### **Sample Questions (Q29-Q34):**

#### **NEW QUESTION # 29**

A user in your organization received a spam email that they reported for further investigation. You need to find out more details and the scope of this incident as quickly as possible. What should you do?

- A. Conduct a Vault search to find this email and identify if additional users were affected.
- **B. Conduct a search in the security investigation tool to find this email, and identify whether additional users were affected.**
- C. Conduct an Email reports search to find this email and all of the email's recipients.
- D. Conduct a search to find all emails sent by the sender by using the Gmail API.

**Answer: B**

Explanation:

The security investigation tool is specifically designed for investigating security incidents like spam and phishing emails. It allows you to search for emails, review their details, and determine the scope of the incident, including identifying whether other users were affected. This tool is the most appropriate and efficient way to respond to the incident.

#### **NEW QUESTION # 30**

You've noticed an increase in phishing emails that contain links to malicious files hosted on external Google Drives. These files often mimic legitimate documents and trick users into granting access to their accounts. You need to prevent users from accessing these malicious external Drive files, but allow them to access legitimate external files. What should you do? (Choose two.)

- A. Enforce stricter password policies.
- B. Deploy advanced malware detection software on all user devices to scan and block malicious files.
- **C. Create a Drive trust rule that blocks all external domains except for a pre-approved list of trusted partners.**
- **D. Conduct regular security awareness training to educate users.**

**Answer: C,D**

Explanation:

E Implement two-factor authentication for all users

Explanation:

Conduct regular security awareness training to educate users: Educating users about phishing threats and safe online practices can help them recognize and avoid phishing attempts, reducing the chances of them falling for such scams.

Create a Drive trust rule that blocks all external domains except for a pre-approved list of trusted partners: By setting up a Drive trust rule to limit access to files from external domains, you can block links to malicious files hosted on untrusted external Google Drives while still allowing access to legitimate external files from trusted sources.

#### **NEW QUESTION # 31**

Your organization's information security team has asked you to determine and remediate if a user (user1@example.com) has shared

any sensitive documents outside of your organization. How would you audit access to documents that the user shared inappropriately?

- A. Open Security Dashboard-> File Exposure Report-> Export to Sheet, and filter for user1@example.com
- B. Have the super administrator use the Security API to audit Drive access.
- **C. Open Security Investigation Tool-> Drive Log Events. Add two conditions: Visibility Is External, and Actor Is user1@example.com**
- D. As a super administrator, change the access on externally shared Drive files manually under user1@example.com

**Answer: C**

Explanation:

### NEW QUESTION # 32

Your organization has been on Google Workspace Enterprise for one year. Recently, an admin turned on public link sharing for Drive files without permission from security. Your CTO wants to get better insight into changes that are made to the Google Workspace environment. The chief security officer wants that data brought into your existing SIEM system. What are two ways you should accomplish this? (Choose two.)

- A. Use Apps Script and the Reports API to export drive audit data to the existing SIEM system
- B. Use the BigQuery export to send drive audit data to the existing SIEM system via custom code.
- **C. Use the BigQuery export to send admin audit data to the existing SIEM system via custom code**
- D. Use the Data Export Tool to export admin audit data to your existing SIEM system
- **E. Use Apps Script and the Reports API to export admin audit data to your existing SIEM system**

**Answer: C,E**

### NEW QUESTION # 33

You are the Workspace administrator for an international organization with Enterprise Plus Workspace licensing. A third of your employees are located in the United States, another third in Europe, and the other third geographically dispersed around the world. European employees are required to have their data stored in Europe. The current OU structure for your organization is organized by business unit, with no attention to user location. How do you configure Workspace for the fastest end user experience while also ensuring that European user data is contained in Europe?

- A. Configure three configuration groups within your domain. Assign the appropriate data regions to each corresponding group, but assign no preference to the users outside of the United States and Europe.
- B. Add three additional OU structures to designate location within the current OU structure. Assign the corresponding data region to each.
- **C. Configure a configuration group for European users, and set the data region to "Europe".**
- D. Configure a data region at the top level OU of your organization, and set the value to "Europe".

**Answer: C**

Explanation:

<https://support.google.com/a/answer/7630496?hl=en#zippy=%2Cstep-set-the-organizational-structure>  
"put them in a configuration group (to set for users across or within departments)".
