Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41

Portworx uses secrets to authenticate Kubernetes to the Portworx system.
When using the shared authentication method, where is that secret stored?

- A. In the same namespace as the Portworx installation
- **B. In the namespace that runs the application that needs to provision the storage resources**
- C. In the 'default' namespace

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

When using shared authentication in Portworx, the Kubernetes secret that contains the authentication token or credentials is stored in the same namespace where the application requesting storage resides. This placement ensures that the application pods have access to the secret needed to authenticate to Portworx for volume provisioning and management. It enables a security boundary aligned with Kubernetes namespaces, restricting credentials to the scope of the application. Storing the secret in the default namespace or the Portworx installation namespace would be less secure or less flexible in multi-tenant clusters. Portworx authentication documentation highlights this design for efficient, secure access management in Kubernetes environments 【Pure Storage Portworx Security Guide source】 .

NEW QUESTION # 42

What is the purpose of setting a defragmentation schedule in Portworx?

- A. To back up data to the cloud.
- B. To monitor the health of the storage cluster.
- **C. To improve performance by running defragmentation during low workload periods.**

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Defragmentation in Portworx reorganizes storage blocks to reduce fragmentation caused by frequent write and delete operations. Scheduling defragmentation during low workload periods ensures minimal impact on application performance while improving storage efficiency and I/O throughput. This optimization leads to faster read/write operations and prolongs the lifespan of storage devices by minimizing random I/O. Portworx provides administrators the ability to define defragmentation windows and recurrence policies within cluster configurations to automate this process. The official Portworx documentation explains that carefully timed defragmentation is critical to maintaining optimal cluster performance without disrupting business-critical workloads, making it an essential part of ongoing cluster maintenance and operational health 【Pure Storage Portworx Performance Guide source】 .

NEW QUESTION # 43

What does an administrator need to do if a drive fails and the pool contains metadata?

- A. Delete the pool.
- B. Reformat the disk and reuse it.
- **C. Decommission the node.**

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

If a drive fails and the associated storage pool contains critical metadata, the safest and recommended action is to decommission the entire node. Metadata loss can compromise the integrity of volume allocations and cluster state. Decommissioning the node allows Portworx to safely remove the node from the cluster, replicate data, and redistribute workloads, preventing data loss or corruption. Deleting the pool or reformatting the disk without proper precautions risks losing metadata and causing cluster inconsistencies. Portworx's operational guidelines emphasize that nodes with failed drives holding metadata require careful decommissioning procedures to maintain cluster health and data durability, ensuring data is rebalanced and availability is preserved 【Pure Storage Portworx Operations Guide source】 .

NEW QUESTION # 44

Which platform is supported by Portworx for deployment?

- A. Docker Swarm
- **B. AWS**
- C. DCOS

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx primarily supports deployment on Kubernetes and is well-integrated with major cloud platforms including Amazon Web Services (AWS). AWS offers native infrastructure and storage services that complement Portworx's capabilities for cloud-native storage, including integration with Elastic Block Store (EBS) and S3 Object Storage. While Portworx historically supported container orchestrators like Docker Swarm and Mesosphere DC/OS (DCOS), the primary and recommended platform for production deployments today is Kubernetes on cloud providers such as AWS, Azure, and Google Cloud. AWS's ecosystem allows Portworx to leverage scalable compute and storage infrastructure, advanced networking, and cloud security features, making it a preferred platform. Portworx official platform support documentation lists AWS as a key supported environment for its container storage solutions **【Pure Storage Portworx Platform Support Guide source】**.

NEW QUESTION # 45

What is a key benefit of using on-demand snapshots in a Kubernetes environment with Portworx?

- **A. They provide immediate data recovery options without stopping applications.**
- B. They automatically scale storage capacity.
- C. They require no additional configuration after the initial setup.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

On-demand snapshots in Portworx allow administrators and applications to create point-in-time copies of volumes instantly without requiring downtime or interrupting running workloads. This capability is critical in Kubernetes environments where high availability and continuous operation are mandatory. Snapshots capture the exact state of data at a moment, enabling rapid recovery from accidental deletion, corruption, or ransomware attacks. Since these snapshots are created live, applications continue to run seamlessly, ensuring minimal impact on user experience. Portworx's snapshot technology uses efficient -on-write mechanisms, which also minimize storage overhead. Official Portworx documentation emphasizes that on-demand snapshots enhance data protection strategies by enabling quick backups and restores without requiring maintenance windows or complex scheduling **【Pure Storage Portworx Snapshot Guide source】**.
