- A. use the Prism central analysis Panel to create a pie chart by OSType
- B. In the VM dashboard , filter by the nutanix Guest tools - OS field
- C. Create a custom Focus using the OS Column
- D. Use a pre-defined Prism Central report

**Answer: B**

Explanation:

Explanation/Reference:

Please Re Check From your Side and let me know if the question correction is required

#### NEW QUESTION # 34

Which two advanced features requires you to install Nutanix Guest Tools (NGT)? (Choose two.)

- A. Live Migration of a VM between AHV & other Hypervisors
- B. File recovery from a third-party backup
- C. Disaster Recovery of a VM between AHV and ESXi Hypervisors
- D. Self-service file-level recovery from VM snapshots

**Answer: C,D**

#### NEW QUESTION # 35

Which NIC-teaming configuration balances network traffic based on source/destination IP addresses and TCP/UDP ports?

- A. Active-Active with LACP
- B. Active-Passive
- C. Active-Active with MAC Pinning
- D. Active-Backup

**Answer: A**

Explanation:

Link Aggregation Control Protocol (LACP) is a NIC-teaming configuration that balances network traffic based on source/destination IP addresses and TCP/UDP ports. LACP allows the administrator to configure multiple NICs as a single logical NIC, known as a Link Aggregation Group (LAG), which can increase the available bandwidth and provide redundancy. LACP uses a hashing algorithm to distribute traffic across the NICs in the LAG, based on the source and destination IP addresses and TCP/UDP ports. This ensures that traffic is evenly distributed across the NICs, which helps to improve overall network performance and availability. #### NEW QUESTION # 36

Which Component Allows you to pair sites for disaster Recovery Policy Creation Using Nutanix Leap?

- A. Recovery Plans
- B. Availability Zones
- C. Protection Policies
- D. Protection Domains

**Answer: B**

#### NEW QUESTION # 37

What type of relationship does a VM Affinity policy define?

- A. VM to Network VLAN
- B. VM to VM
- C. VM to Storage tier

- D. VM to Host

**Answer: D**

### Explanation:

The type of relationship that a VM Affinity policy defines is VM to Host. A VM Affinity policy is used to specify which host a virtual machine should be placed on. This can be used to ensure that certain VMs are always running on the same host for performance or availability reasons. Additionally, VM Affinity policies can also be used to ensure that VMs are spread across multiple hosts for better load balancing.

## NEW QUESTION # 38
