Latest Braindumps Salesforce Mule-Dev-202 Ppt & Mule-Dev-202 Exam Cram Pdf

When preparing to take the Salesforce Mule-Dev-202 exam dumps, knowing where to start can be a little frustrating, but with ActualTestsIT Salesforce Mule-Dev-202 practice questions, you will feel fully prepared. Using our Salesforce Mule-Dev-202 practice test software, you can prepare for the increased difficulty on Salesforce Mule-Dev-202 Exam day. Plus, we have various question types and difficulty levels so that you can tailor your Salesforce Certified MuleSoft Hyperautomation Developer exam dumps preparation to your requirements.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q25-Q30):

NEW QUESTION # 25

The MuleSoft team at Northern Trail Outfitters wants to create a project skeleton that developers can use as a starting point when creating API implementations with Anypoint Studio. This will help drive consistent use of best practices within the team. Which type of Anypoint Exchange artifact should be added to Exchange to publish the project skeleton?

- A. RAML trait definitions to be reused across API implementations
- B. An example of an API implementation following best practices
- C. A MuleSoft application template with key components
- D. A custom asset with the default API implementation

Answer: C

Explanation:

To create a project skeleton that developers can use as a starting point for API implementations with Anypoint Studio, the best approach is to use a MuleSoft application template:

MuleSoft Application Template:

A MuleSoft application template includes key components and configurations that follow best practices. It provides a consistent starting point for new projects, ensuring that all developers adhere to the same standards.

Benefits:

Using a template helps enforce best practices, reduces the setup time for new projects, and ensures consistency across different implementations.

Publishing to Anypoint Exchange:

Once the template is created, it can be published to Anypoint Exchange where it is accessible to the entire development team. Developers can then use this template to kickstart their API projects, ensuring a uniform approach across the organization.

NEW QUESTION # 26

AnyAirlines has MuleSoft Composer installed on their production Salesforce environment.

To test flows with data in multiple non-production environments, what does the hyperautomation specialist need to do?

- A. Create a connection to each of the non-production environments within the Composer UI.
- B. Install MuleSoft Composer in only one non-production Salesforce environment and create a proxy to all other non-production environments.
- C. Install MuleSoft Composer in each of the non-production Salesforce environments.
- D. Use mocked data because non-production data is not available to MuleSoft Composer.

Answer: A

Explanation:

Create Connections: To test flows with data in multiple non-production environments, creating connections to each environment within the MuleSoft Composer UI is necessary. This allows the Composer to access and manipulate data across different environments, ensuring comprehensive testing.

Reference: MuleSoft Composer Connections

Installing Composer in Non-Production Environments: While installing Composer in each environment is technically possible, creating individual connections is more efficient and aligns with best practices.

Reference: Composer Setup and Configuration

Using Mocked Data: Mocked data can be useful for initial testing, but connecting to actual non-production environments provides more realistic test scenarios.

Reference: Testing with Mock Data

Proxy Setup: Creating a proxy to other environments is complex and unnecessary when Composer supports direct connections.

Reference: Proxy Configuration

NEW QUESTION # 27

What is the difference between Run and Debug modes in Flow Builder?

- A. Debug mode displays details for debugging the flow.
- B. Debug mode uses AI to fix any bugs in the flow.
- C. Run mode is only available for active flows.
- D. Run mode uses the latest version of the flow.

Answer: A

Explanation:

In Flow Builder, Run and Debug modes have distinct functionalities:

Run Mode:

Executes the flow as it is, allowing you to see the end-to-end execution based on the latest saved version.

Typically used to verify that the flow works as expected under normal conditions.

Debug Mode:

Provides detailed information for each step of the flow, including input and output data, and any errors encountered.

Useful for troubleshooting and identifying issues within the flow, allowing developers to understand how the flow executes and where

problems may arise.

Debug mode is specifically designed to aid in diagnosing and fixing issues by providing a granular view of the flow's execution.

NEW QUESTION # 28

Northern Trail Outfitters has deployed a MuleSoft RPA process to automate the extraction of sales data from CSV files. To integrate this RPA process with Sales Cloud, an action step is created that calls this RPA process in a MuleSoft Composer flow. Which next step must be added to the flow to make use of the RPA process results?

- A. Create Record action in Sales Cloud
- **B. Create or Update Record action in Sales Cloud**
- C. For Each loop
- D. If/Else block

Answer: B

Explanation:

To integrate an RPA process that extracts sales data from CSV files with Sales Cloud using MuleSoft Composer, you need to take the following steps:

Invoke RPA Process:

Create an action step in the MuleSoft Composer flow that calls the RPA process to extract the sales data from the CSV files.

Next Step - Create or Update Record:

After the RPA process completes and returns the extracted data, the next step in the flow should be to update Sales Cloud with the new information.

Use the Create or Update Record action to insert the new sales data into Sales Cloud. This action ensures that existing records are updated if they already exist, or new records are created if they don't.

This approach ensures that the results from the RPA process are correctly reflected in Sales Cloud.

NEW QUESTION # 29

Which type of integration project should be implemented with MuleSoft Composer?

- A. Long running workflows that require manual steps and approvals by users
- B. Automating UI interactions using image recognition
- **C. Data transformation from a source system to a target system by a non-technical user**
- D. Batch processing of larger-than-memory files with conditional logic within the batch steps

Answer: C

Explanation:

MuleSoft Composer is designed for business users to create integrations without deep technical knowledge. It is ideal for scenarios that involve:

Data Transformation and Integration:

Non-technical users can easily connect different systems, automate data transfers, and transform data from one system to another using a no-code interface.

MuleSoft Composer provides pre-built connectors and an intuitive interface to set up these integrations.

Simplified Automation:

The platform is optimized for creating straightforward, rule-based automations where complex coding is not required.

Therefore, automating data transformation tasks by a non-technical user fits perfectly with MuleSoft Composer's capabilities.
