Our professional experts are devoting themselves on the compiling and updating the exam materials and our services are ready to guide you 24/7 when you have any question.

## AZ-120:Planning and Administering Microsoft Azure for SAP Workloads Certification Path

AZ-120:Planning and Administering Microsoft Azure for SAP Workloads Exam is foundation level Certification.It is strongly recommended that aspirants for this exam have an Azure Administrator or Azure Architect certification, in addition to SAP HANA and Linux certifications. Anyone who is having keen interest and familiar with general Microsoft Azure for SAP Workloads concepts and the technologies. More than 85% of IT support roles require a good foundation of Microsoft Azure for SAP Workloads concepts. Aspirants should have some hands-on experience with SAP HANA, S/4HANA, SAP NetWeaver, SAP BW, OS Servers for SAP Applications and Databases, Azure Portal, ARM templates, operating systems, virtualization, cloud infrastructure, storage structures, high availability design, disaster recovery design, data protection concepts, and networking.

Microsoft AZ-120 Certification Exam is designed to test your proficiency in planning and administering Microsoft Azure for SAP Workloads. AZ-120 exam is intended for IT professionals who have experience in SAP workloads and Azure administration. Planning and Administering Microsoft Azure for SAP Workloads certification will demonstrate your expertise in deploying, managing, and monitoring SAP workloads on Azure.

## Microsoft Planning and Administering Microsoft Azure for SAP Workloads

## Sample Questions (Q177-Q182):

### NEW QUESTION # 177

You have an Azure subscription that contains a highly available SAP NetWeaver deployment. The deployment contains four virtual machines.

You need to monitor the NetWeaver deployment by using Azure Monitor for SAP Solutions. During the implementation of Azure Monitor for SAP Solutions, downtime of the deployment must be minimized.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

#### Answer:

Explanation:

- 1 - From the Azure portal, deploy the ...
- 2 - On each virtual machine, install node\_exporter.
- 3 - From the SAP GUI, connect to the SAP system..

### NEW QUESTION # 178

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy SAP HANA on Azure (Large Instances).

You need to back up the SAP HANA database to Azure.

Solution: You create a Recovery Services vault and a backup policy.

Does this meet the goal?

- A. Yes
- B. No

#### Answer: A

Explanation:

Backup architecture

\* The backup process begins by creating a Recovery services vault in Azure. This vault will be used to store the backups and recovery points created over time.

\* The Azure VM running SAP HANA server is registered with the vault, and the databases to be backed-up are discovered. To enable the Azure Backup service to discover databases, a preregistration script must be run on the HANA server as a root user.

\* This script creates AZUREWLBACKUPHANAUSER DB user and a corresponding key with the same name in hdbuserstore. Refer to the setting up permissions section to understand more about what the script does.

\* Azure Backup Service now installs the Azure Backup Plugin for HANA on the registered SAP HANA server.

\* The AZUREWLBACKUPHANAUSER DB user created by the preregistration script is used by the Azure Backup Plugin for HANA to perform all backup and restore operations. If you attempt to configure backup for SAP HANA DBs without running this script, you might receive the following error:

UserErrorHanaScriptNotRun.

\* To configure backup on the databases that are discovered, choose the required backup policy and enable backups.

\* Once the backup is configured, Azure Backup service sets up the Backint parameters at the DATABASE level on the protected SAP HANA server.

\* The Azure Backup Plugin for HANA maintains all the backup schedules and policy details. It triggers the scheduled backups and communicates with the HANA Backup Engine through the Backint APIs.

\* The HANA Backup Engine returns a Backint stream with the data to be backed up.

\* All the scheduled backups and on-demand backups (triggered from the Azure portal) that are either full or differential are initiated by the Azure Backup Plugin for HANA. However, log backups are managed and triggered by HANA Backup Engine itself.

### NEW QUESTION # 179

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation

Box 1: Yes

By moving much of Azure's software-defined networking stack off the CPUs and into FPGA-based SmartNICs, compute cycles are reclaimed by end user applications, putting less load on the VM, decreasing jitter and inconsistency in latency.

Box 2: Yes

Box 3: No

Accelerated Networking (AN) is generally available (GA) and widely available for Windows and the latest distributions of Linux

### NEW QUESTION # 180

You need to provide the Azure administrator with the values to complete the Azure Resource Manager template.

Which values should you provide for diskCount, StorageAccountType, and domainName? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation:

Box 1: 4

Scenario: the Azure Resource Manager template that will be used to provision the production application servers. Ensure that each production application server has four 1-TB data disks.

Box 2: Standard\_LRS

Scenario: Minimize costs whenever possible.

Box 3: contoso.onmicrosoft.com

The network contains an on-premises Active Directory domain named ad.contoso.com.

The Initial domain: The default domain (onmicrosoft.com) in the Azure AD Tenant. For example, contoso.

onmicrosoft.com

### NEW QUESTION # 181

You have an SAP production landscape that uses SAP HANA databases.

You configure a metric alert for the primary HANA server as shown in the following exhibit.

#### Answer:

Explanation:

Explanation

Graphical user interface, text, application, email Description automatically generated

Box 1: No

The period is 15 minutes. Only alerts or emails will be sent.

Box 2: Yes

Box 3: Yes
