NEW QUESTION # 23

An EPG is associated with a VMM domain. Which option must be set to allow the bridge domain and the VRF of the EPG to be instantiated on all leaf switches that discovered the ESXi host?

- A. Immediate Resolution immediacy
- B. Immediate Deployment immediacy
- C. On-Demand Deployment immediacy
- D. On-Demand Resolution immediacy

Answer: C

Explanation:

Setting the EPG's Deployment immediacy to On-Demand ensures that the bridge domain and VRF are only pushed down to - and instantiated on - the leaf switches that actually see the ESXi host, rather than all leaves up front.

NEW QUESTION # 24

Cisco ACI fabric must detect all silent endpoints for the Layer 3 bridge domain. Which actions accomplish this goal?

- A. Disable Unicast Routing.
Enable L2 Unknown Unicast Flood.
- B. Disable Unicast Routing.
Enable L2 Unknown Unicast Hardware Proxy.
- C. Enable Unicast Routing. Enable ARP Flooding.
- **D. Enable Unicast Routing. Disable ARP Flooding.**

Answer: D

NEW QUESTION # 25

An engineer needs to deploy a leaf access port policy group in ACI Fabric to support the following requirements:

* Control the amount of application data flowing into the system

* Allow the newly connected device to auto-negotiate link speed with the leaf switch Which two ACI policies must be configured to achieve these requirements? (Choose two.)

- A. slow drain policy
- B. L2 interface policy
- **C. ingress data plane policing policy**
- **D. link level policy**
- E. ingress control plane policing policy

Answer: C,D

Explanation:

To deploy a leaf access port policy group in ACI Fabric that controls the amount of application data flowing into the system and allows auto-negotiation of link speed, the two ACI policies that must be configured are:

Link level policy2.

Ingress data plane policing policy2.

Slow Drain handles FCoE packets that are causing traffic congestion on ACI fabric. So, it is wrong.

Ingress control plane is wrong, because the request is for "application data flowing".

L2 interface policy is concerned about QinQ and VLAN scope.

NEW QUESTION # 26

A Cisco ACI fabric is integrated with a Cisco ASA firewall using a service graph under the tenant called Operations. The fabric must permit the firewall used on tenant Operations to be referenced by the tenant called Management. Which export action must be used to accomplish this goal?

- **A. Layer4-Layer7 device**
- B. router configurations
- C. service graph template
- D. device selection policies

Answer: A

Explanation:

L4-L7 device can't be referenced from other tenants. If you want to share an L4-L7 device with other tenants, you need to export the L4-L7 device to other tenants. It will appear as an imported device in the other tenants.
