## Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q141-Q146):

### NEW QUESTION # 141

Which attack mitigation must be in place to prevent an attacker from authenticating to a service using a brute force attack?

- A. Forced password change every 6 months
- B. Use of a 100 ms delay between each authentication
- C. Use of a password manager
- D. Use of multifactor authentication for all accounts

**Answer: D**

Explanation:

Multifactor Authentication (MFA) is one of the most effective mitigations against brute-force attacks. Even if an attacker guesses or steals a user's password, they would still need a second authentication factor (e.g., push notification, hardware token, biometric verification) to complete login.

SCAZT Section 2: User and Device Security (Pages 40-43) emphasizes the importance of MFA in protecting identities from password spraying, credential stuffing, and brute-force attacks.

### NEW QUESTION # 142

To secure user and device access, identity certificates are used for:

- A. Encrypting email messages
- B. Speeding up the device connectivity
- C. Increasing storage capacity
- **D. Authenticating users and devices**

**Answer: D**

#### NEW QUESTION # 143

OIDC stands for OpenID Connect.

What is it used for in the context of identity management?

- **A. To authenticate users by leveraging an identity provider**
- B. To track user activity on websites
- C. To connect to open networks
- D. To encrypt device data

**Answer: A**

#### NEW QUESTION # 144

Refer to the exhibit. An engineer must analyze a segmentation policy in Cisco Secure Workload. What is the result of applying the policy?

- **A. HR cannot use Telnet to connect to IT by using Rule #2.**
- B. The explicit deny all rule is applied.
- C. HR can use Telnet to connect to IT by using Rule #1.
- D. The default catch-all rule is applied by using Rule #3.

**Answer: A**

Explanation:

The policy includes three rules under the Apps scope. Rule #1 allows HR to communicate with IT on TCP port 23 (Telnet), but it is marked as "Default." Rule #2 denies the same HR-to-IT Telnet traffic and is marked as "Absolute," which takes precedence over any default rule. In Cisco Secure Workload (Tetration), an "Absolute" rule will override both "Default" and inherited rules. Therefore, even though there's an allow in Rule #1, the deny in Rule #2 prevents HR from using Telnet to connect to IT.

#### NEW QUESTION # 145

In the context of cloud security, NIST framework primarily provides:

- A. Data encryption algorithms
- B. Network performance metrics
- **C. Standards and guidelines for cybersecurity practices**
- D. Physical security guidelines

**Answer: C**
