Palo Alto Networks Cloud Security Professional Sample Questions (Q99-Q104):

NEW QUESTION # 99

What is an automatically correlated set of individual events generated by the firewall and runtime sensors to identify unfolding attacks?

- A. incident
- B. anomaly
- C. policy
- D. audit

Answer: A

Explanation:

Reference: https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/runtime_defense/incident_explorer.html

An automatically correlated set of individual events generated by the firewall and runtime sensors to identify unfolding attacks is known as an "incident". Incidents provide a consolidated view of related security events, making it easier for administrators to understand the scope and potential impact of an attack, and to take appropriate response actions.

NEW QUESTION # 100

Which two IDE plugins are supported by Prisma Cloud as part of its DevOps Security? (Choose two.)

- A. IntelliJ
- B. CircleCI
- C. BitBucket
- D. Visual Studio Code

Answer: A,D

Explanation:

Prisma Cloud supports integration with various Integrated Development Environments (IDEs) as part of its DevOps Security offerings, including Visual Studio Code (Option B) and IntelliJ (Option D). These integrations allow developers to scan their Infrastructure as Code (IaC) templates and application code for vulnerabilities and compliance issues directly within their preferred development environments, promoting a "shift left" security approach. BitBucket (Option A) and CircleCI (Option C) are more commonly associated with Continuous Integration/Continuous Deployment (CI/CD) pipelines rather than being IDEs.

NEW QUESTION # 101

What happens when a role is deleted in Prisma Cloud?

- A. The users associated with that role will be deleted.
- B. The access key associated with that role is automatically deleted.
- C. Any integrations that use the access key to make calls to Prisma Cloud will stop working.
- D. Any user who uses that key will be deleted.

Answer: B

Explanation:

When you create an access key, the key is tied to the role with which you logged in and if you delete the role, the access key is automatically deleted. <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/manage-prisma-cloud-administrators/create-access-keys>

NEW QUESTION # 102

A container and image compliance rule has been configured by enabling all checks; however, upon review, the container's compliance view reveals only the entries in the image below.

What is the appropriate action to take next?

- A. Wait until Prisma Cloud finishes the compliance scan and recheck.
- B. Change the rule options to list only failed checks in the compliance rule edit window.
- C. Deploy defenders to scan complete container compliance.
- **D. Change the rule options to list both failed and passed checks in the compliance rule edit window.**

Answer: D

Explanation:

The image provided showcases a filtered compliance view, which is displaying only certain checks with varying severities and descriptions related to container and image compliance. Since the compliance rule was configured to enable all checks but only a subset of entries is visible, it implies that the current view is filtered to show specific entries. To obtain a comprehensive view of all checks, including those that have passed, the rule options must be adjusted. By selecting the option to list both failed and passed checks, one can gain complete visibility over the compliance status of the container, ensuring that no aspect of the compliance has been overlooked and that all necessary information is available for review.

NEW QUESTION # 103

Which statement accurately characterizes SSO Integration on Prisma Cloud?

- A. An administrator can configure different Identity Providers (IdP) for all the cloud accounts that Prisma Cloud monitors.
- B. An administrator who needs to access the Prisma Cloud API can use SSO after configuration.
- C. Prisma Cloud supports IdP initiated SSO, and its SAML endpoint supports the POST and GET methods.
- **D. Okta, Azure Active Directory, PingID, and others are supported via SAML.**

Answer: D

Explanation:

Prisma Cloud supports Single Sign-On (SSO) integration through Security Assertion Markup Language (SAML), enabling users to authenticate using their existing identity providers (IdPs) such as Okta, Azure Active Directory, PingID, among others. This SSO integration allows for a seamless user authentication experience, where users can log in to Prisma Cloud using their credentials managed by their organization's IdP. The SAML protocol facilitates this by allowing secure exchange of authentication and authorization data between the IdP and Prisma Cloud.

This integration enhances security by centralizing user authentication, reducing the number of passwords users need to remember, and enabling organizations to enforce their security policies, such as multi-factor authentication (MFA) and password complexity, across their cloud security tools. SAML support is a common feature in cloud security platforms for integrating with various IdPs, making it a verified approach for Prisma Cloud as well.
