

Salesforce Integration-Architect Exam Questions | Reduce Your Fear in Final Exam

What's more, part of that itPass4sure Integration-Architect dumps now are free: <https://drive.google.com/open?id=1PDfVndx8z5wvtQ1IIIJ36OLE5a017Xo>

Many people may have different ways and focus of study to pass Integration-Architect exam in the different time intervals, but we will find that in real life, can take quite a long time to learn Integration-Architect learning questions to be extremely difficult. You may be taken up with all kind of affairs, and sometimes you have to put down something and deal with the other matters for the latter is more urgent and need to be done immediately. With the help of our Integration-Architect training guide, your dream won't be delayed anymore.

At itPass4sure, we are proud to offer you actual Integration-Architect exam questions in our Salesforce Integration-Architect practice exam material. This actual study material has been checked and approved by leading professionals in the field. A team of over 90,000 experts and professionals have collaborated to design the Salesforce Certified Integration Architect (Integration-Architect) exam material, ensuring that you receive both theoretical knowledge and practical insights to excel in the Salesforce Certified Integration Architect exam.

Integration-Architect Certification Sample Questions, Integration-Architect Related Exams

Keep making progress is a very good thing for all people. If you try your best to improve yourself continuously, you will that you will harvest a lot, including money, happiness and a good job and so on. The Integration-Architect preparation exam from our company will help you keep making progress. Choosing our Integration-Architect study material, you will find that it will be very easy for you to overcome your shortcomings and become a persistent person. If you decide to buy our Integration-Architect study questions, you can get the chance that you will pass your Integration-Architect exam and get the certification successfully in a short time.

Salesforce Certified Integration Architect Sample Questions (Q125-Q130):

NEW QUESTION # 125

Northern Trail Outfitters (NTO) has recently changed their Corporate Security Guidelines. The guidelines require that all cloud applications pass through a secure firewall before accessing on-premise resources. NTO is evaluating middleware solutions to integrate cloud applications with on-premise resources and services.

What are two considerations an Integration Architect should evaluate before choosing a middleware solution?

Choose 2 answers

- A. The middleware solution is capable of establishing a secure API gateway between cloud applications and on-premise resources.
- B. The middleware solution enforces the OAuth security protocol.
- C. An API gateway component is deployable behind a Demilitarized Zone (DMZ) or perimeter network.
- D. The middleware solution is able to interface directly with databases via an ODBC connection string.

Answer: A,C

Explanation:

Explanation

An API gateway is a component that acts as a single point of entry for all cloud applications to access on-premise resources and services. It can provide security, routing, transformation, and other features to facilitate integration. An API gateway component should be deployable behind a DMZ or perimeter network, which is a subnetwork that separates the internal network from the external network and provides an additional layer of security. The middleware solution should also be capable of establishing a secure API gateway between cloud applications and on-premise resources, which may involve using protocols such as HTTPS, SSL/TLS, or VPN. The OAuth security protocol is not a requirement for choosing a middleware solution, as it is a standard for authorizing access to resources on behalf of a user. The middleware solution's ability to interface directly with databases via an ODBC connection string is also not a requirement, as it is a specific feature that may or may not be needed depending on the integration scenario. NEW QUESTION # 126

A large consumer goods manufacturer operating in multiple countries is planning to implement Salesforce for its sales and support operations globally. The Manufacturer has the following security requirements:

- * Internal users from each country have to be authenticated with their local active directory.
- * Customers can create their own login or use Google login.
- * Partners have to be authenticated through a central system which is to be determined.
- * Internal users will have access to the central Enterprise Resource Planning (ERP) with their credentials maintained in the ERP system.
- * Additional internal systems will be integrated with Salesforce for sales and support business processes.

Which requirement should the integration architect evaluate while designing the integration needs of this project?

- A. Evaluate Salesforce native authentication mechanism for all users including customers and partners.
- B. Consider a third-party single sign-on (SSO) solution supporting all user authentication including customer and partner.
- C. Evaluate the build of a custom authentication mechanism for users in each country and support for customers and partners.

Answer: B

Explanation:

Managing identity across a global enterprise with diverse user personas (Employees, Customers, Partners) requires a centralized Identity and Access Management (IAM) strategy. In a landscape involving multiple local Active Directories, social logins (Google), and a central ERP system, attempting to manage authentication natively within Salesforce or through custom-built local silos would result in high technical debt and security vulnerabilities.

The architect should recommend a third-party Single Sign-On (SSO) solution, acting as a central Identity Provider (IdP). This IdP serves as the orchestration layer for all authentication requests.

* For Internal Users: The IdP can federate with the various local Active Directories, allowing users to log in with their existing corporate credentials.

* For Customers: The IdP can handle "Social Sign-On" (OpenID Connect) with Google and manage self-registration.

* For Partners: It provides the "central system" required for their authentication.

By using a central SSO solution, Salesforce acts as a Service Provider (SP). When a user attempts to access Salesforce, the request is redirected to the IdP via the SAML 2.0 or OpenID Connect protocol. Once the IdP validates the user against the appropriate backend (AD, Google, or its own directory), it sends a secure assertion back to Salesforce to grant access.

Furthermore, this central IdP can facilitate access to the ERP system and other internal systems. If these systems support SAML, the same SSO session used for Salesforce can be extended to them, providing a true single sign-on experience. This architecture centralizes security auditing, simplifies user de-provisioning (the

"kill switch" effect), and ensures a consistent user experience across the global manufacturing landscape. Implementing a third-party IdP is the industry-standard approach for complex integrations where security, scalability, and multi-protocol support are primary requirements.

NEW QUESTION # 127

A customer imports data from an external system into Salesforce using Bulk API. These jobs have batch sizes of 2000 and are run in parallel mode. The batch fails frequently with the error "Max CPU time exceeded". A smaller batch size will fix this error.

Which two options should be considered when using a smaller batch size?

Choose 2 answers

- A. Smaller batch size may exceed the concurrent API request limits.
- **B. Smaller batch size may increase time required to execute bulk jobs.**
- C. Smaller batch size can trigger "Too many concurrent batches" error.
- **D. Smaller batch size may cause record-locking errors.**

Answer: B,D

Explanation:

Explanation

The error "Max CPU time exceeded" occurs when a batch of records takes more than 10 minutes to process in the Bulk API. Using a smaller batch size can reduce the processing time and avoid this error. However, there are some trade-offs to consider when using a smaller batch size, such as:

Answer A is valid because a smaller batch size may cause record-locking errors if multiple batches try to update the same records or records that are related by a lookup or master-detail relationship. This can result in concurrency issues and data inconsistency¹. Answer B is valid because a smaller batch size may increase the time required to execute bulk jobs, as more batches need to be created and processed sequentially. This can affect the performance and efficiency of the integration¹. Answer C is not valid because a smaller batch size may not exceed the concurrent API request limits, as the Bulk API does not count against the concurrent request limit. The Bulk API has its own limit on the number of batches that can be queued or in progress, which is 5,000 per rolling 24-hour period². Answer D is not valid because a smaller batch size can trigger "Too many concurrent batches" error only if the number of batches exceeds the limit of 5,000 per rolling 24-hour period. This error is not related to the parallel mode of the Bulk API, which allows up to 10 batches to be processed simultaneously.

NEW QUESTION # 128

A conglomerate is designing a Lightning Web Component (LWC) to display transactions aggregated from different sources. Their current system landscape is as follows:

1. Transactions are created at any time through their various on-premise and cloud-based systems.
2. All necessary transactions are replicated to a custom Transaction object in Salesforce. It is updated periodically so it only has a subset of the necessary transactions between updates.
3. Middleware supports publish-subscribe interactions and provides RESTful Enterprise APIs that can retrieve transactions from on-premise and cloud-based systems.

The company wants to address a usability concern regarding incomplete data displayed on the LWC component. What should the Integration Architect specify so the LWC will be able to display all the required transactions?

- A. Let the Lightning Data Service with an @wire adapter display new values when the custom object records change.
- B. Use the Continuation class to call the Enterprise APIs and then process the response in a callback method.
- C. Publish a Platform Event, have the middleware subscribe and update the custom object on receipt of Platform Event.
- **D. Call the Enterprise APIs directly from the LWC's JavaScript code and redisplay the LWC on receipt of the API response.**

Answer: D

NEW QUESTION # 129

Northern Trail Outfitters uses a custom Java application to display code coverage and test results for all enterprise applications.

Which Salesforce API should an integration architect use to include Salesforce in this application?

- A. Analytics REST API
- **B. Tooling API**
- C. Metadata API

Answer: B

Explanation:

The Tooling API is specifically designed for developer-centric tools that need fine-grained access to Salesforce metadata and runtime information. It exposes specialized objects like ApexCodeCoverage, ApexCodeCoverageAggregate, and ApexTestResult. These objects allow external applications to query the results of test runs and specific line-by-line coverage metrics. While the Metadata API (Option A) is used for deployments, it does not provide the same granular query access to test execution results. The Tooling API is the industry standard for integrating Salesforce into enterprise CI/CD pipelines and quality dashboards.

NEW QUESTION # 130

.....

Our Salesforce Integration-Architect qualification test help improve your technical skills and more importantly, helping you build up confidence to fight for a bright future in tough working environment. Our professional experts devote plenty of time and energy to developing the Integration-Architect Study Tool. You can trust us and let us be your honest cooperators in your future development. Here are several advantages about our Salesforce Integration-Architect exam for your reference.

Integration-Architect Certification Sample Questions: <https://www.itpass4sure.com/Integration-Architect-practice-exam.html>

Besides, those possessing the Integration-Architect certification are more likely to receive higher salaries, Our Integration-Architect exam preparation will protect the interests of every user, Give both of us a chance, our Integration-Architect guide torrent will help you own certifications 100% indeed, Our company employs experts in many fields to write Integration-Architect study guide, so you can rest assured of the quality of our learning materials, itPass4sure Integration-Architect Certification Sample Questions is a trusted resource for thousands of customers just like you.

Learn how to use the Joomla, Create strong passwords and regularly update them for best security, Besides, those possessing the Integration-Architect Certification are more likely to receive higher salaries.

Download Updated Salesforce Integration-Architect Exam Questions and Start Exam Preparation

Our Integration-Architect exam preparation will protect the interests of every user, Give both of us a chance, our Integration-Architect guide torrent will help you own certifications 100% indeed.

Our company employs experts in many fields to write Integration-Architect study guide, so you can rest assured of the quality of our learning materials, itPass4sure is a trusted resource for thousands of customers just like you.
