Arch-303 Online Exam - Arch-303 Valid Study Materials

No company in the field can surpass us on the Arch-303 exam questions. So we still hold the strong strength in the market as a leader. At present, our Arch-303 guide materials have applied for many patents. We attach great importance on the protection of our intellectual property. And our website is so famous that it is easily recognised by the candidates as a popular brand among all of the webistes. And a lot of our loyal customers only trust our Arch-303 Study Guide for their exam as well.

Salesforce Certified B2C Commerce Architect Sample Questions (Q66-Q71):

NEW QUESTION # 66

The client provided these business requirements:

- * The B2C Commerce platform will integrate with the client's Order Management System (OMS).
- * The OMS supports Integration us-no legacy RPC style SOAP services.
- * The OMS is hosted on client s infrastructure.

What is the right cartridge folder to place the WSDL provided for the OMS service?

- A. /cartridge/services
- B. /cartridge

- C. /cartridge/webreferences
- D. /cartridge/webreferences2

Answer: C

Explanation:

In Salesforce Commerce Cloud, the standard practice for organizing WSDL files for SOAP services is to place them in the /cartridge/webreferences directory. This folder is specifically designed for storing web service definitions (WSDLs), ensuring they are managed in a structured manner within the cartridge. This organization aids in maintaining clean architecture and simplifies access to these service definitions for development and maintenance purposes.

NEW QUESTION # 67

The Client has implemented a different category/search layout for mobile and desktop. The code uses a session attribute called deviceType to choose the corresponding layout. This attribute is populated from the browser user agent. After this implementation they have run into these problems:

- * Sometimes desktop pages are being served to both desktop and mobile customers.
- * Sometimes mobile pages are being served to both desktop and mobile customers.

The page has caching implemented that depends on promotions. SEC is very important and the site traffic is high.

Which solution should the Architect select to resolve the issue without impacting the existing requirements?

- A. Change the URL structure to include desktop and mobile as URL parameters to ensure different cached versions of the page
- B. Disable caching for these pages to ensure that the correct template is used to render the mobile and desktop pages.
- C. Create customer groups for desktop and mobile users and use remote includes based on these groups to render the mobile and desktop pages
- D. Create customer groups for desktop and mobile users and empty promotions linked to these groups to ensure different cached versions of the page.

Answer: A

Explanation:

To resolve the issue of incorrect page versions being served across different devices, changing the URL structure to include device-specific parameters can be highly effective. By adding parameters such as 'desktop' or 'mobile' to the URLs:

* The caching mechanism can differentiate between the content for different device types, thus caching and serving the correct version of the page according to the device type specified in the URL.

* This method allows for maintaining existing caching strategies linked to promotions and ensures that SEO is not adversely affected since the content remains the same per device type but is merely served through different URLs.

This approach addresses the core issue without requiring disabling of caching or reengineering existing promotional structures, hence preserving site performance and user experience.

NEW QUESTION # 68

An existing B2C Commerce site has the following aliases configuration:

Which statement related to this configuration is incorrect?

- A. Hostname www.example.com will redirect to www.example.com/us
- B. Hostname www.example.co.uk will redirect to www.example.com/uk.
- C. Hostname www.example.de will redirect to www.example.com/de.
- D. Site supports multiple hostnames and locales.

Answer: A

Explanation:

In the provided configuration, the incorrect statement is B. While it appears that the hostname www.example.com should redirect to www.example.com/us based on the "if-site-path": "us" entry, this assumes that the default path or redirect isn't

overridden by other configurations within the hostname alias file not visible in the snapshot provided. Typically, in Salesforce B2C Commerce, such a direct statement about redirection should align with explicit mapping rules that include hostname and path directives, which are not detailed for www.

example.com to www.example.com/us in the snippet provided. This absence suggests that the statement may be incorrect unless corroborated by additional detailed mappings in the full configuration file.

NEW QUESTION # 69

An Architect has been approached by the Business with a request to create a custom product finder. The finder would initially be available on only one site, and would eventually be extended to be available on all sites the Business maintains. There is a requirement that these widgets are also available to be used in a Job context for export to other systems.

Each site will have a different category available for use by the product finder.

Where should the Architect store the custom settings for use on both the storefront and in a job context?

- A. Jobs Framework parameters
- B. Category custom attributes
- C. Custom Object with an Organizational Scope
- D. Custom Object with a Site Scope

Answer: C

Explanation:

To manage custom settings for a product finder that needs to be accessible both on the storefront and in a job context, storing these settings in a Custom Object with an Organizational Scope is most appropriate. This allows the settings to be centralized and accessible across different sites and job contexts, ensuring consistency and reusability of the configurations:

* Organizational Scope: Enables settings to be shared across multiple sites without duplicating data, maintaining a single source of truth for configurations that affect various parts of the organization.

* Custom Object: Provides the flexibility to define specific attributes and values that are unique to the business requirements of the product finder and other integrations.

NEW QUESTION # 70

The Client is planning to switch to a new Payment Service Provider (PSP). They have approached an Architect to understand the time and effort to integrate the new PSP. The PSP offers a LINK cartridge compatible with SiteGenesis Pipelines, but the Client's website is built on Controllers.

Which two options should the Architect take into consideration before starting analysis? Choose 2 answers

- A. Estimate the effort and risk to convert the LINK cartridge from pipelines to controllers.
- B. Produce a proof of concept converting the most essential pipelines into controllers and integrate the cartridge.
- C. Reach out to the PSP development team and ask if a new cartridge version that supports controllers is under development
- D. Look for a different PSP that supports controllers and would not require conversion efforts.

Answer: A,C

Explanation:

When integrating a new Payment Service Provider (PSP) LINK cartridge designed for SiteGenesis Pipelines into a site built on Controllers, consider these options:

* Option A (Estimate the effort and risk to convert the LINK cartridge from pipelines to controllers): Assessing the effort involved in converting the cartridge provides insight into the project scope, helping to manage risk and allocate resources effectively.

* Option B (Reach out to the PSP development team and ask if a new cartridge version that supports controllers is under development): This can potentially save significant development time and resources if a compatible version is already planned or in progress.

These approaches help in making an informed decision on integration strategies, balancing between customization efforts and leveraging existing solutions.

NEW QUESTION # 71

.....

This updated Salesforce Arch-303 exam study material of ActualTorrent consists of these 3 formats: Salesforce Arch-303 PDF, desktop practice test software, and web-based practice exam. Each format of ActualTorrent aids a specific preparation style and offers unique advantages, each of which is beneficial for strong Salesforce Certified B2C Commerce Architect (Arch-303) exam preparation.
