D-ISM-FN-01 Test Dumps Free & D-ISM-FN-01 Top Exam Dumps

With over a decade's business experience, our D-ISM-FN-01 test torrent attached great importance to customers' purchasing rights all along. There is no need to worry about virus on buying electronic products. For we make endless efforts to assess and evaluate our D-ISM-FN-01 exam prep' reliability for a long time and put forward a guaranteed purchasing scheme, we have created an absolutely safe environment and our D-ISM-FN-01 Exam Question are free of virus attack. If there is any doubt about it, professional personnel will handle this at first time, and you can also have their remotely online guidance to install and use our D-ISM-FN-01 test torrent.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10

Question:

A company is experiencing a sudden surge in website traffic due to a successful marketing campaign. The company's IT infrastructure is struggling to cope with the increased demand, and the website is slowing down. Which cloud computing characteristic would be beneficial in this situation?

- A. Measured service
- B. Resource pooling
- **C. Rapid elasticity**
- D. On-demand self-service

Answer: C

Explanation:

Rapid elasticity is a cloud computing characteristic that allows resources to be scaled up or down quickly and automatically, depending on demand. In the scenario of a sudden traffic surge, rapid elasticity enables the infrastructure to handle increased loads without manual intervention.

* Measured service: Refers to monitoring and billing based on resource usage.

* On-demand self-service: Allows users to provision resources as needed.

* Resource pooling: Involves sharing resources among multiple users.

NEW QUESTION # 11

Question:

What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Reduces required maintenance time for IT resources
- B. Reduces the cost of protecting data
- **C. Maximizes application and information availability**
- D. Avoids security risks that expose business data

Answer: C

Explanation:

Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensure maximum application and information availability. They protect data in the event of:

* Local failures (disk, server, or site outages)

* Natural disasters (floods, fires)

* Ransomware attacks

By having off-site copies and failover options, businesses maintain continuous access to critical data.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Information Availability Techniques.

NEW QUESTION # 12

Question:

An IT department needs to execute automated tasks to perform a business operation. They require workflows for arranging, coordinating, and managing these tasks. Which layer of the Modern Data Center Architecture provides this functionality?

- **A. Orchestration**
- B. Services
- C. Physical infrastructure
- D. Virtual infrastructure

Answer: A

Explanation:

The orchestration layer in a modern data center architecture is responsible for automating and coordinating complex tasks and workflows. It enables the integration and management of various services and resources to perform business operations efficiently.

* Physical infrastructure: Comprises the hardware components.

* Virtual infrastructure: Includes virtualized resources like VMs.

* Services: Deliver specific functionalities to end-users.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Modern Data Center Architecture.

NEW QUESTION # 13

Question:

A customer uses FCIP to connect local and remote FC SANs. The remote SAN is replicated to and used to store daily backup data. Latency over the IP WAN increases to unacceptable levels during peak replication periods. No other data transfer services using the WAN experience the same latency problem.

What is the likely cause of the data replication performance issue?

- A. Ethernet frame segmentation
- B. FCIP gateway FC ports set to EX_Port mode
- **C. IP packet segmentation**
- D. FCIP gateway FC ports set to TE_Port mode

Answer: C

Explanation:

IP packet segmentation can cause replication performance issues over the WAN.

Since FCIP tunnels FC frames over IP networks, if the IP packet size exceeds the MTU, packets are fragmented and reassembled, increasing latency.

* TE_Port mode is used for trunking, not related to packet fragmentation.

* EX_Port mode is used for inter-switch connectivity (FCR).

* Ethernet frame segmentation is not relevant in FCIP tunneling.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: FCIP and IP WAN Connectivity.

NEW QUESTION # 14

Question:

What is an advantage of deploying intelligent storage systems in the data center?

- **A. Enables efficient and optimized storage and management of information**
- B. Migrates data from a data center to the cloud at no cost
- C. Reduces the complexity of managing information by creating silos of storage
- D. Reduces the amount of data to replicate, migrate, and back up

Answer: A

Explanation:

Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.

* Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.

* Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.

* Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.
