This is typically handled by downlink interfaces or internal backplane connections.
* B. To connect appliances to customer's infrastructure: Incorrect, as appliances (SGMs) connect to the Orchestrators via downlink interfaces, not directly to the customer's infrastructure.
* C. To connect Orchestrators to customer's infrastructure: Correct, as uplink interfaces are explicitly designed for this purpose, as stated in the courseware and administration guide.
* D. To connect in between Orchestrators: Incorrect, as connections between Orchestrators (e.g., in a Dual-Site setup) are typically handled via site-sync ports, not uplink interfaces.
