## RUCKUS Certified Networking Implementer Sample Questions (Q25-Q30):

### NEW QUESTION # 25

A Core, Aggregation, Edge topology network is running Rapid Spanning Tree Protocol (RSTP). Two switches at the edge are legacy and run 802.1D.

To influence the convergence time of the legacy switches at the edge, where are the timers modified?

- A. the route-only port on the upstream gateway
- B. on the Aggregation switches connected to the legacy edge switches
- C. on the two legacy 802.1D switches at the edge
- D. on the root bridge at the core

### Answer: B

Explanation:

\* RSTP and Legacy 802.1D Compatibility:

\* RSTP (802.1w) can interoperate with legacy switches running STP (802.1D). However, the legacy switches use different timers and convergence mechanisms, which can lead to delays.

\* Optimizing Timers for Legacy Edge Switches:

\* The edge switches running 802.1D rely on BPDU timing set by the upstream aggregation switches.

\* To influence the convergence time, the timers such as hello time, max age, and forward delay must be adjusted on the aggregation switches connected to these legacy edge switches. This ensures better compatibility and faster convergence.

\* Why Not Other Options?

\* A: The route-only port does not participate in STP.

\* B: Timers cannot be modified on legacy switches themselves as they strictly follow 802.1D standards.

\* D: The root bridge sets global parameters but does not address edge-specific timer optimization.

### NEW QUESTION # 26

At which prompt can the ping command be executed?

- A. ICX7150-C12 Router(config-if-mgmt-1)#+
- B. ICX7150-C12 Router(config)#
- C. ICX7150-C12 Router#
- D. ICX7150-C12 Router(config-if-e1000-1/1/1)#+

### Answer: C

Explanation:

\* Understanding CLI Levels:

\* The ping command is used to test connectivity to other devices by sending ICMP echo requests.

\* It can only be executed from the privileged EXEC mode, which is indicated by the Router# prompt.

\* Why Other Prompts Don't Work:

\* A. Router(config-if-mgmt-1)#+: This is the interface configuration mode for the management port and does not allow execution of diagnostic commands like ping.

\* B. Router(config)#: This is the global configuration mode, which is used to configure the switch but does not support diagnostic commands.

\* D. Router(config-if-e1000-1/1/1)#+: This is the interface configuration mode for Ethernet 1/1/1, which also does not allow execution of ping.

### NEW QUESTION # 27

A Wi-Fi access point is configured for management traffic on the default VLAN and a guest SSID on VLAN 10. The access point is connected to port 1/1/10.

What is the correct configuration?

- A. `vlan 10`  
`no untagged ethernet 1/1/10`
- B. `vlan 1`  
`no tagged ethernet 1/1/10`  
!
- C. `vlan 10`  
`tagged ethernet 1/1/10`
- D. `vlan 1`  
`no untagged ethernet 1/1/10`  
!  
`vlan 10`  
`tagged ethernet 1/1/10`

**Answer: D**

### NEW QUESTION # 28

Based on the following configuration, which statement is true?

```
ICX-Router (config)# ipv6 unicast-routing
ICX-Router (config)# interface ethernet 1/3/1
ICX-Router (config-if-e1000-1/3/1)# ip address 10.172.10.1/24
ICX-Router (config-if-e1000-1/3/1)# ipv6 address 2001:db8:12d:1300::/64
```

- A. The interface will transmit and receive both IPv4 and IPv6 traffic simultaneously.
- B. The `ipv6 enable` command must also be configured at the interface level.
- C. ICX devices only support dual-stacked IPv4 and IPv6 configuration on a VE interface.
- D. ICX devices do not support IPv4 and IPv6 addresses configured on the same interface.

**Answer: A**
