XDR-Analyst Tesking Torrent - XDR-Analyst Pdf Questions & XDR-Analyst Practice Training

So rest assured that you will get top-notch and easy-to-use Palo Alto Networks XDR-Analyst practice questions. The Palo Alto Networks XDR Analyst (XDR-Analyst) PDF dumps file is the PDF version of real Palo Alto Networks XDR Analyst (XDR-Analyst) exam questions that work with all devices and operating systems. Just download the Palo Alto Networks XDR Analyst (XDR-Analyst) PDF dumps file and start the Palo Alto Networks XDR Analyst (XDR-Analyst) exam questions preparation right now. Whereas the other two Palo Alto Networks XDR Analyst (XDR-Analyst) practice test software is concerned, both are the mock Palo Alto Networks XDR-Analyst exam dumps and help you to provide the real-time Palo Alto Networks XDR Analyst (XDR-Analyst) exam environment for preparation.

Our XDR-Analyst training dumps are deemed as a highly genius invention so all exam candidates who choose our XDR-Analyst exam questions have analogous feeling that high quality our practice materials is different from other practice materials in the market. So our XDR-Analyst study braindumps are a valuable invest which cost only tens of dollars but will bring you permanent reward. So many our customers have benefited form our XDR-Analyst preparation quiz, so will you!

XDR-Analyst Exam Questions and Palo Alto Networks XDR Analyst Torrent Prep - XDR-Analyst Test Guide

Though our XDR-Analyst training guide is proved to have high pass rate, but If you try our XDR-Analyst exam questions but fail in the final exam, we can refund the fees in full only if you provide us with a transcript or other proof that you failed the exam. We believe that our business will last only if we treat our customers with sincerity and considerate service. So, please give the XDR-Analyst Study Materials a chance to help you.

Palo Alto Networks XDR Analyst Sample Questions (Q87-Q92):

NEW QUESTION # 87
What types of actions you can execute with live terminal session?

- A. Manage Processes, Manage Files, Run Operating System Commands, Run Ruby Commands and Scripts

- B. Manage Processes, Manage Files, Run Operating System Commands, Run Python Commands and Scripts
- C. Apply patches, Reboot System, send notification for end user, Run Python Commands and Scripts
- D. Manage Network configurations, Quarantine Files, Run PowerShell scripts

Answer: B

Explanation:
Live terminal session is a feature of Cortex XDR that allows you to remotely access and control endpoints from the Cortex XDR console. With live terminal session, you can execute various actions on the endpoints, such as:
Manage Processes: You can view, start, or kill processes on the endpoint, and monitor their CPU and memory usage.
Manage Files: You can view, create, delete, or move files and folders on the endpoint, and upload or download files to or from the endpoint.
Run Operating System Commands: You can run commands on the endpoint using the native command-line interface of the operating system, such as cmd.exe for Windows, bash for Linux, or zsh for macOS.
Run Python Commands and Scripts: You can run Python commands and scripts on the endpoint using the Python interpreter embedded in the Cortex XDR agent. You can use the Python commands and scripts to perform advanced tasks or automation on the endpoint.
Reference:
Initiate a Live Terminal Session
Manage Processes
Manage Files
Run Operating System Commands
Run Python Commands and Scripts

NEW QUESTION # 88
When investigating security events, which feature in Cortex XDR is useful for reverting the changes on the endpoint?

- A. Remediation Suggestions
- B. Machine Remediation
- C. Remediation Automation
- D. Automatic Remediation

Answer: A

Explanation:
When investigating security events, the feature in Cortex XDR that is useful for reverting the changes on the endpoint is Remediation Suggestions. Remediation Suggestions are a feature of Cortex XDR that provide you with recommended actions to undo the effects of malicious activity on your endpoints. You can view the remediation suggestions for each alert or incident in the Cortex XDR console, and decide whether to apply them or not. Remediation Suggestions can help you restore the endpoint to its original state, remove malicious files or processes, or fix registry or system settings. Remediation Suggestions are based on the forensic data collected by the Cortex XDR agent and the analysis performed by Cortex XDR. Reference:
Remediation Suggestions
Apply Remediation Suggestions

NEW QUESTION # 89
What is by far the most common tactic used by ransomware to shut down a victim's operation?

- A. restricting access to administrative accounts to the victim
- B. preventing the victim from being able to access APIs to cripple infrastructure
- C. encrypting certain files to prevent access by the victim
- D. denying traffic out of the victims network until payment is received

Answer: C

Explanation:
Ransomware is a type of malicious software, or malware, that encrypts certain files or data on the victim's system or network and prevents them from accessing their data until they pay a ransom. This is by far the most common tactic used by ransomware to shut down a victim's operation, as it can cause costly disruptions, data loss, and reputational damage. Ransomware can affect individual users, businesses, and organizations of all kinds. Ransomware can spread through various methods, such as phishing emails,

malicious attachments, compromised websites, or network vulnerabilities. Some ransomware variants can also self-propagate and infect other devices or networks. Ransomware authors typically demand payment in cryptocurrency or other untraceable methods, and may threaten to delete or expose the encrypted data if the ransom is not paid within a certain time frame. However, paying the ransom does not guarantee that the files will be decrypted or that the attackers will not target the victim again. Therefore, the best way to protect against ransomware is to prevent infection in the first place, and to have a backup of the data in case of an attack1234 Reference:

NEW QUESTION # 90
After scan, how does file quarantine function work on an endpoint?

- A. Quarantine takes ownership of the files and folders and prevents execution through access control.
- B. Quarantine disables the network adapters and locks down access preventing any communications with the endpoint.
- C. Quarantine removes a specific file from its location on a local or removable drive to a protected folder and prevents it from being executed.
- D. Quarantine prevents an endpoint from communicating with anything besides the listed exceptions in the agent profile and Cortex XDR.

Answer: C

Explanation:
Quarantine is a feature of Cortex XDR that allows you to isolate a malicious file from its original location and prevent it from being executed. Quarantine works by moving the file to a protected folder on the endpoint and changing its permissions and attributes. Quarantine can be applied to files detected by periodic scans or by behavioral threat protection (BTP) rules. Quarantine is only supported for portable executable (PE) and dynamic link library (DLL) files. Quarantine does not affect the network connectivity or the communication of the endpoint with Cortex XDR. Reference:
Quarantine Malicious Files
Manage Quarantined Files

NEW QUESTION # 91
What are two purposes of "Respond to Malicious Causality Chains" in a Cortex XDR Windows Malware profile? (Choose two.)

- A. Automatically kill the processes involved in malicious activity.
- B. Automatically terminate the threads involved in malicious activity.
- C. Automatically block the IP addresses involved in malicious traffic.
- D. Automatically close the connections involved in malicious traffic.

Answer: A,C

Explanation:
The "Respond to Malicious Causality Chains" feature in a Cortex XDR Windows Malware profile allows the agent to take automatic actions against network connections and processes that are involved in malicious activity on the endpoint. The feature has two modes: Block IP Address and Kill Process1.
The two purposes of "Respond to Malicious Causality Chains" in a Cortex XDR Windows Malware profile are:
Automatically kill the processes involved in malicious activity. This can help to stop the malware from spreading or doing any further damage.
Automatically block the IP addresses involved in malicious traffic. This can help to prevent the malware from communicating with its command and control server or other malicious hosts.
The other two options, automatically close the connections involved in malicious traffic and automatically terminate the threads involved in malicious activity, are not specific to "Respond to Malicious Causality Chains". They are general security measures that the agent can perform regardless of the feature.
