Real Apple DEP-2025 PDF Questions [2026]-Secret To Pass Exam In First

Attempt

Our customers receive Apple DEP-2025 questions updates for up to 365 days after their purchase. They can also try a free demo for satisfaction before buying our Apple DEP-2025 dumps. And a 24/7 support system assists them whenever they are stuck in any problem or issue. This Apple DEP-2025 Questions is a complete package and a blessing for candidates who want to prepare quickly for the DEP-2025 exam. Buy It Now!

Apple Deployment and Management Exam Sample Questions (Q218-Q223):

NEW QUESTION # 218

Which enrollment type can prevent a user from unenrolling a device from MDM?

- A. Account-driven User Enrollment
- B. Account-driven Device Enrollment
- C. Profile-driven User Enrollment
- **D. Automated Device Enrollment**

Answer: D

Explanation:

Apple Learning highlights that only Automated Device Enrollment (ADE) ensures a device remains persistently managed and supervised, preventing users from manually removing the MDM profile. When ADE is configured in Apple Business Manager, the MDM profile can be marked as non-removable, ensuring the device always checks in with MDM. This is crucial for organization-owned devices where IT must guarantee compliance and enforce policies. Account-driven and profile-driven enrollments are user-initiated, and the user can choose to remove management at any time. User Enrollment, by design, prioritizes privacy for BYOD and always allows unenrollment. Therefore, ADE is the enrollment type required when the organization needs strong, enforced management and non-removable MDM profiles.

NEW QUESTION # 219

Which feature allows IT administrators to manage cellular settings on a device?

- A. Find My
- B. MDM
- C. iCloud
- **D. Configuration profiles**

Answer: D

Explanation:

Configuration profiles allow IT administrators to manage cellular settings on iOS/iPadOS devices, such as configuring APN settings, disabling data roaming, or restricting cellular data for specific apps. These profiles are deployed via MDM or manually. Find My (option B) and iCloud (option C) are unrelated to cellular management. MDM (option D) delivers profiles, but the profiles contain the settings. The Apple Platform Deployment Guide details cellular configuration via profiles.

NEW QUESTION # 220

What must be installed on a device so you can manage it with MDM?

- **A. An enrollment profile**
- B. A provisioning profile
- C. Apple Configurator
- D. A supervision identity

Answer: A

Explanation:

An enrollment profile establishes MDM control. The Mobile Device Management Protocol Reference states, "An enrollment profile must be installed on a device to establish a connection with the MDM solution, enabling management." Options A, B, and D are unrelated to basic MDM enrollment.

References:

Mobile Device Management Protocol Reference, "Enrollment" section.

Apple Platform Deployment Guide, "MDM Basics" section.

NEW QUESTION # 221

Which feature of an MDM solution gives you the ability to integrate with internal tools and custom automations?

- A. A robust Application Programming Interface (API)
- B. Integration with Apple's Global Service Exchange (GSX)
- C. Support for the latest Apple MDM framework features
- D. Support for Automated Device Enrollment or zero-touch deployment

Answer: A

Explanation:

Apple emphasizes that modern MDM solutions must be extensible, and the primary way this is achieved is through a robust Application Programming Interface (API). APIs allow administrators and developers to automate device actions, integrate with existing IT service management systems (like ServiceNow), or build custom workflows. For example, an organization can script automated assignment of devices, license tracking, or compliance reporting. While Automated Device Enrollment and MDM frameworks provide device management capabilities, they are not the integration points for custom automation. GSX integration is used by resellers and service providers, not directly for IT automation. Therefore, APIs are the feature that enable deep integration with internal enterprise systems and advanced automation.

NEW QUESTION # 222

Which Terminal command can you use to test network responsiveness inside and outside your network?

- A. netstat
- B. networkUsage
- C. networkQuality
- D. networksetup

Answer: C

Explanation:

The networkQuality command tests responsiveness. The macOS Deployment Reference states, "Introduced in macOS Monterey, the networkQuality command measures upload and download responsiveness, providing insight into network performance inside and outside your local network." References:

macOS Deployment Reference, "Network Diagnostics" section.

Apple Platform Deployment Guide, "Network Tools" section.

NEW QUESTION # 223

.....

We have considered that your time may be very tight, and you can only use some fragmented time to learn. Therefore, it is really important to be able to read our DEP-2025 study materials anytime, anywhere. So we have developed our DEP-2025 exam questions to three different versions: the PDF, Software and APP online. They have covered all conditions that you will be in to study on our DEP-2025 learning guide. For example, the time you want to study on phone, computer, laptop, paper and so on.
