## InsuranceSuite-Analyst Reliable Test Guide & InsuranceSuite-Analyst Reliable Test Forum

The passing rate of our InsuranceSuite-Analyst training braindump is 99% which means that you almost can pass the InsuranceSuite-Analyst test with no doubts. The reasons why our InsuranceSuite-Analyst test guide' passing rate is so high are varied. That is because our test bank includes two forms and they are the PDF test questions which are selected by the senior lecturer, published authors and professional experts and the practice test software which can test your mastery degree of our InsuranceSuite-Analyst study question at any time. The two forms cover the syllabus of the entire InsuranceSuite-Analyst test. You will pass the InsuranceSuite-Analyst exam with it.

## Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q50-Q55):

### NEW QUESTION # 50

In InsuranceSuite, Page Configuration Format (PCF) files control the user interface. Which of the following are examples of common widgets used in PCF files? (Choose two)

- **A. NameValueView**
- B. MenuView
- **C. DetailView**
- D. TextView

- E. Card

**Answer: A,C**

Explanation:

Why this is correct

- \* NameValueView is a very common PCF widget used to display label-value pairs (for example, policy or claim attributes).
- \* DetailView is another core PCF widget used to display detailed information for an entity in a structured layout.

Why the others are not selected

- \* MenuView does exist in PCF, but when restricted to two choices, NameValueView and DetailView are the most fundamental and commonly referenced widgets in Guidewire training.
- \* Card is not a Guidewire PCF widget.
- \* TextView is not used as a standard standalone PCF widget in InsuranceSuite UI architecture.

### NEW QUESTION # 51

How are Page Configuration Format (PCF) files used in the Guidewire development environment?

- A. They contain the schema definition for the application database.
- B. Business analysts configure them to define requirements.
- C. Non-developers use PCF files to perform data analysis and reporting tasks.
- D. They serve as automated testing scripts for validating UI functionality.
- E. Developers use them to create and edit the visual components of the user interface.
- F. Developers work with them using the Guidewire Studio tool.

**Answer: E,F**

Explanation:

In Guidewire InsuranceSuite, Page Configuration Format (PCF) files are a core part of the user interface configuration layer. They define the structure, layout, and behavior of screens, panels, lists, and UI components displayed to end users. Therefore, Options B and F are correct.

PCF files are used by developers to create and edit the visual components of the UI (Option B). These files control how data is presented, how users navigate between screens, and how UI elements respond to user interaction. PCF files reference entities, fields, type lists, and rules, but they do not define business logic themselves.

Developers work with PCF files using Guidewire Studio (Option F), which is the primary IDE for configuring Guidewire applications. Studio provides validation, navigation, and deployment tooling for PCF files, making it the correct environment for managing UI configuration.

The other options are incorrect. Database schema definitions are handled by the data model, not PCF files (Option A). Non-developers do not use PCF files for reporting (Option C). Business analysts document requirements but do not configure PCF files directly (Option D). PCF files are not automated test scripts (Option E).

For analysts, understanding what PCF files do and who works with them helps ensure requirements are written clearly and realistically, aligned with Guidewire UI architecture.

### NEW QUESTION # 52

For Guidewire Cloud implementations, in which phases or activities does the Quality Analyst team play a critical role in ensuring project quality?

Choose 2 options.

- A. Defining the overall project governance structure and roles (Shared Responsibility Model)
- B. During the Inception phase, to develop the detailed configuration for all required user interface screens
- C. During the Stabilization phase, to conduct end-to-end testing, performance testing, and support User Acceptance Testing (UAT)
- D. Exclusively during the Launch phase, to provide direct end-user support for the deployed application
- E. Participating in Story Huddles with analysts and developers to understand the requirements
- F. During the Deployment phase, to verify project adherence to Guidewire Cloud Standards

**Answer: C,E**

Explanation:

The correct answers are A and D because the Quality Analyst team contributes to project quality both early in the lifecycle and later

during formal validation activities .

D). Participating in Story Huddles with analysts and developers to understand the requirements is correct because quality begins well before formal testing starts. In Guidewire projects, Quality Analysts play an important role in understanding stories, clarifying expected behavior, identifying gaps or ambiguities, and preparing for effective test design. Their involvement in story discussions helps ensure that requirements are testable and that potential defects are prevented earlier rather than only detected later.

A). During the Stabilization phase, to conduct end-to-end testing, performance testing, and support User Acceptance Testing (UAT) is also correct because Stabilization is the phase where the integrated solution is validated more comprehensively. Quality Analysts are central to coordinating and executing testing efforts that confirm the system works across business flows, performs adequately, and is ready for business acceptance and release.

The other options are not the best choices. B is incorrect because QA is not involved only at launch, and direct end-user support is not their exclusive core responsibility. C relates more to project governance and organizational setup than QA execution. E describes configuration work typically performed by developers or configurators, not Quality Analysts. F refers more to cloud compliance and standards oversight rather than the primary QA role.

So, in Guidewire Cloud implementations, Quality Analysts are especially critical in Story Huddles and during the Stabilization phase .

### NEW QUESTION # 53

Guidewire Marketplace is a website designed for browsing and downloading \_\_\_\_\_ and product add-ons.

- A. End-user documentation
- B. User story cards
- C. Detailed requirements documentation
- **D. Accelerators**

**Answer: D**

Explanation:

The Guidewire Marketplace is an ecosystem designed to help customers and partners accelerate implementations and extend product capabilities. The primary content available for browsing and downloading includes accelerators and product add-ons, making Option D the correct answer.

Accelerators available on the Marketplace include pre-built integrations, tools, templates, utilities, and solution components that address common insurance implementation needs. These assets are designed to reduce implementation time, lower risk, and promote reuse of proven solutions across Guidewire projects.

The Marketplace does not host user story cards (Option A), detailed requirements documentation (Option C), or end-user documentation (Option B). Those resources are typically found within SurePath collateral, project tools, or the Guidewire Education Marketplace.

For analysts, understanding the Marketplace is important because accelerators can influence solution design decisions, reduce the need for custom development, and support faster delivery while remaining aligned with Guidewire standards.

### NEW QUESTION # 54

Please select Elaboration session best practice(s):

- A. Revisit decisions made in prior sessions
- B. Don't suggest that something is out of scope
- C. Focus on the client's current workflow in order to write requirements that define their current system
- **D. Don't allow multiple conversations to go on at the same time**

**Answer: D**

Explanation:

Elaboration sessions are structured, collaborative workshops intended to validate requirements, align stakeholders, and refine user stories based on Guidewire out-of-the-box functionality. Following best practices ensures these sessions remain productive and value-focused.

A key best practice is preventing multiple conversations from occurring at the same time (Option A). Side conversations reduce focus, create misalignment, and often result in missed decisions or conflicting outcomes.

A single-threaded discussion ensures all participants hear the same information and contribute effectively.

The other options contradict Guidewire elaboration best practices. Analysts should suggest when something is out of scope (Option B) to protect delivery timelines and avoid scope creep. Revisiting decisions from prior sessions (Option C) undermines progress and should only occur if new, critical information emerges. Finally, focusing on the client's current workflow (Option D) leads to replicating legacy systems; Guidewire elaboration should emphasize future-state processes enabled by the product.

## NEW QUESTION # 55

.....

The price of Our InsuranceSuite-Analyst practice guide is affordable, and you can always find that from time to time, we will give some promotion for our worthy customers. Meanwhile, we provide the wonderful service before and after the sale to let you have a good understanding of our InsuranceSuite-Analyst Study Materials. Our service are working at 24/7 online to give you the best and the most professional guidance on our InsuranceSuite-Analyst learning braindumps.
