IBM Db2 12 for z/OS Administrator Sample Questions (Q11-Q16):

NEW QUESTION # 11

A down level page set is identified by the following error message:

DSNB232I UNEXPECTED DATA SET LEVEL ID ENCOUNTERED

Which of the following should be performed to correct the condition?

- A. Execute a REORG on the object in question
- B. Replace the object with an appropriate data set at the proper level and confirm with DSN1PRNT of the header page
- C. Stop the object, set the DLDFFREQ subsystem parameter to OFF, and then restart the object in RW status
- **D. Execute a REPAIR DBD REBUILD on the object**

Answer: D

NEW QUESTION # 12

In any disaster recovery scenario, a direct relationship exists between the frequency at which image copies are taken and sent to the recovery site and which of the following?

- A. The total number of incremental image copies made
- B. Time spent rebuilding indexes at disaster site
- C. The ability to perform a RESTORE SYSTEM
- **D. The amount of data that could potentially be lost**

Answer: D

Explanation:

In any disaster recovery scenario, system-wide points of consistency are necessary for maintaining data integrity and preventing a loss of data. A direct relationship exists between the frequency at which you make and send copies to the recovery site and the amount of data that you can potentially lose.

NEW QUESTION # 13

Which of the following allows tracking of database administration tasks performed by system DBADMs?

- A. Use the REPORT utility with option TABLESPACESET
- B. Define and start an appropriate audit policy in SYSIBM.SYSAUDITPOLICIES
- **C. Use the DIAGNOSE utility with option TRACEID**
- D. Start the appropriate accounting trace classes and analyze the SMF records

Answer: C

NEW QUESTION # 14

Which type of trace is used to record transaction-level data that is written when the processing for a transaction is completed?

- A. Accounting
- B. Monitor
- **C. Audit**
- D. Statistics

Answer: C

NEW QUESTION # 15

Which of the following is TRUE about the SYSCTRL authority?

- **A. It is designed to be an administrator in a system with sensitive data**
- B. It is designed not to be a part of the administrative authorizations
- C. It is designed to allow access to all data directly in DB2
- D. It is designed so group privileges cannot be granted to SYSCTRL

Answer: A

Explanation:

The SYSCTRL authority is designed for administering a system that contains sensitive data. With the SYSCTRL authority, you have nearly complete control of the DB2 subsystem. However, you cannot access user data directly unless you are explicitly granted the privileges to do so.
