

1Z0-083 Latest Test Guide, 1Z0-083 Practical Information

2026 Latest DumpsMaterials 1Z0-083 PDF Dumps and 1Z0-083 Exam Engine Free Share: <https://drive.google.com/open?id=1XkLCqNXaCwJ0zgJnEqMopxXWn-I7tNmJ>

You can save a lot of time for collecting real-time information if you choose our 1Z0-083 study guide. Because our professionals have done all of these collections for you and they are more specialized in the field. So the keypoints are all contained in the 1Z0-083 Exam Questions. Besides, in order to ensure that you can see the updated 1Z0-083 practice prep as soon as possible, our system will send the updated information to your email address as soon as possible.

To prepare for the Oracle 1Z0-083 certification exam, candidates should have a thorough understanding of Oracle database administration, including the ability to install and configure Oracle databases, manage backup and recovery operations, manage database security, and tune database performance. Candidates should also have experience working with Oracle databases in a production environment.

Oracle 1Z1-083 exam is a certification-oriented exam designed for IT professionals who aim to enhance their skillset in Oracle database administration. It tests a candidate's advanced knowledge in various topics related to Oracle database administration. Oracle Database Administration II certification is globally recognized and widely accepted as a validation of an IT professional's expertise. Candidates must complete the Oracle Database Administration I exam and have basic knowledge of Oracle database technology to take the 1Z1-083 exam.

Understanding functional and technical aspects of Oracle Database Administration II Exam Number: 1Z0-083

The following will be discussed in the **ORACLE 1Z0-083 Exam Dumps**:

- Oracle Database: Deploy, Patch and Upgrade Workshop
- Creating an Oracle Database by using DBCA
- Using Flashback Technologies
- Diagnosing Failures
- Transporting Data
- Duplicating a Database
- Performing Recovery
- Patching Grid Infrastructure and Oracle Database
- Restore and Recovery Concepts

Oracle 1Z0-083 Practical Information | 1Z0-083 Braindumps

At present, our 1Z0-083 exam guide gains popularity in the market. The quality of our 1Z0-083 training material is excellent. After all, we have undergone about ten years' development. Never has our practice test let customers down. Although we also face many

challenges and troubles, our company get over them successfully. If you are determined to learn some useful skills, our 1Z0-083 Real Dumps will be your good assistant. Then you will seize the good chance rather than others.

Oracle Database Administration II Sample Questions (Q62-Q67):

NEW QUESTION # 62

Which two are true about automatic block repair? (Choose two.)

- A. Automatic block repair can repair blocks with no standby database if DB_BLOCK_CHECKING = TRUE.
- B. Real-Time Query must be enabled on a physical standby database for automatic block repair to be done on that physical standby database.
- C. It is not possible for media corrupt blocks.
- D. Real-Time Query must be enabled on a physical standby database for automatic block repair to be done on its primary database.
- E. Real-Time Query must be enabled on a primary database for automatic block repair to be done on any of its physical standby databases.

Answer: B,E

NEW QUESTION # 63

Which two are true about the Oracle database methodology? (Choose two.)

- A. Tuning activities should stop once the user is satisfied with performance.
- B. The database instance memory should always be tuned before tuning any file systems.
- C. Tuning activities should stop once agreed service levels for performance have been met.
- D. The Oracle Database time model should be used to find the database and instance areas most in need of tuning.
- E. SQL statements should always be tuned before tuning any file systems.
- F. The alert log should be used to find the database and instance areas most in need of tuning.

Answer: D,E

Explanation:

A is correct. It will show what the database is spending most time on, that (usually) indicates where tuning is required.

B and C relate to user experience. We (DBAs) should work with users, to help achieve their requirements. However, we can be proactive outside of this. Just because a user is happy - doesn't mean we can't make them "happier" by doing tuning activities before things get bad. So, neither of these should be true.

D is incorrect, memory is much less likely to be a culprit of an issue, than a filesystem I/O issue.

E is correct. We should never try to tune a file system first. If we make a file system change that fixes one SQL statement - it might harm a different SQL statement. However, if we tune the first SQL statement, it will have no impact on the rest of the system.

Therefore, we should try to tune

"bad SQL" first.

F is incorrect - the alert log gives us little/no information to do with tuning.

NEW QUESTION # 64

Choose the best answer. Examine this configuration: 1. CDB1 is an Oracle Database 12c Release 2 container database (CDB). 2. PDB1 and PDB2 are two pluggable databases (PDBs) in CDB1. After successfully performing all the preupgrade tasks, you execute these commands from the Oracle Database 18c environment: \$ export ORACLE_SID=cdb1 \$ sqlplus / as sysdba SQL> STARTUP UPGRADE; SQL> SHOW pdbs CON_ID CON_NAME OPEN MODE RESTRICTED -----
----- 2 PDB\$SEED 3 PDB1 4 PDB2 MIGRATE YES MOUNTED YES MOUNTED YES SQL> ALTER PLUGGABLE DATABASE pdb1 OPEN UPGRADE; Pluggable database altered. SQL> exit \$
\$ORACLE_HOME/perl/bin/perl catctl.pl -C 'PDB2' What is the outcome?

- A. CDB\$ROOT, PDB\$SEED, PDB1, and PDB2 are upgraded.
- B. Only CDB\$ROOT, PDB\$SEED, and PDB2 are upgraded.
- C. Only CDB\$ROOT and PDB\$SEED are upgraded.
- D. It fails because PDB\$SEED is in MIGRATE state.
- E. It fails because PDB2 is not in UPGRADE state.
- F. Only CDB\$ROOT, PDB\$SEED, and PDB1 are upgraded.

Answer: E

NEW QUESTION # 65

Examine this output:

```
SQL> select pluggable_database, shares, parallel_server_limit
  2  from dba_cdb_rsrc_plan_directives where plan = 'MY_PLAN'
  3  order by pluggable_database;

PLUGGABLE_DATABASE          SHARES  PARALLEL_SERVER_LIMIT
-----  -----  -----
ORAS$AUTOTASK                      100
ORAS$DEFAULT_PDB_DIRECTIVE          0
PDB1                                2      100
PDB2                                2      25
PDB3                                1

SQL> select name, value from v$parameter
  2  where name = 'resource_manager_plan';

NAME          VALUE
-----  -----
resource_manager_plan  MY_PLAN
ORACLE
```

Which two are true?

- A. Any PDB not specified in the plan will be able to use a maximum of 16.5% of the available system resources.
- B. PDB2 is guaranteed at least 25% of the available parallel execution processes if there is enough demand.
- C. PDB1 is always limited to 40% of the available system resources regardless of demand.
- D. PDB3 is guaranteed to receive at least 20% of the available system resources if there is enough demand.
- E. PDB3 can use all available parallel execution processes at times.
- F. Any PDB not specified in the plan will be unable to execute statements in parallel.

Answer: B,F

NEW QUESTION # 66

Which two are true about common objects? (Choose two.)

- A. They can be extended data-linked in CDB\$ROOT.
- B. They can be created only in CDB\$ROOT.
- C. They can exist in user-defined schemas only in application containers.
- D. They can be only metadata-linked in an application container.
- E. They can exist in CDB\$ROOT and an application root.
- F. They can be created only in an application root.

Answer: E

NEW QUESTION # 67

.....

The chance of making your own mark is open, and only smart one can make it. We offer 1Z0-083 exam materials this time and support you with our high quality and accuracy 1Z0-083 learning quiz. Comparing with other exam candidates who still feel confused about the perfect materials, you have outreached them. So it is our sincere suggestion that you are supposed to get some high-rank practice materials like our 1Z0-083 Study Guide.
