

NCP-DB-6.10 Valid Braindumps Book | Reliable NCP-DB-6.10 Test Vce

VerifiedDumps delivers up to date NCP-DB-6.10 exam products and modify them time to time. Latest NCP-DB-6.10 exam questions are assembled in our practice test modernizes your way of learning and replaces the burdensome preparation techniques with flexible learning. We accord you an actual exam environment simulated through our practice test sessions that proves beneficial for NCP-DB-6.10 Exams preparation. Our NCP-DB-6.10 practice tests provide you knowledge and confidence simultaneously. Candidates who run across the extensive search, VerifiedDumps products are the remedy for their worries. Once you have chosen for our NCP-DB-6.10 practice test products, no more resources are required for exam preparation.

Nutanix NCP-DB-6.10 Exam Syllabus Topics:

Section	Weight	Objectives
Monitor, Optimize and Troubleshoot	20%	- Monitor performance, alerts and resource usage - Optimize configurations and workloads - Troubleshoot common issues and errors
Administer and Automate NDB	15%	- Manage profiles, software versions and updates - Maintain multi-cluster environments - Use APIs, CLI and automation tools
Deploy and Configure an NDB Solution	20%	- Register clusters, database servers and engines - Configure networking, security and access control - Install and configure NDB server and agents
Provision and Manage Database Lifecycle	20%	- Apply patches and upgrades - Manage clones, snapshots and refresh operations - Create, modify and delete databases
Protect Databases with Time Machine	15%	- Perform restore and point-in-time recovery - Configure SLA policies and retention
Describe NDB Concepts	10%	- Define NDB terminology and components - Explain features, use cases and business value

Reliable NCP-DB-6.10 Test Vce | NCP-DB-6.10 Valid Test Guide

With the help of NCP-DB-6.10 study materials, you can conduct targeted review on the topics which to be tested before the exam, and then you no longer have to worry about the problems that you may encounter a question that you are not familiar with during the exam. With NCP-DB-6.10 study materials, you will not need to purchase any other review materials. We have hired professional IT staff to maintain NCP-DB-6.10 Study Materials and our team of experts also constantly updates and renew the question bank according to changes in the syllabus.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10

Sample Questions (Q37-Q42):

NEW QUESTION # 37

A database administrator wants to define initialization variables for different types of database engines and workloads, like OLTP and DW.

What type of profile would be used?

- A. Compute
- **B. Database Parameters**
- C. Network
- D. Software Profile Version

Answer: B

Explanation:

The database parameters profile is used to define the initialization variables for different types of database engines and workloads, such as OLTP and DW. The database parameters profile allows the database administrator to customize the configuration settings for each database engine, such as Oracle, SQL Server, PostgreSQL, and MySQL. The database parameters profile can also be applied to different database operations, such as provisioning, cloning, and patching.

The database parameters profile helps to optimize the performance and functionality of the databases according to the specific requirements and best practices of each database engine and workload. The software profile version is used to define the software version and edition for each database engine, such as Oracle 19c Enterprise Edition or SQL Server 2019 Standard Edition. The software profile version is required for provisioning new databases and patching existing databases. The software profile version helps to ensure the compatibility and compliance of the databases with the supported software versions and editions.

The network profile is used to define the network configuration and security settings for the database server VMs and the databases, such as the IP address, subnet mask, gateway, DNS, firewall rules, and SSL certificates. The network profile is required for registering new database server VMs and provisioning new databases. The network profile helps to ensure the connectivity and protection of the database server VMs and the databases within the network environment.

The compute profile is used to define the compute resources and storage policies for the database server VMs and the databases, such as the CPU, memory, disk size, disk type, compression, deduplication, and replication factor. The compute profile is required for provisioning new databases and cloning existing databases. The compute profile helps to ensure the availability and efficiency of the database server VMs and the databases within the Nutanix cluster.

NEW QUESTION # 38

During maintenance, a team wants to power off the repository VM. The VM is not the primary or synchronized copy node. What is the expected outcome?

- A. NDB services will fail over immediately.
- **B. There will be no service interruption.**
- C. The HAProxy VMs will failover instead.
- D. Manual interaction will be required to restore service.

Answer: B

Explanation:

In an NDB environment, the repository VM stores metadata and configuration data but is not a critical runtime component for service availability. If the team powers off the repository VM during maintenance, and it is neither the primary nor a synchronized copy node, the NDB service will continue to operate without interruption. NDB's high availability (HA) architecture, managed by HAProxy and other components, ensures redundancy and failover capabilities, allowing the system to rely on the primary and synchronized nodes. The repository VM's downtime only affects metadata access, which can be restored post-maintenance without impacting ongoing database operations.

NEW QUESTION # 39

To isolate resources and restrict access among different teams or projects in NDB, what should be used?

- A. Software Profile
- **B. Projects with Role-Based Access Control (RBAC)**
- C. Network Policy
- D. Compute Profile

Answer: B

Explanation:

Prism Central Projects combined with RBAC enable proper multi-tenant separation and access control in NDB environments.

NEW QUESTION # 40

Which action must an administrator take in Era Networks before using Era to provision a MSSQL AG cluster?

- A. A that has a static pool managed by Era must be configured.
- B. A network that has a DHCP pool must be configured in Era.
- C. A network in each data center must be configured for Era.
- **D. A private network must be configured in Era for the heartbeat traffic.**

Answer: D

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, before using Era to provision a MSSQL AG cluster, an administrator must configure a private network in Era for the heartbeat traffic. This is because the heartbeat traffic is crucial for maintaining the health and status of the MSSQL AG cluster. The heartbeat traffic is used by the nodes in the cluster to communicate with each other and check the status of the other nodes. If a node does not receive a heartbeat from another node within a certain time frame, it assumes that the other node has failed and takes appropriate action.

NEW QUESTION # 41

An administrator wants to test the provisioning capabilities after a new NDB deployment. Which database instance would be available to accomplish this task?

- A. Oracle DB
- B. MongoDB
- C. MSSQL Server
- **D. PostgreSQL**

Answer: D

Explanation:

After a new NDB deployment, the administrator can test the provisioning capabilities using a database instance that is fully supported and readily configurable out of the box. PostgreSQL is the most suitable option because it is one of the core database engines supported by NDB from the initial deployment, with built-in provisioning templates and HA capabilities. NDB provides a streamlined process to provision PostgreSQL instances, making it an ideal choice for testing provisioning workflows, including VM creation, storage allocation, and network configuration.

NEW QUESTION # 42

.....

In the world in which the competition is constantly intensifying, owning the excellent abilities in some certain area and profound knowledge can make you own a high social status and establish yourself in the society. Passing the test NCP-DB-6.10 certification can help you realize your goal and find an ideal job. Buying our NCP-DB-6.10 latest question can help you pass the NCP-DB-6.10 exam successfully. Just have a try on our free demo of our NCP-DB-6.10 exam questions, you will love our NCP-DB-6.10 study material!
