## High-quality Juniper JN0-224 Exam Bible Offer You The Best Exam Format | Automation and DevOps, Associate (JNCIA-DevOps)

The Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) dumps PDF file can be used from any location and at any time. Furthermore, you can take print of Juniper Questions PDF to do an off-screen study. The web-based JN0-224 practice exam can be taken via the internet from any browser like Firefox, Safari, Opera, MS Edge, Internet Explorer, and Chrome. You don't need to install any excessive plugins and software to take this Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) practice test.

## Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q45-Q50):

### NEW QUESTION # 45

Which two statements about Junos automation are correct? (Choose two.)

- A. Junos automation allows for device provisioning through the console port.
- B. The Junos REST API client is off-box.
- C. The Junos REST API client is on-box.
- D. Junos automation does not allow for device provisioning through the console port.

Answer: A,C

### NEW QUESTION # 46

Exhibit.

Referring to the exhibit, which two statements about the script are correct? (Choose two.)

- A. The script prints interface information for each interface name.
- **B. The script retrieves the interface configuration in JSON.**
- C. The script retrieves the interface configuration in XML.
- **D. The script prints the name of each configured interface.**

**Answer: B,D**

### NEW QUESTION # 47

Which two statements are true about an XML schema document? (Choose two.)

- **A. It is formatted as an XSD file.**
- B. It is formatted as an XLT file.
- **C. It is an authoritative source for operational and configuration XML.**
- D. It cannot be examined in the Junos CLI.

**Answer: A,C**

Explanation:

An XML schema document (XSD) is a key component in defining the structure and constraints of XML data used in various applications, including Junos:

Authoritative Source (C): An XML schema document serves as the authoritative definition of the structure, content, and semantics of XML documents. It ensures that the XML data adheres to specific rules and formats, which is essential for both operational and configuration XML.

XSD Format (D): XML schema documents are typically written in the XSD (XML Schema Definition) format, which provides a formal description of the XML document's structure.

Option A is incorrect because XML schemas are not formatted as XLT files (which are related to XSLT transformations), and Option B is incorrect because XML schemas can indeed be examined in the Junos CLI using appropriate commands.

Reference:

W3C XML Schema Definition Language (XSD) Documentation: Provides comprehensive information on the XSD format.

Juniper Networks Documentation: Discusses the role of XML schemas in managing Junos configurations.

### NEW QUESTION # 48

Which statement about the NETCONF content layer is true?

- A. It uses JSON for RPC request and response payloads.
- B. It uses HTML for RPC request and response payloads.
- **C. It uses XML for RPC request and response payloads.**
- D. It uses YAML for RPC request and response payloads.

**Answer: C**

Explanation:

The NETCONF protocol, used for network management, utilizes XML for encoding the RPC (Remote Procedure Call) requests and responses. XML is chosen because of its flexibility and ability to represent hierarchical data structures, making it well-suited for representing network configurations and states.

Option B is correct because XML is the standard format used for NETCONF RPC payloads.

Options A (YAML), C (JSON), and D (HTML) are incorrect because these formats are not used by NETCONF for its RPC payloads.

Supporting Reference:

RFC 6241 - NETCONF Protocol: This RFC describes the use of XML for encoding NETCONF messages.

### NEW QUESTION # 49

What is the correct Python script syntax to prompt for input?

- A. `hostIP = input("Device IP address: ")`
- B. `hostIP = input{Device IP address: }`
- C. `input("Device IP address: ") = hostIP`
- D. `hostIP = input"Device IP address: "`

**Answer: A**

Explanation:

In Python, the correct syntax to prompt the user for input and store that input in a variable is:

`input(prompt)`: The `input()` function is used to take input from the user. The string provided as an argument (inside the parentheses) is displayed as a prompt to the user. The input provided by the user is returned as a string and can be stored in a variable.

Example:

```
hostIP = input("Device IP address: ")
```

In this example, "Device IP address: " is the prompt displayed to the user, and the user's input will be stored in the variable `hostIP`.

Options B, C, and D are syntactically incorrect in Python.

Reference:

Python Official Documentation: Describes the use of the `input()` function for getting user input.

Python Tutorials: Various tutorials demonstrate how to properly use the `input()` function in scripts.

## NEW QUESTION # 50

.....

The pass rate is 98.95% for the JN0-224 exam torrent, and you can pass the exam if you choose us. The JN0-224 exam dumps we recommend to you are the latest information we have, with that you can know the information of the exam center timely. Furthermore, with skilled professionals to revise the JN0-224 Questions and answers, the quality is high. And we offer you free update for 365 days, therefore you can get update version timely, and the update version will be sent to your email address automatically.
