Exam Plat-Dev-210 Guide Materials, Plat-Dev-210 Latest Exam Review

It is not easy to qualify for a qualifying exam in such a short period of time. Our company's Plat-Dev-210 learning material is very good at helping customers pass the exam and obtain a certificate in a short time, and now I'm going to show you our Plat-Dev-210 Learning materials. Our products mainly include the following major features. This is a wise choice, after using our Plat-Dev-210 Training Materials, you will realize your dream of a promotion because you deserve these reports and your efforts will be your best proof.

Salesforce Certified Omnistudio Developer Sample Questions (Q104-Q109):

NEW QUESTION # 104

A developer is configuring the API URL in an HTTP Action element within an Integration Procedure. What is the merge code syntax for passing a Date node from an element named SetValue in the URL?

- A. {{SetValues.Date}}
- **B. %SetValues.Date%**
- C. t 'SetValues']['Date']
- D. %SetValues: Date%

Answer: B

Explanation:

In OmniStudio Integration Procedures, when referencing data from a prior step in the HTTP Action URL, the correct merge code syntax is:

* %ElementName.PropertyName%

So, referencing a value called Date from a step named SetValues must be written as:

* %SetValues.Date%

This is the format recognized by the OmniStudio Merge Language (OML) for dynamic value substitution in URLs or headers.

Incorrect Options:

- * A. Invalid syntax - not recognized by OmniStudio merge logic.
- * B. {{SetValues.Date}} is used in FlexCards, not in Integration Procedures.
- * D. %SetValues: Date% is incorrect merge syntax due to space and colon use.

:

Salesforce OmniStudio Documentation # Merge Code Syntax for Integration Procedures

NEW QUESTION # 105

A developer needs to use the COUNTIF function to process data entered by the user in an OmniScript.

The output of the function needs to be displayed to the user immediately in the current step.

Based on best practice, which element should the developer use this function in?

- **A. Formula element**
- B. Set Values element
- C. Range element

Answer: A

Explanation:

In OmniScripts, if you need to apply a function (like COUNTIF) to dynamic data and show the result immediately, the Formula element is the correct choice.

* B. Formula element - The Formula element supports real-time calculation using OmniStudio expression functions (like COUNTIF, SUM, etc.) and updates values instantly on the screen without the need for server calls.

Incorrect Options:

- * A. Set Values element is used to set static or conditional values but doesn't support formula evaluation.
- * C. Range element is used for value comparisons and conditions, not for calculations.

Salesforce OmniStudio Developer Guide # OmniScript Formula Element

NEW QUESTION # 106

A developer examines data received from an external data source. The data is nested two levels down in the JSON structure.

Which OmniStudio tool could the developer use to simplify this data?

- A. An integration Procedure
- **B. A DataRaptor Transform**
- C. A guided workflow
- D. An HTTP Action Element

Answer: B

Explanation:

A DataRaptor Transform can simplify nested data by transforming it into a flat structure. The developer can use JSON paths to map the input data to the output data and define the output structure.

NEW QUESTION # 107

A developer is troubleshooting an Integration Procedure with two elements: A Remote Action named FetchCart and a Response Action named ResponseCart.

In Preview, what JSON node shows the data sent to the Response Action?

- A. Response
- B. ResponseCartDebug
- **C. ResponseCart**
- D. FetchCart

Answer: C

Explanation:

In Preview, the JSON node that shows the data sent to the Response Action is the name of the Response Action itself. In this case, it is ResponseCart. The other nodes show either the input data or the output data of the Integration Procedure.

NEW QUESTION # 108

When launching an OmniScript from an action on a FlexCard, the OmniScript displays, but no Salesforce data is populated: Which two errors could cause this behavior?

Choose 2 answers

Choose 2 answers

- A. There is no active version of the Data Raptor Extract.
- **B. In the DataRaptor Extract Action, the Input Parameters Filter Value is misspelled.**
- **C. The Id Field for Actions in the FlexCard is blank.**
- D. There is non active version of the OmniScript

Answer: B,C

Explanation:

The Id Field for Actions in the FlexCard specifies which field from the FlexCard data source will be used as the record ID for the OmniScript. If this field is blank, the OmniScript will not receive any record ID and will not be able to retrieve any Salesforce data. In the DataRaptor Extract Action, the Input Parameters Filter Value determines how to filter the data based on the record ID. If this value is misspelled, the DataRaptor Extract will not be able to match the record ID and will not return any data.

NEW QUESTION # 109
