

Latest Microsoft DP-420 Test Dumps - Examcollection DP-420 Vce

P.S. Free 2026 Microsoft DP-420 dumps are available on Google Drive shared by VCE4Dumps: <https://drive.google.com/open?id=19tq8IHVYC5a2s5GtlUBaTIX0OcyW5KG>

With the Software version of our DP-420 exam questions, you will find that there are no limits for the amount of the computers when download and installation and the users. You can use our DP-420 study materials to stimulate the exam to adjust yourself to the atmosphere of the real exam and adjust your speed to answer the questions. The other two versions also boost the strength and applicable method and you could learn our DP-420 training quiz by choosing the most suitable version to according to your practical situation.

Earning the Microsoft DP-420 Certification can help developers demonstrate their expertise in designing and implementing cloud-native applications using Azure Cosmos DB. It can also help them stand out in the job market and advance their careers.

Free DP-420 Valid Torrent - DP-420 Pass4sure Vce & DP-420 Study Guide

The VCE4Dumps is also committed to ace the Microsoft DP-420 exam preparation journey and enable you to get success in the final Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB DP-420 exam. To achieve this objective the VCE4Dumps is offering real, updated, and error-free Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB DP-420 Dumps in three easy-to-use and compatible formats. These formats are DP-420 PDF dumps files, desktop VCE4Dumps DP-420 practice exam software, and web-based DP-420 practice test software.

Microsoft Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB Sample Questions (Q55-Q60):

NEW QUESTION # 55

You have a database in an Azure Cosmos DB SQL API Core (SQL) account that is used for development.

The database is modified once per day in a batch process.

You need to ensure that you can restore the database if the last batch process fails. The solution must minimize costs.

How should you configure the backup settings? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 56

You have an Apache Spark pool in Azure Synapse Analytics that runs the following Python code in a notebook.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

New and updated orders will be added to contoso-erp.orders: Yes

The code performs bulk data ingestion from contoso-app: No

Both contoso-app and contoso-erp have Analytics store enabled: Yes

The code uses the `spark.readStream` method to read data from a container named orders in a database named contoso-app. The data is then filtered by a condition and written to another container named orders in a database named contoso-erp using the `spark.writeStream` method. The write mode is set to "append", which means that new and updated orders will be added to the destination container1.

The code does not perform bulk data ingestion from contoso-app, but rather stream processing. Bulk data ingestion is a process of loading large amounts of data into a data store in batches. Stream processing is a process of continuously processing data as it arrives in real-time2.

Both contoso-app and contoso-erp have Analytics store enabled, because they are both accessed by Spark pools using the `spark.cosmos.oltp` method. This method requires that the containers have Analytics store enabled, which is a feature that allows Spark pools to query data stored in Azure Cosmos DB containers using SQL APIs3.

NEW QUESTION # 57

You have an Azure Cosmos DB for NoSQL account that has multiple write regions.

You need to receive an alert when requests that target the database exceed the available request units per second (RU/s).

Which Azure Monitor signal should you use?

- A. Region Removed
- **B. Metadata Requests**
- C. Data Usage
- D. Provisioned Throughput

Answer: B

Explanation:

Azure Monitor is a service that provides comprehensive monitoring for Azure resources, including Azure Cosmos DB. You can use Azure Monitor to collect, analyze, and alert on metrics and logs from your Azure Cosmos DB account. You can create alerts for Azure Cosmos DB using Azure Monitor based on the metrics, activity log events, or Log Analytics logs on your account1.

For your scenario, if you want to receive an alert when requests that target the database exceed the available request units per second (RU/s), you should use the Document Quota metric. This metric measures the percentage of RU/s consumed by your account or container. You can create an alert rule on this metric from the Azure portal by following these steps2:

In the Azure portal, select the Azure Cosmos DB account you want to monitor.

Under the Monitoring section of the sidebar, select Alerts, and then select New alert rule.

In the Create alert rule pane, fill out the Scope section by selecting your subscription name and resource type (Azure Cosmos DB accounts).

In the Condition section, select Add condition and choose Document Quota from the list of signals.

In the Configure signal logic pane, specify the threshold value and operator for your alert condition. For example, you can choose Greater than or equal to 90 as the threshold value and operator to receive an alert when your RU/s consumption reaches 90% or more of your provisioned throughput.

In the Alert rule details section, specify a name and description for your alert rule.

In the Actions section, select Add action group and choose how you want to receive notifications for your alert. For example, you can choose Email/SMS/Push/Voice as an action type and enter your email address or phone number as a receiver.

Review your alert rule settings and select Create alert rule to save it.

NEW QUESTION # 58

You have an Azure Cosmos DB container named container1.

You need to insert an item into container1. The solution must ensure that the item is deleted automatically after two hours.

How should you complete the item definition? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 59

You plan to deploy two Azure Cosmos DB Core (SQL) API accounts that will each contain a single database. The accounts will be configured as shown in the following table.

How should you provision the containers within each account to minimize costs? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
