Pass Guaranteed Quiz Fortinet - Reliable Exam FCP_FMG_AD-7.6 Assessment

As is known to us, it must be of great importance for you to keep pace with the times. If you have difficulty in gaining the latest information when you are preparing for the FCP_FMG_AD-7.6, it will be not easy for you to pass the exam and get the related certification in a short time. However, if you choose the FCP_FMG_AD-7.6 exam reference guide from our company, we are willing to help you solve your problem. There are a lot of IT experts in our company, and they are responsible to update the contents every day. If you decide to buy our FCP_FMG_AD-7.6 study question, we can promise that we will send you the latest information every day.

Fortinet FCP_FMG_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Advanced Configuration: This section of the exam measures the skills of Network Security Engineers and includes knowledge of high availability (HA), FortiGuard service configuration, and global database ADOM settings. These advanced functions help strengthen system reliability and streamline management at a larger scale.
Topic 3	<ul style="list-style-type: none"> Troubleshooting

Topic 4	<ul style="list-style-type: none"> This section of the exam measures the skills of System Administrators and focuses on resolving problems at different levels of FortiManager. Candidates must troubleshoot deployment scenarios, imports, installations, and both device-level and ADOM-level issues, as well as identify and resolve system problems effectively.

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q48-Q53):

NEW QUESTION # 48
Refer to the exhibits.

The screenshot displays the FortiManager device database interface. On the left, a tree view shows the hierarchy: Managed FortiGate (4) containing BR1-FGT-1, HQ-NGFW-1, Local-Firewall, and Remote-Firewall; Logging FortiGate (4); and Managed FortiAnalyzer (1) containing FortiAnalyzer. The main area features two donut charts: 'Connectivity' showing 4 connected devices and 2 model devices, and 'Device Config...' showing 4 synchronized devices and 2 unknown devices. Below the charts is a table with columns for Device Name, Config Status, Provisioning Templates, Policy Package Status, and Firmware.

Device Name	Config Status	Provisioning Templates	Policy Package Status	Firmware
BR1-FGT-1	✓ Synchronized	✓ default	● BR1-FGT-1	FortiGa
HQ-NGFW-1	✓ Synchronized		✓ HQ-NGFW-1	FortiGa
Local-Firewall	● Unknown		✓ Central	FortiGa
Remote-Firewall	● Unknown		✓ Central	FortiGa

FortiManager address object

Edit Address - LAN

Category: Address

Name: LAN

Color:

Type: Subnet

IP/Netmask: 10.0.0.0/255.255.255.0

Interface: any

Static Route Configuration:

Comments: 0/255

Add To Groups:

Advanced Options >

Per-Device Mapping v

FOR TINET

Search...

<input type="checkbox"/>	Mapped Device	Details
<input type="checkbox"/>	BR1-FGT-1 [root]	IP/Netmask: 192.168.1.0/255.255.255.0
<input type="checkbox"/>	HQ-NGFW-1 [root]	IP/Netmask: 172.16.0.0/255.255.255.0
<input type="checkbox"/>	Local-Firewall [root]	IP/Netmask: 172.16.10.0/255.255.255.0

3

Which IP/netmask will be present in the LAN firewall address object on the Remote-Firewall?

- A. 172.16.10.0/255.255.255.0
- B. 10.0.0.0/255.255.255.0
- C. 192.168.1.0/255.255.255.0
- D. 172.16.0.0/255.255.255.0

Answer: B

Explanation:

The correct answer is B . The LAN address object shown in the exhibit has a default value of 10.0.0.0/255.255.255.0 , and it has per-device mappings only for BR1-FGT-1 , HQ-NGFW-1 , and Local-Firewall .

There is no per-device mapping entry for Remote-Firewall .

The FortiManager 7.6 Administrator Study Guide gives the exact rule for this behavior: "The devices in the ADOM that do not have a dynamic mapping for LAN have a default value" . The same page also explains that dynamic objects let you map one logical object to unique values per device , but devices without a mapping use the object's default definition.

Since Remote-Firewall is not listed in the Per-Device Mapping table, it inherits the default LAN value: 10.0.0.0/255.255.255.0 .

NEW QUESTION # 49

Refer to the following configuration. FortiManager # config system global global# set workspace-mode normal global# end
FortiManager # What are two results from the configuration shown in the exhibit? Choose two answers

- A. Concurrent read-write access to an ADOM is disabled.
- B. Multiple administrators can lock and work on separate ADOMs at the same time.
- C. The same administrator can lock more than one ADOM at the same time.
- D. All changes must be approved before they can be installed on a device.

Answer: A,B

Explanation:

The command set workspace-mode normal enables Workspace (ALL ADOMs) . In this mode, FortiManager uses ADOM locking to prevent configuration conflicts. The study guide explains that workspace mode is used to prevent concurrent ADOM access , and once an ADOM is locked, only the administrator who locked it has read-write access while all others have read-only access. That makes D correct.

B is also correct because locking is applied per ADOM, so different administrators can work at the same time on different ADOMs without conflicting with each other. This is consistent with the design goal of workspace mode and ADOM locking.

C describes workflow mode , not workspace normal. Approval before installation is required only with set workspace-mode workflow.

NEW QUESTION # 50

After correcting a policy package configuration issue, you want to prevent administrators from repeating the mistake that caused the issue.

Which FortiManager approach best meets this need?

- A. Restrict administrators with an administration profile from viewing the revision history to limit who can make changes.
- B. Enable a workflow requiring approval before installing policy packages on any FortiGate.
- C. Enable the change note to require administrators to add a note whenever they change object configurations.
- D. Configure an TCL script to run locally on FortiManager for each FortiGate.

Answer: B

Explanation:

Enabling a workflow with approval ensures that any policy package changes must be reviewed and approved before installation, preventing administrators from repeating configuration mistakes and enforcing change control.

NEW QUESTION # 51

Refer to the exhibit.

```
Start to import config from device(Remote-FortiGate) vdom(root) to
adom(root), package(Remote-FortiGate_root)

"firewall address",SKIPPED,"(name=all, oid=2309, DUPLICATE)"

"firewall address",FAIL,"(name=REMOTE_SUBNET, oid=2311,
reason=interface((firewall address:REMOTE_SUBNET) any<-port6) binding
fail)"

"firewall policy",FAIL,(name=1, oid=3070, reason=interface(interface binding
contradiction. detail: (firewall address:REMOTE_SUBNET) any<-port6) binding
fail)"
```

What can you conclude from the downloaded import report?

- A. The administrator will see a new policy package named Remote-FortiGate_root in the FortiManager ADOM database.

- B. FortiManager does not support per-device mapping for firewall addresses.
- C. FortiManager will change the configuration of REMOTE_SUBNET to match the interface mapping coming in from Remote-FortiGate.
- D. As a result of this policy import process, FortiManager will create a new firewall address called REMOTE_SUBNET in the ADOM database.

Answer: A

Explanation:

The import report shows that a new policy package named Remote-FortiGate_root will be created in the FortiManager ADOM database, but some firewall addresses and policies failed to import due to interface binding conflicts.

NEW QUESTION # 52

Refer to the exhibit.

```

FortiManager # diagnose dvm device list
--- There are currently 6 devices/vdoms managed ---
--- There are currently 6 devices/vdoms count for license ---

TYPE             OID      SN                HA      IP            NAME           ADOM   IPS           FIRMWARE   Hw_GenX
-----
fmgfaz-managed  188     FGVM02TM24013504 -    100.65.1.111 BR1-FGT-1     My_ADOM  7.0 MR6 (3401) N/A
|
| STATUS: dev-db: not modified; conf: in sync; cond: pending; dm: installed; conn: up; template:[modified]default
|
vdom:[3]root flags:0 adom:My_ADOM pkg:[imported]BR1-FGT-1
  
```

Which two statements about the output are true? (Choose two.)

- A. The latest revision history for the managed FortiGate does not match the device-level database.
- B. The system template default will override device-level database configurations.
- C. Configuration changes have been installed on FortiGate, updating policy and device-level database.
- D. The latest revision history for the managed FortiGate does match the FortiManager policy database.

Answer: A,B

Explanation:

The status "pending" indicates the latest revision history does not match the device-level database, meaning there are unapplied changes.

The template is marked as [modified], so the system template default will override device-level database configurations when installed.

NEW QUESTION # 53

.....

Although the FCP_FMG_AD-7.6 exam prep is of great importance, you do not need to be over concerned about it. With scientific review and arrangement from professional experts as your backup, and the most accurate and high quality content of our FCP_FMG_AD-7.6 Study Materials, you will cope with it like a piece of cake. So our FCP_FMG_AD-7.6 learning questions will be your indispensable practice materials during your way to success.
