

# WRT Exam Learning, Test WRT King

## WRT EXAM STUDY GUIDE | 100% Correct | Verified | 2024 Version

1 cubic foot of water contains \_\_\_\_\_ gallons - ✓✓7.48

one gallon of water weighs \_\_\_\_\_ pounds - ✓✓8.34

The most critical course of action in restorative drying is to \_\_\_\_\_ - ✓✓Respond Quickly

All restorers should follow the standard of care for the water restoration profession developed by the restoration industry entitled the IICRC \_\_\_\_\_ - ✓✓S500

To help protect technicians from the many hazards associated with contaminated water losses, restorers need to have ready access to several items. These items protect for all \_\_\_\_\_ to the body - ✓✓potential exposures

Respiratory protection regulations state that the employer must provide

1. \_\_\_\_\_

2. \_\_\_\_\_

3. \_\_\_\_\_ - ✓✓medical eval

fit testing

training

as a minimum medical requirement, technicians performing water damage restoration services need medical consultation with their \_\_\_\_\_ for appropriate immunizations - ✓✓Primary health care physician

The contract clearly states the agreement between the building owner and the restoration contractor. The form specifies who is responsible for payment and should be signed \_\_\_\_\_ work begins - ✓✓Before

2026 Latest Itcerttest WRT PDF Dumps and WRT Exam Engine Free Share: <https://drive.google.com/open?id=1aRJG5C6vI5OUdTvl7uK-EpsJjKdmZCGK>

If you buy WRT study materials, you will get more than just a question bank. You will also get our meticulous after-sales service. The purpose of the WRT study materials' team is not to sell the materials, but to allow all customers who have purchased WRT study materials to pass the exam smoothly. The trust and praise of the customers is what we most want. We will accompany you throughout the review process from the moment you buy WRT Study Materials. We will provide you with 24 hours of free online services. All our team of experts and service staff are waiting for your mail all the time.

You can also trust Itcerttest WRT exam practice questions and start preparation with complete peace of mind and satisfaction. The WRT Exam Questions are designed and verified by experienced and renowned IICRC exam trainers. They work collectively and strive hard to ensure the top quality of WRT Exam Practice questions all the time.

## Test WRT King | Practice WRT Test Online

To attempt the IICRC WRT exam optimally and ace it on the first attempt, proper exam planning is crucial. Since the IICRC WRT exam demands a lot of time and effort, we designed the Water Damage Restoration Technician (WRT) (WRT) exam dumps in such a way that you won't have to go through sleepless study nights or disturb your schedule. Before starting the IICRC WRT Preparation, plan the amount of time you will allot to each topic, determine the topics that demand more effort and prioritize the

components that possess more weightage in the IICRC WRT exam.

## IICRC Water Damage Restoration Technician (WRT) Sample Questions (Q72-Q77):

### NEW QUESTION # 72

How can a restorer minimize damage and reduce drying time?

- A. By disengaging baseboards and saving for adjuster's inspection
- B. By applying an antimicrobial (biocide) to control odor development
- C. By contacting an insurance adjuster and waiting for their authorization
- **D. By beginning mitigation as soon as safely possible**

**Answer: D**

Explanation:

The IICRC WRT body of knowledge clearly identifies time as one of the most critical variables influencing the extent of damage in a water loss. The longer materials remain wet, the greater the likelihood of primary damage, secondary damage, and microbial amplification. For this reason, the WRT standard emphasizes that mitigation activities should begin as soon as it is safe to do so, following an initial hazard assessment.

Beginning mitigation promptly limits moisture migration, reduces absorption into hygroscopic materials, and decreases the duration materials remain above safe moisture thresholds. Early actions such as stopping the water source, removing bulk water, and initiating controlled drying significantly reduce structural deterioration and restoration costs. The WRT manual repeatedly reinforces that delays increase damage, regardless of water category or class.

Waiting for adjuster authorization or focusing on antimicrobial use before drying does not align with the standard of care.

Antimicrobials are supplemental and do not replace drying. Likewise, baseboard removal may be necessary but is not the primary factor in minimizing drying time.

The ANSI/IICRC S500 standard supports emergency mitigation to prevent further damage and explicitly recognizes that restorers may need to act before third-party approvals when necessary to protect the structure and occupants. Prompt mitigation is therefore both a technical and professional responsibility.

### NEW QUESTION # 73

What should a restorer do when there is contamination (e.g., Category 2, Category 3, Mold) on a water damage restoration project to protect workers and occupants?

- A. Wipe down the contamination with detergent cleaner
- **B. Use appropriate PPE, containment, or other engineering controls**
- C. Fog a water-based disinfectant into the affected area
- D. Call the insurance company and discuss costs

**Answer: B**

Explanation:

The IICRC WRT body of knowledge emphasizes that when contamination is present, the restorer's responsibility is to protect workers and occupants by implementing appropriate controls. This includes the use of personal protective equipment (PPE), containment systems, and engineering or administrative controls as dictated by the hazard assessment.

Category 2 and Category 3 water, as well as mold-contaminated environments, can expose individuals to microorganisms, allergens, and other harmful agents. The WRT manual reinforces the hierarchy of controls:

eliminate hazards when possible, isolate hazards through containment, and protect workers with PPE when hazards cannot be fully removed.

Fogging disinfectants or wiping surfaces does not eliminate airborne or surface hazards and may actually increase aerosolization if done improperly. Contacting the insurance company is an administrative step and does not mitigate health risks.

The WRT curriculum also aligns with OSHA principles, stressing that safety controls must be implemented before and during restoration activities. Proper containment and PPE selection are essential to prevent cross-contamination and protect both restoration personnel and building occupants.

### NEW QUESTION # 74

What happens when the surface temperature of a material is at or below the dew point temperature of the air?

- A. Sublimation
- **B. Condensation**
- C. Evaporation
- D. Dehumidification

**Answer: B**

Explanation:

According to the IICRC WRT body of knowledge, condensation occurs when the surface temperature of a material is at or below the dew point temperature of the surrounding air. Under these conditions, the air can no longer hold all of its water vapor, and moisture changes phase from vapor to liquid on the cooler surface.

This principle is fundamental to psychrometry and is directly applicable to water damage restoration. The WRT manual emphasizes that condensation represents a moisture gain, not moisture removal, and therefore counteracts drying efforts. When condensation occurs on structural materials, it can increase moisture content, prolong drying time, and contribute to secondary damage such as microbial growth or corrosion.

Restorers are trained to compare indoor air dew point measurements with surface temperatures of materials using thermohygrometers and infrared thermometers. If surface temperatures are below the dew point, corrective action—such as increasing temperature, improving dehumidification, or adjusting airflow—is required.

This concept also explains why cold surfaces like metal framing, concrete, or supply ductwork can develop moisture even without direct water exposure. The WRT curriculum stresses proactive monitoring to prevent unintended condensation events during drying.

#### **NEW QUESTION # 75**

Which of the following regulated hazardous materials require compliance with federal and local laws and regulations to remove or repair?

- **A. Lead-based paint and asbestos-containing adhesive**
- B. Vinyl composition tile and luxury vinyl tile
- C. Hardboard and medium-density fiberboard
- D. Acoustical tiles and gypsum board

**Answer: A**

Explanation:

The IICRC WRT body of knowledge explicitly recognizes lead-based paint and asbestos-containing materials as regulated hazardous materials that require compliance with federal, state, and local laws when disturbed, removed, or repaired. These materials pose significant health risks when fibers or particles become airborne and are therefore subject to strict regulatory oversight.

Lead-based paint, commonly found in structures built before regulatory bans, can produce hazardous dust during demolition or sanding. Asbestos-containing adhesives, mastics, or building materials can release microscopic fibers when disturbed, leading to long-term respiratory disease risks. The WRT manual emphasizes that restoration technicians must not disturb regulated materials unless they are properly trained, certified, and authorized to do so, or unless licensed specialists are retained.

The presence of regulated materials must be identified during the initial inspection and hazard assessment, and work plans must be adjusted accordingly. Failure to comply with applicable regulations can result in serious legal liability, fines, and health consequences. Other listed materials—such as gypsum board, MDF, or vinyl flooring—may require removal due to water damage but are not inherently regulated hazardous materials under federal law. The WRT standard reinforces that compliance with environmental and occupational safety regulations is a non-negotiable component of professional restoration practice.

#### **NEW QUESTION # 76**

How shall a restorer dispose of wastewater?

- A. As required by AHAM
- B. As defined in the ANSI/IICRC S520
- **C. Per applicable laws and regulations**
- D. In accordance with OSHA 29 CFR

**Answer: C**

Explanation:

The IICRC WRT body of knowledge states that wastewater generated during water damage restoration must be disposed of in

accordance with applicable local, state, and federal laws and regulations. Wastewater may contain contaminants, sediments, microorganisms, or chemical residues, and improper disposal can create environmental and public health risks.

The WRT manual emphasizes that restorers are responsible for understanding disposal requirements within the jurisdiction where work is performed. These requirements may regulate where wastewater can be discharged (e.g., sanitary sewer systems) and prohibit disposal into storm drains, onto soil, or into surface waters. Disposal practices may also vary depending on contamination category, such as sewage or chemically contaminated water.

OSHA regulations focus on worker safety, not wastewater disposal. AHAM standards apply to appliance performance testing, not environmental disposal. ANSI/IICRC S520 addresses mold remediation, not wastewater handling. Therefore, none of those documents define wastewater disposal requirements.

By following applicable laws and regulations, restorers ensure environmental compliance, protect public infrastructure, and reduce legal liability. This requirement reflects the WRT emphasis on regulatory awareness and responsible professional conduct.

## NEW QUESTION # 77

.....

Itcerttest assists people in better understanding, studying, and passing more difficult certification exams. We take pride in successfully servicing industry experts by always delivering safe and dependable WRT exam preparation materials. For your convenience, Itcerttest has prepared authentic Water Damage Restoration Technician (WRT) (WRT) exam study material based on a real exam syllabus to help candidates go through their WRT exams.
