

JN0-336 Exam Bootcamp | Instant JN0-336 Download

BONUS!!! Download part of PremiumVCEDump JN0-336 dumps for free: https://drive.google.com/open?id=1KI6EUeBFmqbjMhxDSeG0xkgY6_oW5e_

As for the JN0-336 study materials themselves, they boost multiple functions to assist the learners to learn the study materials efficiently from different angles. For example, the function to stimulate the exam can help the exam candidates be familiar with the atmosphere and the pace of the Real JN0-336 Exam and avoid some unexpected problem occur. Briefly speaking, our JN0-336 training guide gives priority to the quality and service and will bring the clients the brand new experiences and comfortable feelings to pass the JN0-336 exam.

Every year, countless Juniper aspirants face challenges to prove their skills and knowledge by attempting the Juniper JN0-336 certification exam. Once they pass this examination, lucrative job opportunities in the tech industry await them. But fear not! PremiumVCEDump has got you covered with their collection of real and updated JN0-336 Exam Questions. These affordable JN0-336 questions are available in three user-friendly formats, ensuring a smooth and efficient preparation experience for the JN0-336 exam.

Instant JN0-336 Download - Valid JN0-336 Torrent

Although the Juniper JN0-336 exam prep is of great importance, you do not need to be over concerned about it. With scientific review and arrangement from professional experts as your backup, and the most accurate and high quality content of our Juniper JN0-336 Study Materials, you will cope with it like a piece of cake. So our JN0-336 learning questions will be your indispensable practice materials during your way to success.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q101-Q106):

NEW QUESTION # 101

Exhibit

Exhibit

```
[edit services ssl]
user@srx# commit
[edit services ssl proxy]
'profile Server-Protect'
  Unsupported cert type of server certid: SSL-Proxy
error: configuration check-out failed
[edit services ssl]
user@srx#
```

When trying to set up a server protection SSL proxy, you receive the error shown.

What are two reasons for this error? (Choose two.)

- A. The SSL proxy certificate ID does not exist.
- B. The SSL proxy certificate ID is for a forwarding proxy.
- C. The SSL proxy certificate ID does not have the correct renegotiation option set.
- D. The SSL proxy certificate ID is part of a blocklist.

Answer: A,C

Explanation:

The error message shown in the exhibit regarding the SSL proxy setup indicates an issue with the type of server certificate being used. The error explicitly states, "Unsupported cert type of server certid." Here are two plausible reasons for this error based on the options provided:

Option B. The SSL proxy certificate ID does not have the correct renegotiation option set.

This option points to a configuration issue related to the properties or capabilities of the certificate, such as renegotiation, which if not set correctly according to the expected requirements of the SSL proxy, might lead to the certificate being unsupported.

Renegotiation settings are critical in ensuring secure connections, and mismatches in configuration can result in errors.

Option D. The SSL proxy certificate ID does not exist.

If the certificate ID being referred to in the SSL proxy profile does not exist in the device's certificate store or is incorrectly referenced, the system will be unable to apply the configuration, leading to an error during the commit operation. This situation would typically result in an error indicating that the system can't find or recognize the specified certificate ID.

NEW QUESTION # 102

You are preparing a proposal for a new customer who has submitted the following requirements for a vSRX deployment:

- globally distributed,
- rapid provisioning,
- scale based on demand,
- and low CapEx.

Which solution satisfies these requirements?

- A. Juniper ATP Cloud
- B. Network Director
- C. VMWare ESXi
- D. AWS

Answer: D

Explanation:

The solution that satisfies the requirements for a vSRX deployment is AWS. AWS (Amazon Web Services) is a cloud computing platform that provides on-demand services such as infrastructure, platform, software, and database as a service. AWS is globally distributed, meaning that it has data centers in multiple regions around the world. AWS also allows rapid provisioning, meaning that you can launch vSRX instances in minutes using preconfigured Amazon Machine Images (AMIs) or custom templates. AWS also enables scaling based on demand, meaning that you can adjust the number and size of vSRX instances according to your network traffic and performance needs. AWS also has low CapEx (capital expenditure), meaning that you only pay for what you use and do not need to invest in hardware or maintenance costs.

NEW QUESTION # 103

When a security policy is modified, which statement is correct about the default behavior for active sessions allowed by that policy?

- A. Only policy changes that involve modification of the action field will cause the active sessions affected by the change to be dropped.
- B. The active sessions allowed by the policy will be dropped.
- C. Only policy changes that involve modification of the application will cause the active sessions affected by the change to be dropped.
- D. The active sessions allowed by the policy will continue unchanged.

Answer: D

Explanation:

When you modify a security policy on the SRX Series device, the default behavior is that the existing sessions that match the policy will continue unchanged. This means that the policy modification will only affect new sessions that are initiated after the change. However, you can change this behavior by using the clear-policy-session command, which will clear all the sessions that match the modified policy and force them to re-evaluate the new policy. NEW QUESTION # 104

Which two statements are correct about chassis clustering? (Choose two.)

- A. The node ID is used to identify each device in the chassis cluster.
- B. The node ID value ranges from 1 to 255.
- C. The cluster ID is used to identify each device in the chassis cluster.
- D. A system reboot is required to activate changes to the cluster.

Answer: A,D

Explanation:

In chassis clustering, the node ID is indeed used to uniquely identify each device within the cluster. This allows for individual addressing and management of devices within the cluster configuration, which is crucial for operations and maintenance.

Typically, activating changes that involve chassis clustering configuration, such as setting or changing the node ID or forming a new cluster, requires a reboot of the devices. This ensures that all configuration changes are properly applied and that the devices can synchronize their states as part of the cluster.

NEW QUESTION # 105

Which two devices would you use for DDoS protection with Policy Enforcer? (Choose two.)

- A. vMX
- B. MX
- C. QFX
- D. vQFX

Answer: A,B

Explanation:

The MX and vMX devices can be used for DDoS protection with Policy Enforcer. Policy Enforcer is a Juniper Networks solution that provides real-time protection from DDoS attacks. It can be used to detect and block malicious traffic, and also provides granular control over user access and policy enforcement.

The MX and vMX devices are well-suited for use with Policy Enforcer due to their high-performance hardware and advanced security features.

NEW QUESTION # 106

.....

How our JN0-336 study questions can help you successfully pass your coming JN0-336 exam? The answer lies in the outstanding JN0-336 exam materials prepared by our best industry professionals and tested by our faithful clients. Our exam materials own the most authentic and useful information in questions and answers. For our JN0-336 practice material have been designed based on the format of real exam questions and answers that you would surely find better than the other exam vendors'.
