

# JN0-664 Test Book, Clearer JN0-664 Explanation

2026 Latest TestkingPass JN0-664 PDF Dumps and JN0-664 Exam Engine Free Share: <https://drive.google.com/open?id=1onCCnDaGtjdn18K7K4xLzEJ35-jsLsu9>

For candidates who are going to buy JN0-664 study materials online, they may care much about the private information. We respect the privacy of you, and we can ensure you that if you JN0-664 study materials from us, your personal information such as your name and email address will be protected well. Once the order finishes, your information will be concealed. In addition, JN0-664 Exam Materials are high quality, since we have a professional team to check the questions and answers. Online and offline chat service stuff is available, if you have any questions about JN0-664 study materials, don't hesitate to contact us.

Buy Juniper JN0-664 preparation material from a trusted company such as TestkingPass. This will ensure you get updated Juniper JN0-664 study material to cover everything before the big day. Practicing for an Service Provider, Professional (JNCIP-SP) (JN0-664) exam is one of the best ways to ensure success. It helps students become familiar with the format of the actual JN0-664 Practice Test. It also helps to identify areas where more focus and attention are needed. Furthermore, it can help reduce the anxiety and stress associated with taking an Service Provider, Professional (JNCIP-SP) (JN0-664) exam as it allows students to gain confidence in their knowledge and skills.

## JN0-664 Test Book 100% Pass | Valid Clearer JN0-664 Explanation: Service Provider, Professional (JNCIP-SP)

You may urgently need to attend JN0-664 certificate exam and get the certificate to prove you are qualified for the job in some area. If you buy our JN0-664 study materials you will pass the test almost without any problems. Our JN0-664 study materials boost high passing rate and hit rate so that you needn't worry that you can't pass the test too much. We provide free tryout before the purchase. To further understand the merits and features of our JN0-664 Practice Engine you could look at the introduction of our product in detail.

Juniper JN0-664: Service Provider, Professional (JNCIP-SP) exam is a certification exam that is designed for professionals who are looking to enhance their skills in the field of service provider networking. Service Provider, Professional (JNCIP-SP) certification exam is conducted by Juniper Networks, which is one of the leading networking equipment providers in the world.

## Juniper Service Provider, Professional (JNCIP-SP) Sample Questions (Q68-Q73):

### NEW QUESTION # 68

Exhibit

You are running a service provider network and must transport a customer's IPv6 traffic across your IPv4-based MPLS network using BGP. You have already configured `mpis ipv6-tunneling` on your PE routers.

Which two statements are correct about the BGP configuration in this scenario? (Choose two.)

- A. You must configure family inet6 unicast between PE routers
- **B. You must configure family inet6 unicast between PE and CE routers.**
- **C. You must configure family inet6 labeled-unicast between PE routers.**
- D. You must configure family inet6 add-path between PE and CE routers.

**Answer: B,C**

Explanation:

Explanation

To transport IPv6 traffic over an IPv4-based MPLS network using BGP, you need to configure two address families: family inet6 labeled-unicast and family inet6 unicast. The former is used to exchange IPv6 routes with MPLS labels between PE routers, and the latter is used to exchange IPv6 routes without labels between PE and CE routers. The `mpis ipv6-tunneling` command enables the PE routers to encapsulate the IPv6 packets with an MPLS label stack and an IPv4 header before sending them over the MPLS network.

### NEW QUESTION # 69

Which two statements describe PIM-SM? (Choose two.)

- **A. Routers with receivers send join messages to their upstream neighbors.**
- B. Traffic is initially flooded to all routers and an S,G is maintained for each group.
- **C. Traffic is only forwarded to routers that request to join the distribution tree.**
- D. Routers without receivers must periodically prune themselves from the SPT.

**Answer: A,C**

### NEW QUESTION # 70

Exhibit

You are troubleshooting the connection between AS 64496 and AS 64497 and notice that only one of the paths is being used for traffic forwarding.

Referring to the exhibit, which three actions will ensure that R1 is configured properly for load balancing BGP routes? (Choose three.)

- A. Verify that there is a load balancing export policy under routing-options for the received BGP routes on R1.
- **B. Verify that the multipath option is configured under protocols bgp on R1.**
- C. Verify that an import load balancing policy exists under protocols bgp for the received BGP routes on R1.
- **D. Verify that the multipath option is configured under protocols bgp on both R2 and R3.**
- **E. Verify that the routing table on R1 has BGP routes for 203.0.113.128/25 with multiple next hops.**

**Answer: B,D,E**

### NEW QUESTION # 71

Which two EVPN route types are used to advertise a multihomed Ethernet segment? (Choose two.)

- A. Type 2
- **B. Type 1**
- C. Type 3
- **D. Type 4**

**Answer: B,D**

### NEW QUESTION # 72

Exhibit

Referring to the exhibit, you are receiving the 192.168.0.0/16 route on both R3 and R4 from your EBGP neighbor. You must ensure that R1 and R2 receive both BGP routes from the route reflector. In this scenario, which BGP feature should you configure to accomplish this behavior?

- A. multihop
- **B. add-path**
- C. route-target
- D. multipath

**Answer: B**

Explanation:

Explanation

BGP add-path is a feature that allows the advertisement of multiple paths through the same peering session for the same prefix without the new paths implicitly replacing any previous paths. This behavior promotes path diversity and reduces multi-exit discriminator (MED) oscillations. BGP add-path is implemented by adding a path identifier to each path in the NLRI. The path identifier can be considered as something similar to a route distinguisher in VPNs, except that a path ID can apply to any address family. Path IDs are unique to a peering session and are generated for each network. In this question, we have a route reflector (RR) that receives two routes for the same prefix (192.168.0.0/16) from an EBGP neighbor. By default, the RR will only advertise its best path to its clients (R1 and R2). However, we want R1 and R2 to receive both routes from the RR. To achieve this, we need to configure BGP add-path on the RR and enable it to send multiple paths for the same prefix to its clients.

### NEW QUESTION # 73

.....

With the help of performance reports of Service Provider, Professional (JNCIP-SP) (JN0-664) Desktop practice exam software, you can gauge and improve your growth. You can also alter the duration and Service Provider, Professional (JNCIP-SP) (JN0-664) questions numbers in your practice tests. Questions of this Service Provider, Professional (JNCIP-SP) (JN0-664) mock test closely resemble the format of the actual test. As a result, it gives you a feeling of taking the actual test.
