## CS0-003 Latest Test Format, CS0-003 VCE Exam Simulator

In the process of using the CS0-003 study materials, once users have any questions about our study materials, the user can directly by E-mail us, our products have a dedicated customer service staff to answer for the user, they are 24 hours service for you, we are very welcome to contact us by E-mail and put forward valuable opinion for us. Our CS0-003 Study Materials already have many different kinds of learning materials, users may be confused about the choice, what is the most suitable CS0-003 study materials? Believe that users will get the most satisfactory answer after consultation.

## CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q100-Q105):

### NEW QUESTION # 100

Which of the following threat actors is most likely to target a company due to its questionable environmental policies?

- A. Organized crime
- **B. Hactivist**
- C. Nation-state
- D. Lone wolf

**Answer: B**

Explanation:

Hacktivists are threat actors who use cyberattacks to promote a social or political cause, such as environmentalism, human rights, or democracy. They may target companies that they perceive as violating their values or harming the public interest. Hacktivists often use techniques such as defacing websites, launching denial-of-service attacks, or leaking sensitive data to expose or embarrass their targets.

#### **NEW QUESTION # 101**

To comply with regulatory requirements, the Chief Executive Officer (CEO) must lead the company through simulations to find which steps are missing in emergency situations or incident processes. Which of the following should the CEO do?

- A. Leverage the appropriate playbook.
- **B. Perform a tabletop exercise.**
- C. Implement the incident response plan.
- D. Develop a business continuity plan.

**Answer: B**

Explanation:

A tabletop exercise allows executives, including the CEO, to walk through emergency or incident scenarios step by step. This type of simulation reveals gaps in processes and ensures leadership understands and can validate the organization's response procedures.

#### **NEW QUESTION # 102**

Which of the following best describe the external requirements that are imposed for incident management communication? (Choose two).

- **A. Framework guidelines**
- B. Defined SLAs regarding services
- C. Law enforcement involvement
- D. Transparency to stockholders
- **E. Compliance with regulatory requirements**
- F. Industry advocacy group participation

**Answer: A,E**

#### **NEW QUESTION # 103**

A cybersecurity analyst is reviewing SIEM logs and observes consistent requests originating from an internal host to a blocklisted external server. Which of the following best describes the activity that is taking place?

- A. Scanning
- B. Data exfiltration
- **C. Beaconsing**
- D. Rogue device

**Answer: C**

Explanation:

Beaconsing is the best term to describe the activity that is taking place, as it refers to the periodic communication between an infected host and a blocklisted external server. Beaconsing is a common technique used by malware to establish a connection with a command-and-control (C2) server, which can provide instructions, updates, or exfiltration capabilities to the malware. Beaconsing can vary in frequency, duration, and payload, depending on the type and sophistication of the malware. The other terms are not as accurate as beaconsing, as they describe different aspects of malicious activity. Data exfiltration is the unauthorized transfer of data from a compromised system to an external destination, such as a C2 server or a cloud storage service. Data exfiltration can be a goal or a consequence of malware infection, but it does not necessarily involve blocklisted servers or consistent requests. Rogue device is a device that is connected to a network without authorization or proper security controls. Rogue devices can pose a security risk, as they can introduce malware, bypass firewalls, or access sensitive data. However, rogue devices are not necessarily

infected with malware or communicating with blocklisted servers. Scanning is the process of probing a network or a system for vulnerabilities, open ports, services, or other information. Scanning can be performed by legitimate administrators or malicious actors, depending on the intent and authorization. Scanning does not imply consistent requests or blocklisted servers, as it can target any network or system.

#### NEW QUESTION # 104

A company's legal and accounting teams have decided it would be more cost-effective to offload the risks of data storage to a third party. The IT management team has decided to implement a cloud model and has asked the security team for recommendations. Which of the following will allow all data to be kept on the third-party network?

- A. SaaS
- B. FaaS
- C. VDI
- **D. CASB**

**Answer: D**

Explanation:

The question isn't asking which cloud model is to be used. It's asking which of the following choices will ALLOW (give permission, authorization, unhindered access) to keep ALL DATA (could be PII or other sensitive data) on THIRD-PARTY NETWORK (Cloud Service Provider's Network). Assuming the IT Management team has chosen SaaS as their cloud model, this doesn't mention how the data will be monitored, secured and other requirements to ensure the company is within compliance. What if the cloud provider is located in a location that doesn't allow specific data to be stored in that location? With a CASB deployed either locally or within the cloud the security team would be able to ensure policies are still enforced, monitor user activity, maintain logs, etc. This means if you are in the US and for reasons you have data that contains PII on a citizen from another country that doesn't allow the US to maintain or collect that data, the CASB would be able to prevent that data from being stored. Staying in compliance and providing proper threat management allows all data to be kept on a third part network.

#### NEW QUESTION # 105

.....

We strongly recommend using our CompTIA Cybersecurity Analyst (CySA+) Certification Exam (CS0-003) exam dumps to prepare for the CompTIA CS0-003 certification. It is the best way to ensure success. With our CompTIA CS0-003 practice questions, you can get the most out of your studying and maximize your chances of passing your CompTIA CS0-003 Exam. DumpsReview CompTIA CS0-003 practice test DumpsReview is the answer if you want to score higher in the CS0-003 exam and achieve your academic goals.
