What should you recommend?

- A. HPE iLO Amplifier
- B. HPE OneView
- **C. HPE InfoSight**
- D. HPE GreenLake Central

**Answer: C**

Explanation:

Understanding the Requirements:

The customer needs a solution for cloud-based machine learning, health and performance monitoring.

The solution should assist in making proactive decisions regarding infrastructure.

Solution Options:

A: HPE GreenLake Central: A management platform for HPE GreenLake, but it is not specifically designed for proactive infrastructure monitoring through machine learning.

B: HPE iLO Amplifier: Primarily used for firmware updates and health monitoring of HPE servers, but lacks comprehensive machine learning capabilities.

C: HPE InfoSight: A cloud-based AI platform for proactive monitoring, performance optimization, and predictive analytics for HPE infrastructure.

D: HPE OneView: Infrastructure management software, but does not provide the same level of predictive analytics and proactive monitoring as InfoSight.

Why HPE InfoSight (C) is the Best Fit:

**Answer: A**

Explanation:

### NEW QUESTION # 41

Your customer is very concerned about protecting data on their DL380 server. Even though a large storage capacity is critical, the customer values fault tolerance over write performance.

Which RAID solution should you recommend?

- A. RAID 6
- B. RAID 5
- C. RAID 1
- D. RAID 0

**Answer: A**

Explanation:

RAID 6: RAID 6 provides fault tolerance by using double parity, allowing the system to withstand two simultaneous drive failures. It offers higher fault tolerance compared to RAID 5, which only tolerates a single drive failure. Although RAID 6 has a write performance penalty due to the additional parity calculations, it provides a good balance between capacity and high fault tolerance, which is critical for the customer.
