

2026 Pass-Sure Microsoft AZ-800 Hottest Certification

P.S. Free & New AZ-800 dumps are available on Google Drive shared by ExamDiscuss: https://drive.google.com/open?id=1Q_BbiNITy3j3N-JDAjZU8wjbIv63FKme

The Administering Windows Server Hybrid Core Infrastructure (AZ-800) web-based practice test works on all major browsers such as Safari, Chrome, MS Edge, Opera, IE, and Firefox. Users do not have to install any excessive software because this Administering Windows Server Hybrid Core Infrastructure (AZ-800) practice test is web-based. It can be accessed through any operating system like Windows, Linux, iOS, Android, or Mac. Another format of the practice test is the desktop software. It works offline only on Windows. Our Administering Windows Server Hybrid Core Infrastructure (AZ-800) desktop-based practice exam software comes with all specifications of the web-based version.

Microsoft AZ-800 exam is designed to test the skills and knowledge of IT professionals who are responsible for administering Windows Server hybrid core infrastructure. It is an advanced level certification exam that validates the candidate's ability to manage and maintain a hybrid environment that combines on-premises and cloud-based solutions. AZ-800 exam is targeted towards IT professionals who have experience with Microsoft Azure and Windows Server technologies and are looking to enhance their skills in managing hybrid infrastructure.

To pass the Microsoft AZ-800 exam, candidates need to demonstrate their ability to design, implement, and manage hybrid core infrastructure solutions that leverage both on-premises and cloud-based resources. They must have a deep understanding of Windows Server and Azure technologies, as well as experience with virtualization, networking, and storage. AZ-800 Exam is ideal for IT professionals who are looking to advance their careers and demonstrate their expertise in managing hybrid environments. By passing AZ-800 exam, candidates can validate their skills and knowledge and differentiate themselves in the job market.

Why Choose ExamDiscuss for Microsoft AZ-800 Exam Questions Preparation?

Each question and answer of our AZ-800 training questions are researched and verified by the industry experts. Our team updates the AZ-800 certification material periodically and the updates include all the questions in the past thesis and the latest knowledge points. So our service team is professional and top-tanking on the AZ-800 Exam braindump. And if you have any questions on our study guide, our services will help you with the right and helpful suggestions. Just have a try on our AZ-800 learning prep!

To earn the Microsoft AZ-800 certification, you must pass a single exam that covers a wide range of topics related to hybrid infrastructure. AZ-800 exam is designed to be challenging, and it requires a strong understanding of Windows Server, Azure cloud services, and hybrid cloud architecture. AZ-800 Exam consists of multiple-choice questions, and you will have a limited amount of time to complete it.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q222-Q227):

NEW QUESTION # 222

You have a server named Server1 that hosts Windows containers. You plan to deploy an application that will have multiple containers. Each container will be You need to create a Docker network that supports the deployment of the application. Which type of network should you create?

- A. transparent
- B. NAT
- C. I2tunnel
- D. I2bridge

Answer: A

Explanation:

Reference:

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/container-networking/network-drivers-topolo>

NEW QUESTION # 223

Your network contains a two-domain on-premises Active Directory Domain Services (AD DS) forest named Contoso.com. The forest contains the domain controllers shown in the following table.

Name	Description	Domain	Active Directory site
DC1	Forest-wide and domain-wide FSMO role holder	contoso.com	Hub
DC2	Domain-wide FSMO role holder	child.contoso.com	Site1
RODC3	Read-only domain controller (RODC)	contoso.com	Site2

You create an Active Directory site named Site3. Site1, Site2 and Site3 each has a dedicated site link to the Hub site.

In Site3, you install a new server named Server1.

You need to promote Server1 to an ROOC in child.contoso.com by using the install from Media (IFM) option. The solution must minimize network traffic.

What should you do? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Server to use to create the IFM source:

DC1
DC2
Server1
RODC3

Tool to use to create the IFM source:

Azure Backup
Dcdiag.exe
Ntdsutil.exe
Repadmin.exe
Windows Server Backup

Answer:

Explanation:

Answer Area

Server to use to create the IFM source:

DC1
DC2
Server1
RODC3

Tool to use to create the IFM source:

Azure Backup
Dcdiag.exe
Ntdsutil.exe
Repadmin.exe
Windows Server Backup

NEW QUESTION # 224

You have a server named Server1 that runs Windows Server. Server1 has the storage pools shown in the following table.

Name	Number of 7,200-RPM HDDs	Number of 10,000-RPM HDDs	Number of SSDs
Pool1	4	4	None
Pool2	None	2	2
Pool3	8	None	4

You plan to create a virtual disk named VDisk1 that will use storage tiers. Which pools can you use to create VDisk1 ?

- A. Pool3 only
- B. Pool2 only
- C. Pool1, Pool2, and Pool3
- D. Pool1 and Pool2 only
- E. Pool2 and Pool3 only
- F. Pool only
- G. Pool1 and Pool3 only

Answer: E

Explanation:

Storage tiering requires both standard HDDs and SSDs. We cannot use Pool1 because it does not have any SSDs.

NEW QUESTION # 225

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

Name	IP address
VPN1	172.16.0.254
VPN2	131.10.15.254
VPN3	10.10.0.254

You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

Name	: NPSclient1
Address	: 172.16.0.254
AuthAttributeRequired	: False
SharedSecret	: Pa55w.rd
VendorName	: RADIUS Standard
Enabled	: False
Microsoft	
Name	: NPSclient2
Address	: 131.10.15.254
AuthAttributeRequired	: False
SharedSecret	: Pa55w.rd
VendorName	: RADIUS Standard
Enabled	: True
Name	: NPSclient3
Address	: 172.16.1.254
AuthAttributeRequired	: False
SharedSecret	: Pa55w.rd
VendorName	: RADIUS Standard
Enabled	: True

VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes If the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

**Microsoft**

Statements	Yes	No
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	<input type="radio"/>	<input type="radio"/>
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	<input type="radio"/>	<input type="radio"/>
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area

Statements	Yes	No
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.	<input type="radio"/>	<input checked="" type="radio"/>
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.	<input checked="" type="radio"/>	<input type="radio"/>
The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.	<input type="radio"/>	<input checked="" type="radio"/>
