## VMware 3V0-24.25시험대비 덤프자료 & 3V0-24.25최신 업데이트 덤프공 부

VMware인증 3V0-24.25시험을 패스하여 자격증을 취득하시면 찬란한 미래가 찾아올것입니다. VMware인증 3V0-24.25인증시험을 패스하여 취득한 자격증은 IT인사로서의 능력을 증명해주며 IT업계에 종사하는 일원으로서의 자존심입니다. ITDumpsKR의 VMware인증 3V0-24.25덤프는 시험패스에 초점을 맞추어 제일 간단한 방법으로 시험을 패스하도록 밀어주는 시험공부가이드입니다.구매전VMware인증 3V0-24.25무료샘플을 다운받아 적성에 맞는 지 확인하고 구매할지 아닐지 선택하시면 됩니다.

## 최신 Professional Level Exams 3V0-24.25 무료샘플문제 (Q26-Q31):

### 질문 # 26

A VI Administrator is planning to upgrade a Supervisor Cluster. The pre-check validation fails with an error indicating insufficient resources.

Review the current resource usage of the Supervisor Control Plane (3 VMs):

Control Plane Size: Small

Total CPU Reservation: 6000 MHz (2000 MHz per VM)

Total Memory Reservation: 24 GB (8 GB per VM)

Resource Pool 'Namespaces' Capacity:

CPU: 7000 MHz

Memory: 26 GB

The upgrade process requires deploying a fourth Control Plane VM temporarily to perform the rolling update.

What is the most likely cause of the pre-check failure?

- A. The storage datastore is full.
- B. The Management Network IP pool is exhausted.

- C. The ESXi hosts are in maintenance mode.
- D. The 'Namespaces' Resource Pool does not have enough unreserved CPU and Memory capacity to power on the fourth (surge) Control Plane VM required for the rolling upgrade.

정답: D

#### 질문 # 27

A cloud platform team is deploying multiple Supervisors in a VMware Cloud Foundation (VCF) environment to support a multi-tenant VKS architecture. Each Supervisor will host a distinct set of namespaces mapped to different organizational tenants such as Finance, Public Services, and R&D, where each tenant consumes resources from dedicated workload domains. What is the purpose of the vcf context create command?

- A. Provides authentication to the Supervisor cluster.
- B. Creates a connection to VCF Operations for the current session.
- C. Creates a new storage profile for a cluster.
- D. Creates a named set of access parameters for a VKS cluster.

정답: D

#### 설명:

VCF 9.0 defines a VCF CLI context as a configuration set for a specific endpoint (for example, a Kubernetes cluster, vSphere Supervisor, or VCF Automation) and explains that a context stores the key connection parameters such as endpoint, context type, path to kubeconfig, and credentials. This aligns directly with option C, because vcf context create is used to create a named context that encapsulates the access parameters needed to work with a specific Supervisor or VKS cluster and to switch between multiple environments without rewriting configuration each time.

The documentation further shows vcf context create being used to connect either to a Supervisor endpoint or to a workload (VKS) cluster (by providing workload cluster name/namespace or by using a generated kubeconfig), which is exactly the multi-tenant operational pattern in the question. While authentication is part of what happens during context creation (for example, creating a configuration that includes a JWT for Kubernetes API access), the command's purpose is broader: it creates the reusable context object that defines where and how the CLI connects.

#### 질문 # 28

A Platform Engineer needs to configure a vSphere Namespace to allow a specific Active Directory group, dev-admins@corp.local, to have full administrative access to the Kubernetes namespace, including the ability to create and delete TKG clusters. The solution must follow the principle of least privilege within vSphere.

Which configuration steps in the vSphere Client will achieve this? (Select all that apply.)

- A. In the Namespace permissions, add dev-admins@corp.local with the Owner role.
- B. Assign the Administrator role to dev-admins@corp.local at the vCenter Server Global Permissions level.
- C. In the Namespace permissions, add dev-admins@corp.local with the CanEdit role.
- D. Assign the NSX Administrator role to dev-admins@corp.local in NSX Manager.
- E. Ensure the Identity Source corp.local is configured in vCenter Single Sign-On.

정답: A,E

#### 질문 # 29

A Cloud Architect is designing a disaster recovery plan for a mission-critical Zonal Supervisor deployment. The scenario involves a catastrophic failure of the Supervisor Cluster itself (e.g., corruption of the etcd database across all zones) during a failed upgrade, requiring a full restore.

Environment:

\* VKS workloads are backed up using Velero.

\* The Supervisor configuration (Namespaces, Policies) is backed up using the vCenter File-Based Backup.

What is the correct sequence of steps to restore service? (Select all that apply.)

- A. Manually recreate all vSphere Namespaces and re-assign permissions before restoring workloads.
- B. Since the Supervisor state (etcd) is corrupted, the administrator must restore the Supervisor Cluster using the specific "Restore Supervisor" workflow (often involving the restore-supervisor.sh script or UI equivalent if available in the specific

VCF version) which utilizes the backup data to reconstruct the Control Plane VMs.

- C. It is unnecessary to restore the Supervisor; simply redeploying a new Supervisor and pointing Velero to the object store will automatically recover the cluster infrastructure.
- D. Restore the vCenter Server from its file-based backup to recover the Supervisor's management context.
- E. After the Supervisor is restored, use Velero to restore the TKG workloads (TanzuKubernetesClusters) into the restored Namespaces.

정답: B,D,E

### 질문 # 30

A company standardized on the following configurations:

\* vSphere Kubernetes Service (VKS) upgrade is separate from vCenter upgrades.

\* A private registry will be utilized.

How should an administrator adhere to these standards?

- A. When uploading the service definition, choose Asynchronous Private.
- B. Issue a kubectl command pointing the service definition to the private registry.
- C. When uploading the service definition, choose Asynchronous Public.
- D. Issue a PowerCLI command to point to the private registry.

정답: A

설명:

VCF 9.0 documentation explicitly indicates that vCenter upgrades and the Supervisor/cluster (Workload Management) upgrade are distinct, noting that "if you have only upgraded vCenter and not the cluster" then DevOps engineers have reduced permissions until the cluster is upgraded. This supports the stated standard that VKS/Workload Management lifecycle can be treated separately from vCenter. For the private registry requirement, VCF 9.0 provides an operational mechanism to authenticate and pull artifacts from private registries: "Registry secrets allow package and repository consumers to authenticate to and pull images from private registries," implemented via a standard Kubernetes Secret of type kubernetes.io/dockerconfigjson.

Taken together, the standard implies (1) asynchronous handling (separate lifecycle from vCenter) and (2) private sourcing (images pulled from an internal registry with registry secrets). Therefore, selecting Asynchronous Private best matches both requirements in a single configuration choice, aligning with the documented separation of upgrades and the documented need to use authenticated access to private registries.

### 질문 # 31

.....

경쟁율이 심한 IT시대에 VMware 3V0-24.25 인증시험을 패스하여 자격증을 취득함으로 IT업계 관련 직종에 종사하고자 하는 분들에게는 아주 큰 가산점이 될수 있고 자신만의 위치를 보장할수 있으며 더욱이는 한층 업된 삶을 누릴수 있을수도 있습니다. VMware 3V0-24.25 덤프로 VMware 3V0-24.25 시험에서 실패하면 덤프비용을 보상해드리기에 안심하고 시험준비하셔야 합니다.

3V0-24.25 시험대비 덤프자료 : <https://www.itdumpskr.com/3V0-24.25-exam.html>

VMware 3V0-24.25 시험대비 인증공부 시험불합격시 덤프비용 환불 서비스, VMware 인증 3V0-24.25 덤프 구매의향이 있으시면 무료샘플을 우선 체험해보세요, 예를 들어 3V0-24.25 덤프에 있는 모든 문제를 마스트하면 VMware Professional Level Exams 시험에 쉽게 합격하여 취직을 하거나 연봉인상, 승진에 많은 도움이 되어드립니다, 3V0-24.25 최신버전 공부자료에 있는 문제를 잘 이해하고 완벽하게 공부하시면 많은 지식을 장악할뿐만 아니라 가장 편하게 3V0-24.25 시험에 대비할수 있습니다, ITDumpsKR 3V0-24.25 시험대비 덤프자료는 여러분의 IT전문가 꿈을 이루어드리는 사이트 입니다.

말 한 마디에 수십억, 수백억이 왔다 갔다 하니 날 때부터 교육을 받는 게 3V0-24.25 아닐까 의심스러운 정도로 평은 그 자체였다, 그리고 어머니가 깊이 잠에 든 걸 확인하자마자 집 밖으로 나왔다, 시험불합격시 덤프비용 환불 서비스.
