If you want to get a comprehensive idea about our real D-PWF-OE-00 study materials, you can free download the demos on our website. It is convenient for you to download the free demos of our D-PWF-OE-00 learning guide, all you need to do is just to find the "Download for free" item, and you will find there are three kinds of versions of D-PWF-OE-00 Learning Materials for you to choose from namely, PDF Version Demo, PC Test Engine and Online Test Engine, you can choose to download any one as you like.

EMC D-PWF-OE-00 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">PowerFlex Upgrades: This domain covers understanding upgrade procedures and executing cluster upgrades to newer software versions.
Topic 2	<ul style="list-style-type: none">PowerFlex Components and Resource Discovery: This domain covers identifying PowerFlex hardware models and software components, using management interfaces to interact with the system, and completing essential post-installation configuration tasks.

Topic 3	<ul style="list-style-type: none"> Expanding a PowerFlex Cluster: This domain focuses on cluster expansion and maintenance including using maintenance modes, adding nodes, configuring Storage Data Servers and Meta Data Managers, and understanding PowerFlex integration with APEX.
Topic 4	<ul style="list-style-type: none"> Protecting PowerFlex Storage: This section covers data protection through snapshot technology for point-in-time copies and volume replication between clusters for disaster recovery.
Topic 5	<ul style="list-style-type: none"> PowerFlex Storage: This domain addresses daily storage operations including creating and managing volumes, configuring shared file systems, and working with storage data targets.

EMC Dell PowerFlex Operate Exam Sample Questions (Q95-Q100):

NEW QUESTION # 95

Which operation redistributes data after adding new nodes?

- A. Rebalance
- B. Mapping
- C. Replication
- D. Snapshot

Answer: A

Explanation:

Rebalance ensures even data distribution after scaling operations.

NEW QUESTION # 96

What is the primary purpose of PowerFlex Manager?

- A. Automate deployment and lifecycle management
- B. Manage virtual machines
- C. Create snapshots of storage volumes
- D. Configure fault sets

Answer: A

Explanation:

PowerFlex Manager (PFxM) is the orchestration and automation appliance.

Automate deployment and lifecycle management (Option B): PFxM is designed to take bare-metal servers and automatically deploy the OS, networking, and PowerFlex software to build a cluster. Once built, it handles the Lifecycle Management (LCM), automating complex tasks like firmware upgrades, software patches, and node expansions without downtime.

NEW QUESTION # 97

What is the primary purpose of enabling Maintenance Mode on a PowerFlex node?

- A. To isolate the node for network troubleshooting without impacting data availability
- B. To add new nodes to the cluster

- C. To perform software upgrades or hardware maintenance
- D. To protect volumes using snapshots

Answer: C

Explanation:

In Dell PowerFlex, Maintenance Mode is a critical operational state used primarily when a node requires software upgrades, firmware patches, or physical hardware replacement. When a Storage Data Server (SDS) requires maintenance, it cannot simply be powered down, as this would cause a rebuild of data to restore redundancy, placing immense stress on the cluster.

There are two types of maintenance modes:

Protected Maintenance Mode (PMM): This is the standard method for planned maintenance. The system identifies the data residing on the target node and makes a temporary copy (mesh- mirrors) of that data onto other nodes in the cluster before the node enters maintenance. This ensures that the cluster maintains full data protection (usually 2 copies) even while the node is offline.

Instant Maintenance Mode (IMM): This is used when time is critical, or the node is already offline.

It acknowledges the node is down but does not trigger a full rebuild immediately, relying on the remaining copy of data.

Therefore, the specific purpose is to allow administrators to perform necessary software upgrades or hardware swaps in a controlled manner that manages data integrity and prevents unnecessary "storm" traffic from rebuilding data.

NEW QUESTION # 98

Which component is reconfigured when expanding metadata storage in PowerFlex?

- A. Fault Sets
- B. Replication Targets
- C. Metadata Managers
- D. Storage Pools

Answer: C

Explanation:

Metadata in PowerFlex is not stored in the general user Storage Pools; it is managed and stored by the Metadata Manager (MDM) cluster.

When a PowerFlex cluster grows significantly (e.g., increasing from 1000 to 100,000 volumes, or adding hundreds of nodes), the metadata usage increases.

Expanding Metadata Capabilities: You do not "expand" a metadata pool like you do a storage pool. Instead, you might reconfigure the MDM Cluster itself. This could involve moving from a 3- node MDM cluster to a 5-node MDM cluster to distribute the processing load, or replacing the MDM nodes with hardware possessing larger RAM and faster CPUs.

Therefore, the component being reconfigured to handle this growth is the Metadata Manager (MDM).

NEW QUESTION # 99

What type of authentication is supported for managing user accounts in PowerFlex?

- A. LDAP
- B. TACACS+
- C. SAML
- D. RADIUS

Answer: A

Explanation:

LDAP (Lightweight Directory Access Protocol) is the primary external authentication method supported by the PowerFlex core (MDM) for managing user access.

* Integration: PowerFlex can be configured to query an Active Directory or OpenLDAP server. This allows administrators to map AD Groups (e.g., "Storage Admins") to PowerFlex roles (e.g., "SuperUser"), centralizing password management and user termination.

* Note on SAML: While PowerFlex Manager (the management platform) and newer versions (v4.x) support SAML/OIDC for Single Sign-On, LDAP remains the fundamental answer for core authentication in most exam contexts unless specifically asking about PowerFlex Manager 4.0 Identity Management. TACACS+ and RADIUS are network-centric protocols and are generally not supported by the PowerFlex storage core.

NEW QUESTION # 100
