

NCP-CI-Azure PrüfungGuide, Nutanix NCP-CI-Azure Zertifikat - Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7)

Übrigens, Sie können die vollständige Version der ZertSoft NCP-CI-Azure Prüfungsfragen aus dem Cloud-Speicher herunterladen: <https://drive.google.com/open?id=1rCnLU14ot5xsU2qzUIQUd2JC-LHISMe7>

Sie brauchen nicht so viel Geld und Zeit, nur ungefähr 30 Stunden spezielle Ausbildung, dann können Sie ganz einfach die Nutanix NCP-CI-Azure Zertifizierungsprüfung nur einmalig bestehen. ZertSoft bietet Ihnen die Prüfungsthemen, deren Ähnlichkeit mit den realen Prüfungsübungen sehr groß ist.

Nutanix NCP-CI-Azure Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> Managing an NC2 on Azure Environment: This section relates to skills in identifying management tasks for nodes and clusters. Candidates will monitor cluster health and cloud resource performance, ensuring that all components function efficiently. Understanding these management tasks is vital for maintaining operational integrity in a hybrid cloud environment.
Thema 2	<ul style="list-style-type: none"> Deploying an NC2 on Azure Environment: This section assesses the skills of Nutanix Cloud Operators and focuses on deploying the cloud cluster within the Azure environment. Candidates will learn to configure cloud provider networking effectively, ensuring that all necessary resources are correctly set up for deployment.
Thema 3	<ul style="list-style-type: none"> Configuring an NC2 on Azure Environment: This section evaluates the skills of IT Administrators and emphasizes modifying cloud networking security to protect resources. Candidates will configure Nutanix networking settings and troubleshoot connectivity issues to ensure seamless communication within the cloud environment.
Thema 4	<ul style="list-style-type: none"> Planning an NC2 on Azure Deployment: This section of the exam measures the skills of IT Administrators and covers the preparation of the Azure cloud environment, including determining the appropriate Azure account and node types. It also involves subscribing to the NC2 service, which requires knowledge of authentication methods and organization naming conventions. Additionally, candidates must determine implementation requirements by evaluating deployment use cases and redundancy needs. Identifying networking requirements is crucial, focusing on connectivity options like VPN and CIDR ranges.

NCP-CI-Azure Übungsmaterialien, NCP-CI-Azure Examengine

Seit langem bieten wir ZertSoft vielfältige neueste Prüfungsunterlagen zur Nutanix NCP-CI-Azure Zertifizierungsprüfung. Zum Beispiel sind Nutanix NCP-CI-Azure Dumps von ZertSoft laut der neuesten IT-Zertifizierungsprüfung geschaffen. Wir können Ihnen die neuesten Informationen über die Nutanix NCP-CI-Azure Prüfungen anbieten. Die Unterlagen beinhalten die veränderten Informationen und die neue Prüfungsfragensformen. So wenn Sie IT-Zertifizierungsprüfung ablegen wollen, sollen Sie am besten die Unterlagen von ZertSoft. Damit können Sie sich besser auf die Nutanix NCP-CI-Azure Prüfungen vorbereiten.

Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) NCP-CI-Azure Prüfungsfragen mit Lösungen (Q17-Q22):

17. Frage

An administrator seeks to ensure that the newly-created NC2 organization named Finance can only deploy clusters into certain cloud regions.

Which action should the administrator take to do this?

- A. Specify allowed regions when configuring a cloud account for the Finance NC2 organization.
- B. Configure permissions in cloud accounts to restrict access to certain regions.
- C. Open a support ticket with Nutanix to whitelist the allowed regions for the Finance N
- D. Configure RBAC roles on the Finance NC2 organization to allow access to regions.

Antwort: A

Begründung:

Cloud Account Configuration: When setting up a cloud account for the NC2 organization, the administrator can specify which regions are available for deploying clusters.

Restricting Regions: This ensures that the Finance organization can only deploy clusters into the designated regions, complying with organizational policies and requirements.

18. Frage

An administrator manager a virtual desktop environment running on an NC2 cluster in Azure.

The desktop running on the cluster need to contact resources on-premises through the ExpressRoute that has been setup. The save on bandwidth from the on-premises environment to Azure, the administrator wants the desktops to access the internet through an Azure NAT Gateway.

Which configuration will best accomplish this task?

- A. Set the default route of 0.0.0.0/0 for the Nutanix User VPC pointing to the external-NAT network. Set a route to the on-premises subnet for the Nutanix User VPC pointing to the external-NAT network.
- B. Set the default route of 0.0.0.0/0 for the Nutanix User VPC pointing to the external-No-NAT network.
- C. Set the default route of 0.0.0.0/0 for the Nutanix User VPC pointing to the external-NAT network. Set a route to the on-premises subnet for the Nutanix User VPC pointing to the external-No-NAT network.
- D. Assign all desktops Floating IPs and use an external-NAT network in the transit VPC. Set the default route of 0.0.0.0/0 for the Nutanix User VPC pointing to the external-NAT network.

Antwort: C

Begründung:

* Default Route for Internet Traffic:By setting the default route of 0.0.0.0/0 for the Nutanix User VPC pointing to the external-NAT network, all internet-bound traffic from the desktops will be routed through the Azure NAT Gateway, conserving bandwidth on the ExpressRoute connection.

* On-Premises Route:Setting a specific route to the on-premises subnet for the Nutanix User VPC pointing to the external-No-NAT network ensures that traffic destined for on-premises resources bypasses the NAT Gateway and utilizes the ExpressRoute connection, optimizing the use of network paths.

References:

- * Azure NAT Gateway Documentation

19. Frage

Which entity should be contacted for cloud hardware support (EC2 instances, VPC, etc) related to NC2?

- A. Nutanix
- **B. Public Cloud Vendor**
- C. Partner
- D. Internal IT Operations team

Antwort: B

Begründung:

* Cloud Hardware Support: For issues related to cloud hardware, such as EC2 instances or VPC configurations, the responsible entity is typically the public cloud vendor.

* Nutanix Responsibility: Nutanix manages the software layer and integration aspects of the NC2 service, but the underlying hardware support is managed by the cloud provider (e.g., AWS, Azure).

* Support Process:

* Public Cloud Vendor: Contact the public cloud vendor for issues directly related to the hardware, as they own and manage the physical infrastructure.

* Nutanix: For software and configuration issues specific to the NC2 service, contact Nutanix support.

* Conclusion: For cloud hardware-related support, the appropriate contact is the public cloud vendor.

20. Frage

An administrator is tasked to identify the firewall requirement and submit the port request to the requirement team before the clusters deployment.

Which requirement should the administrator ensure is implemented on the corporate firewall?

- A. Allow uni-directional internet Control Message Protocol (ICMP) traffic between the CVMs, Prism Element, and Prism Central.
- B. ICMP and connectivity can be disabled between the CVMs, Prism Element, and Prism Central
- C. ICMP can be disabled but the connectivity should be enabled between the CVMs, Prism Element, and Prism Central.
- **D. Allow bi-directional Internet Control Message Protocol (ICMP) traffic between the CVMs, Prism Element, and Prism Central.**

Antwort: D

Begründung:

* ICMP Traffic: ICMP is essential for network diagnostics and troubleshooting, such as ping and traceroute, which help in monitoring the connectivity and health of the network.

* Bi-Directional Traffic: Allowing bi-directional ICMP traffic ensures that all nodes (CVMs, Prism Element, and Prism Central) can both send and receive diagnostic messages, which is crucial for maintaining proper communication and network stability.

- * Corporate Firewall Configuration Guidelines

21. Frage

Native Azure VMs exist in a subnet (10.20.80.0/20) in the Prism Central VNet that need access to the workload running on the Nutanix User.

What needs to be modified to allow access from the native Azure VMs to the workloads running in the Nutanix User VPC?

- A. Adjust the Inbound Network Security Group on the Flow Gateway VM External NIC to allow traffic 10.20.80.0/20.

- B. Remove the ERP value on the transit VPC and Nutanix User VPC.
- **C. Adjust the Inbound Network Security Group on the Flow Gateway VM Internal NIC to allow traffic 102030,0/20.**
- D. Change the ERP value to the the subnet range of the native Azure VMs (10.20.80.0/20) on the Transit VPC and the Nutanix User VPC.

Antwort: C

Begründung:

To allow access from the native Azure VMs to the workloads running in the Nutanix User VPC, the administrator needs to:

- * Adjust the Inbound Network Security Group (NSG) on the Flow Gateway VM's Internal NIC.
- * Specifically, allow traffic from the subnet range of the native Azure VMs (10.20.80.0/20) in the Inbound rules of the NSG associated with the Internal NIC of the Flow Gateway VM.

This configuration change permits the desired network traffic, ensuring that the native Azure VMs can communicate with the workloads in the Nutanix User VPC. References
