높은 통과율 CTFL-AT시험대비 최신버전 문제 인증시험공부

ISQI CTFL-AT 시험 기출문제를 애타게 찾고 계시나요? Itcertkr의 ISQI CTFL-AT덤프는ISQI CTFL-AT최신 시험의 기출문제뿐만아니라 정답도 표기되어 있고 저희 전문가들의 예상문제도 포함되어있어 한방에 응시자들의 고민을 해결해드립니다. 구매후 시험문제가 변경되면 덤프도 시험문제변경에 따라 업데이트하여 무료로 제공해드립니다.

최신 Agile Tester CTFL-AT 무료샘플문제 (Q13-Q18):

질문 # 13

You are working in a team preparing a bank loan application. Your task is the preparation of acceptance tests for the following user story:

"If a customer needs a loan for less than 50,000 Euros and they have made repayments regularly (without any delay) and the customer's monthly income is more than 3000 Euros for the last year, THEN the bank will accept the loan request; in other cases, the bank will not accept the request. A customer assistant is responsible for preparing data for approval but the approval is done by the bank manager." Which of the following test cases can be treated as acceptance test criteria for the above user story?

- 1) As a customer assistant I can log in to the system and check the history of the customer account for the last year.
- 2) As a customer assistant I can log in to the system and check the history of the customer debts and repayments.
- 3) As a customer assistant I can log in to the system and change my password.
- 4) As a bank manager I can log in to the system and receive the information of all requests waiting for approval.
- 5) As a bank manager I can log in to the system and decide whether to approve a loan for a customer.
- 6) As a bank manager I can log in to the system within 10 seconds.

- A. Acceptance test criteria are 1, 3, 4 and 5
- B. Acceptance test criteria are 1, 2, 3 and 6

- C. Acceptance test criteria are 2, 4, 5 and 6
- D. Acceptance test criteria are 1, 2, 4 and 5

정답: D

설명:

Acceptance test criteria are the conditions that a user story must satisfy to be accepted by the customer or the stakeholder. They are usually derived from the user story and its acceptance scenarios, and they should cover the functional and non-functional requirements of the user story. Acceptance test criteria should be clear, concise, testable, and agreed upon by the team and the customer or the stakeholder.

In this case, the user story describes the business rule for approving a loan request based on the customer's income, repayment history, and loan amount. The user story also specifies the roles of the customer assistant and the bank manager in the process. Therefore, the acceptance test criteria should verify that the user story is implemented correctly and that the system behaves as expected for different scenarios and inputs.

The following test cases can be treated as acceptance test criteria for the above user story:

- * As a customer assistant I can log in to the system and check the history of the customer account for the last year. This test case verifies that the customer assistant can access the system and view the customer's income information, which is one of the factors for approving the loan request.
- * As a customer assistant I can log in to the system and check the history of the customer debts and repayments. This test case verifies that the customer assistant can access the system and view the customer's repayment history, which is another factor for approving the loan request.
- * As a bank manager I can log in to the system and receive the information of all requests waiting for approval. This test case verifies that the bank manager can access the system and see the list of loan requests that have been prepared by the customer assistant, and that the system provides the necessary information for each request.
- * As a bank manager I can log in to the system and decide whether to approve a loan for a customer. This test case verifies that the bank manager can access the system and perform the approval action for a loan request, and that the system applies the business rule correctly and updates the status of the request accordingly.

The following test cases cannot be treated as acceptance test criteria for the above user story:

- * As a customer assistant I can log in to the system and change my password. This test case is not related to the user story, as it does not verify any of the functional or non-functional requirements of the user story. It is a generic test case that applies to any user of the system, not specific to the customer assistant role or the loan approval process.
- * As a bank manager I can log in to the system within 10 seconds. This test case is not related to the user story, as it does not verify any of the functional or non-functional requirements of the user story. It is a performance test case that applies to any user of the system, not specific to the bank manager role or the loan approval process.

질문 # 14

Which of the following is NOT a typical task performed by the tester within an Agile team?

- A. Working with business stakeholders to clarify requirements.
- B. Ensuring the appropriate testing tasks are scheduled during iteration planning.
- C. Suggesting improvements in team retrospectives.
- D. Ensuring all project status meetings are held according to the plan.

정답: D

설명:

Explanation

The tester within an Agile team is not responsible for ensuring all project status meetings are held according to the plan. This is typically a task for the Scrum Master, who facilitates the meetings and ensures that the team follows the Agile principles and practices. The tester within an Agile team is responsible for ensuring the appropriate testing tasks are scheduled during iteration planning, suggesting improvements in team retrospectives, and working with business stakeholders to clarify requirements. These are all tasks that contribute to the quality of the software and the testing process, as well as the collaboration and communication within the team and with the customers. 질문 # 15

In a sprint planning, the product owner presents a user story written on a card. The team starts having a discussion with the product owner to get an understanding on how the software should work.

The user story written on the card is:

"As a customer, I want to subscribe to the mailing list so that I can receive the latest deal in an email." By applying the 3C concept, which ONE of the following statements is CORRECT?

- A. The conversation is not required and the team should start developing.
- B. The card should contain requirements not the user story.
- **C. Conversation should include the acceptance criteria discussion.**
- D. Product owner has written a user story and confirmation is not needed.

정답: C

설명:

Explanation

The 3C concept of user stories consists of three elements: card, conversation, and confirmation¹². The card is a written description of the user story that captures the essence of the feature or functionality from the user's perspective. The conversation is a dialogue between the product owner and the development team to clarify the details, assumptions, and expectations of the user story. The confirmation is a set of criteria or tests that verify that the user story is implemented correctly and meets the user's needs¹². Therefore, by applying the 3C concept, the correct statement is A, as the conversation should include the acceptance criteria discussion. This will help the team to understand the scope, priority, and value of the user story, as well as the conditions of satisfaction that the product owner expects¹². The other statements are incorrect, as they violate the 3C concept. Statement B is wrong, as the card should contain the user story, not the requirements. The user story is a brief and informal way of expressing the user's goal and benefit, while the requirements are more detailed and specific descriptions of how the software should work. The requirements can be added later as part of the conversation or confirmation¹². Statement C is wrong, as the product owner has written a user story, but confirmation is still needed. The confirmation is a vital part of the 3C concept, as it ensures that the user story is testable, measurable, and verifiable. The confirmation also helps to avoid ambiguity, misunderstanding, or disagreement between the product owner and the development team¹². Statement D is wrong, as the conversation is required and the team should not start developing without it. The conversation is an essential part of the 3C concept, as it allows the team to ask questions, share ideas, and collaborate with the product owner to refine the user story and reach a shared understanding. The conversation also helps to identify the dependencies, risks, and assumptions that may affect the implementation of the user story¹². References: ISTQB Foundation Level Agile Tester Syllabus¹, Section 2.2.1, page 16-17; Effective User Stories - 3C's and INVEST Guide², Section The 3 C's (Card, Conversation, Confirmation) of User Stories.

질문 # 16

Which of the following is the BEST way for a test team to keep its independence when working in an Agile development environment?

- A. Locate the team that develops the test automation framework in a different location to the Agile development team.
- B. Share the Test Strategy with the Agile development team, but not the details of the Test Cases.
- C. Co-locate only some of the testers with the Agile development team, while the rest of the testers are in a different location.
- **D. Assign testers to be members of the Agile team, but ensure the testers report to a different manager than the developers.**

정답: D

질문 # 17

You have been asked to execute an exploratory testing session on Park & Ride system. The test charter has been titled as "Buy a bus ticket". As a result, a number of defects were reported, the titles of which are listed below.

Which defect is out of scope for the given test charter?

- **A. Payment for parking ticket is restricted to cash only (no credit card supported).**
- B. Failed to buy a bus ticket after 18:00.
- C. Failed to buy a bus ticket when the network connection to the Central System is down.
- D. Price for a bus ticket was calculated incorrectly.

정답: A

설명:

Explanation

The test charter for the exploratory testing session is focused on buying a bus ticket, not a parking ticket. Therefore, any defect related to the payment for parking ticket is out of scope for the given test charter. The other defects are related to the functionality, usability, or reliability of buying a bus ticket, which are in scope for the test charter.
