Pass Guaranteed Quiz 2026 Splunk SPLK-2003 Latest Valid Exam Bootcamp

Our product boosts three versions which include PDF version, PC version and APP online version. The Splunk Phantom Certified Admin test guide is highly efficient and the forms of the answers and questions are the same. Different version boosts their own feature and using method, and the client can choose the most convenient method. For example, PDF format of SPLK-2003 guide torrent is printable and boosts instant access to download. You can learn at any time, and you can update the SPLK-2003 Exam Questions freely in any day of one year. It provides free PDF demo. You can learn the APP online version of SPLK-2003 guide torrent in your computer, cellphone, laptop or other set. Every version has their advantages so you can choose the most suitable method of Splunk Phantom Certified Admin test guide to prepare the exam. Believe us that we can bring you the service of high quality and make you satisfied.

Splunk SPLK-2003 certification exam is a comprehensive evaluation of a candidate's knowledge and skills in Splunk Phantom administration. It covers a wide range of topics related to setting up, configuring, and managing Splunk Phantom. Splunk Phantom Certified Admin certification is aimed at IT professionals who are responsible for managing the platform in an enterprise environment and is a valuable credential for those looking to advance their career in the field of security operations and incident response.

Splunk SPLK-2003 (Splunk Phantom Certified Admin) Exam is an essential certification for professionals who want to demonstrate their proficiency in the administration of Splunk Phantom. Splunk Phantom Certified Admin certification exam covers various topics such as playbook management, automation workflows, and integration with other security tools. Passing the exam will provide candidates with an opportunity to enhance their career prospects and showcase their skills in the field of cybersecurity.

Splunk Phantom Certified Admin Sample Questions (Q31-Q36):

NEW QUESTION # 31

To limit the impact of custom code on the VPE, where should the custom code be placed?

- A. A custom function block.
- B. A separate container.

- C. A custom container or a separate KV store.
- D. A separate code repository.

Answer: A

Explanation:

To limit the impact of custom code on the Visual Playbook Editor (VPE) in Splunk SOAR, custom code should be placed within a custom function block. Custom function blocks are designed to encapsulate code within a playbook, allowing users to input their own Python code and execute it as part of the playbook run. By confining custom code to these blocks, it maintains the VPE's performance and stability by isolating the custom code from the core functions of the playbook.

A custom function block is a way of adding custom Python code to your playbook, which can expand the functionality and processing of your playbook logic. Custom functions can also interact with the REST API in a customizable way. You can share custom functions across your team and across multiple playbooks to increase collaboration and efficiency. To create custom functions, you must have Edit Code permissions, which can be configured by an Administrator in Administration > User Management > Roles and Permissions.

NEW QUESTION # 32

If no data matches any filter conditions, what is the next block run by the playbook?

- A. The next block.
- B. The filter block.
- C. The start block.
- D. The end block.

Answer: D

Explanation:

In Splunk SOAR (formerly Phantom), when a playbook is running and it encounters a filter block, if no data matches the filter conditions specified, the playbook will proceed to the end block. The end block signifies the completion of the playbook's execution path that was contingent on the filter conditions being met. If the filter conditions are not met, and there are no alternative paths specified, the playbook recognizes this as the logical conclusion of that particular execution flow.

NEW QUESTION # 33

Under Asset Ingestion Settings, how many labels must be applied when configuring an asset?

- A. One or more.
- B. Zero or more.
- C. Labels are not configured under Asset Ingestion Settings.
- D. One.

Answer: B

Explanation:

Under Asset Ingestion Settings in Splunk SOAR, when configuring an asset, the number of labels that must be applied can be zero or more. Labels are optional and are used to categorize data and control access. They are not a requirement under Asset Ingestion Settings, but they can be used to enhance organization and filtering if chosen.

NEW QUESTION # 34

In this image, which container fields are searched for the text "Malware"?

□

- A. Event Name or ID.
- B. Event Name, Notes, Comments.
- C. Event Name and Artifact Names.

Answer: C

Explanation:

The image shows a user interface of "splunk>phantom" with a search bar at the top, where a search for "Malware" has been

initiated. The tabs labeled "Events," "Indicators," "Cases," and "Tasks" suggest that the search functionality could span across various container fields within the Splunk SOAR environment. Typically, the search would include fields that are most relevant to the user's query, which in this case, are likely to be the Event Name and Artifact Names. These fields are central to identifying and categorizing events and artifacts within Splunk SOAR, making them primary targets for a search term like "Malware" which is commonly associated with security events and indicators.

NEW QUESTION # 35

Without customizing container status within Phantom, what are the three types of status for a container?

- A. Mew, Open, Resolved
- B. New, In Progress, Closed
- C. Low, Medium, High
- D. Low, Medium, Critical

Answer: A

Explanation:

Explanation

The correct answer is C because without customizing container status within Phantom, the three types of status for a container are New, Open, and Resolved. A container is a data object that represents an event or incident that needs to be investigated or remediated. A container has a status attribute that indicates its current state. The default values for the status attribute are New, Open, and Resolved. New means that the container has been created but not yet processed. Open means that the container is being processed by a playbook or a user. Resolved means that the container has been processed and closed. You can customize the container status values in the Phantom UI by going to Administration > Product Settings > Container Status. See Splunk SOAR Documentation for more details.
