## CIS-Discovery Exam Course | Relevant CIS-Discovery Answers

Our experts have experience of the exam for over ten years. So our CIS-Discovery practice materials are their masterpiece full of professional knowledge and sophistication to cope with the CIS-Discovery exam. They have sublime devotion to their career just like you, and make progress ceaselessly. By keeping close eyes on the current changes in this field, they make new updates of CIS-Discovery Study Guide constantly and when there is any new, we will keep you notified to offer help more carefully.

ServiceNow CIS-Discovery certification is an excellent opportunity for IT professionals to validate their skills and knowledge in implementing and managing ServiceNow Discovery. Certified Implementation Specialist - Discovery certification provides individuals with a competitive edge in the job market and demonstrates their ability to work with ServiceNow solutions. With the rising demand for ServiceNow solutions worldwide, becoming a certified CIS-Discovery Implementation Specialist can open up many career opportunities for IT professionals.

ServiceNow CIS-Discovery certification exam is a rigorous and comprehensive assessment of an individual's knowledge and skills in implementing and administering the ServiceNow Discovery application. CIS-Discovery Exam is designed to test a candidate's ability to configure and manage the Discovery application, as well as their understanding of the underlying architecture and functionality of the Discovery module. Successful completion of the exam demonstrates that the individual has the skills and knowledge required to implement and administer the ServiceNow Discovery application in a production environment.

## ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q99-Q104):

### NEW QUESTION # 99

How many CI Identifiers can be configured per CI Class?

Response:

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

### NEW QUESTION # 100

When troubleshooting discovery from a discovery status, which of the following lists will prove helpful?

(Choose 3 answers)

Response:

- A. ECC Queue
- B. Running Processes
- C. Discovery Log
- D. Devices

**Answer: A,C,D**

### NEW QUESTION # 101

What related list on a classifier dictates which Horizontal Pattern probe is launched?

- A. Pattern probes
- B. Discovery Log
- C. Triggers probes
- D. Classification Criteria

**Answer: C**

Explanation:

A classifier is a set of rules that identifies a device type based on the results of a probe. A classifier can have one or more related lists that define the classification criteria, the pattern probes, and the triggers probes. The pattern probes related list specifies which horizontal discovery pattern to run for the device type. The triggers probes related list specifies which probes to run after the device is classified, and before the horizontal discovery pattern is executed. The triggers probes can be used to gather additional information or credentials that are needed for the horizontal discovery pattern.

:

- 1: ServiceNow Discovery Overview, page 9
- 2: ServiceNow Discovery Documentation, Classifiers section

### NEW QUESTION # 102

By default, which of the following are automatically available as variables for horizontal discovery patterns?  
(Choose two.)

- A. **infrastructure\_system**
- B. windows\_cmdb\_ci
- C. The CI Type on the Discovery Pattern form
- D. **computer\_system**

**Answer: A,D**

Explanation:

Horizontal discovery patterns are a series of operations that tell Discovery which CIs to find on your network, what credentials to use, and what tables to populate in the CMDB. Horizontal discovery patterns use variables to store and pass information between the operations. By default, there are two variables that are automatically available for horizontal discovery patterns: `infrastructure_system` and `computer_system`. These variables store the information about the infrastructure and the computer system of the target CI, respectively. They are populated by the Horizontal Pattern probe and sensor, which enable Discovery to use patterns for horizontal discovery.

### NEW QUESTION # 103

Which of the following choices must be installed on a MID Server to run Credential-less Discovery?

- A. Defender
- B. **Nmap**
- C. Credential-less Extension
- D. Advanced IP Scanner

**Answer: B**

Explanation:

Credential-less Discovery is a feature of ServiceNow Discovery that allows the instance to identify configuration items (CIs) without using credentials. Credential-less Discovery uses Network Mapper (Nmap), a free and open-source network scanner, to collect information about the CIs by sending packets and analyzing the responses. Nmap must be installed on the MID Server that runs Credential-less Discovery. Credential-less Discovery can be used as a fallback option when credential-based probes fail, or as a primary option for scanning certain types of devices, such as network devices, printers, or IoT devices.
