AP-215認定試験問題には、高品質と効率に加えて、非常に高品質のサービスがあります。AP-215テスト準備を使用すると、能力を向上させながら非常に楽しい経験をすることができます。私たちは常に最初に顧客を提唱しています。あなたの目標を達成するためにAP-215学習教材を使用する場合、私たちは光栄に思います。また、AP-215 pdfファイルにより、学習効率が向上し、限られた時間で最高の結果を得ることができます。AP-215 pdfファイルは、選択する必要がある最高の試験ツールです。

数万人の顧客は私たちのAP-215問題集を利用したら、AP-215試験に合格しました。もちろん、私たちのAP-215問題集を利用したら、唯一の収穫は試験に合格することではなく、自分の仕事またライフスタイルを変えることもできます。AP-215問題集のメリットはなんですか？ いろいろありますよ。例えば、覚えやすい、便利、時間を節約するということなどです。

>> AP-215試験感想 <<

便利なAP-215試験感想と信頼できるAP-215日本語版

当社PassTestのAP-215試験資料は、約98%~100%の高い合格率と、高い合格率の両方を高めて、テストに合格するのがほとんど困難ではないことを示しています。AP-215試験シミュレーションは、認定された専門家の勤勉な労働者からのリソースと実際の試験に基づいて編集され、過去数年の試験用紙を授与するため、非常に実用的です。AP-215試験問題の質問と回答の内容は洗練されており、最も重要な情報に焦点を当てています。クライアントが実際のAP-215試験の雰囲気とペースに慣れるために、試験を刺激する機能を提供します。

Salesforce Marketing Cloud Intelligence Accredited Professional 認定 AP-215 試験問題 (Q46-Q51):

質問 # 46

In a workspace that contains one hundred data streams and a lot of data, what is the biggest downside of using calculated dimensions?

- A. Performance
- B. Ease of setup
- C. Scalability
- D. Ease of maintenance

正解: A

解説:

In a workspace with a high number of data streams, such as one hundred, the biggest downside of using calculated dimensions is the performance impact. Calculated dimensions require computational resources to dynamically compute values based on existing data. This can lead to increased load times and slower performance, especially in environments with large amounts of data or complex calculations. This performance degradation is due to the extra processing power needed every time the data is accessed or refreshed, impacting the overall efficiency of data retrieval and analysis operations.

質問 # 47

Your client would like to create a new harmonization field - Exam Topic.

The below table represents the harmonization logic from each source.

	Source A (Ads)	Source B (Messaging)	Source C (Ads)
Exam ID	2nd position of Media Buy Key	1st position of Message Send Name	3rd position of Campaign Name
Exam Topic	3rd position of Media Buy Type	---	6th position of Campaign Category
Unique Measurement	Cost	Email Sends	Video Views

As can be seen from the table, there are in fact two fields that hold a certain connection: Exam ID and Exam Topic. The connection indicates that where an Exam ID is found - a single Exam Topic value is associated with it.

The client has a requirement to be able to view measurements from all data sources sliced by Exam Topic values, as seen in the following example:

Exam Topic	Cost	Email Sent	Video Views
Math	10	100	90
Literature	50	900	123

The client suggested to create, without any mapping manipulations, several patterns via the harmonization center that will generate two Harmonized Dimensions:

Exam ID

Exam Topic

Given the above information, which statement is correct regarding the ability to implement this request with the above suggestion?

- A. The solution will work - the client will be able to view Exam Topic with Email Sends.
- B. Only if 5 different Patterns are created, from 5 different fields - the solution will work.
- C. The above Patterns setup will not work for this use case.
- D. The Harmonized field for Exam ID is redundant. One Harmonized dimension for Exam Topic is enough for a sustainable and working solution

正解: D

解説:

If the harmonization logic consistently associates a single Exam Topic with each Exam ID across all data sources, then creating two harmonized dimensions may be unnecessary. One harmonized dimension for Exam Topic would suffice because it inherently carries the Exam ID's uniqueness within it. The harmonized dimension for Exam Topic would allow the client to slice the data by Exam Topic values, fulfilling the requirement.

質問 # 48

A client wants to integrate their data within Marketing Cloud Intelligence to optimize their marketing insights and cross-channel marketing activity analysis. Below are details regarding the different data sources and the number of data streams required for each source.

Data Source Name	Number of Data Streams	Harmonization Field	Harmonization Logic
Facebook Ads	75	Objective	Code found in the 2nd position of Media Buy Name and following logic is applied: If code = "awa" → "Awareness" If code = "trg" → "Retargeting" If code = "crv" → "Conversion" Else → Return the extract
Google Ads	15	Objective	Extract from 2nd position in Campaign Name
Google CM	1	Objective	Extract from 1st position in Media Buy Name
LinkedIn Ads	10	Objective	Return "N/A"

What three advantages are gained when using Patterns & Data Classification as the harmonization method for creating the Objective field?

- A. Processing (processing time when loading relevant data streams)
- B. Performance (Performance when loading a dashboard page)
- C. Ease of Maintenance
- D. Use of code
- E. Scalability

正解: B、C、E

解説:

Patterns & Data Classification in Marketing Cloud Intelligence offer several advantages. These include:

Ease of Maintenance (A): Patterns allow for the standardization of data harmonization processes. Once set up, they can be easily maintained and adjusted as needed, without having to manipulate each data stream individually.

Performance (B): By using patterns, data is classified and standardized at ingestion, which can improve the performance of dashboard page loading because the system does not need to perform complex, on-the-fly calculations or transformations.

Scalability (D): Patterns can be applied across multiple data streams consistently, allowing them to scale with the data. This means that as the amount of data grows or as new data sources are added, the same patterns can be reused, ensuring that the data remains harmonized.

質問 # 49

A client has integrated the following files:

File A:

date	employee_id	employee_name	tasks_completed
01/08/2019	emp_1	Jon Stons	3
01/08/2019	emp_2		2
01/08/2019	emp_3	Jon Bones	4

File B:

date	employee_id	employee_name	squad	tasks_assigned
15/08/2019	emp_1	Jon Stons	Sales	10
15/08/2019	emp_2	Jon Jones	R&D	15
15/08/2019	emp_3	Jon Jones	Support	13

The client would like to link the two files in order to view the two KPIs ('Tasks Completed' and 'Tasks Assigned') alongside 'Employee Name' and/or 'Squad'.

The client set the following properties:

+ File A is set as the Parent data stream

* Both files were uploaded to a generic data stream type.

* Override Media Buy Hierarchies is checked for file A.

* The 'Data Updates Permissions' set for file B is 'Update Attributes and Hierarchy'.

When filtering on the entire date range (1-30/8), and querying employee ID, Name and Squad with the two measurements - what will the result look like?

- A.

employee_id	employee_name	squad	tasks_completed	tasks_assigned
emp_1	Jon Stons		3	-
emp_2			2	-
emp_3	Jon Bones		4	-
- B.

employee_id	employee_name	squad	tasks_completed	tasks_assigned
emp_1	Jon Stons	Sales	3	10
emp_2	Jon Jones	R&D	2	15
emp_3	Jon Bones	Support	4	13
- C.

employee_id	employee_name	squad	tasks_completed	tasks_assigned
emp_1	Jon Stons		3	10
emp_2	Jon Jones		2	15
emp_3	Jon Bones		4	13
- D.

employee_id	employee_name	squad	tasks_completed	tasks_assigned
emp_1	Jon Stons	Sales	3	10
emp_2		R&D	2	15
emp_3	Jon Bones	Support	4	13

正解: D

解説:

In Marketing Cloud Intelligence, when linking two data streams, the parent data stream (File A) provides the main structure. Since 'Override Media Buy Hierarchies' is checked for File A, the hierarchies from File B will be aligned with File A. Given 'Data Updates Permissions' set for file B as 'Update Attributes and Hierarchy', this means that attributes and hierarchy will be updated in the parent file based on the child file (File B), but the child file's metrics won't be associated with the parent file's date.

Hence, when filtering on the entire date range (1-30/8), the resulting view will align with the structure of the parent data stream, showing the KPIs ('Tasks Completed' from File A and 'Tasks Assigned' from File B) alongside the employee names and squads from the respective files. Since the employee IDs align, the data can be linked properly. However, since the dates do not align (File A data is from 01/08/2019 and File B from 15/08/2019), only attributes from File B will be updated without date association.

The result will look like Option C, where the employee names are corrected based on File B's data, the squads are added from File B, and the tasks_completed and tasks_assigned are displayed from their respective files. The tasks_assigned from File B are shown without date association as File B's date doesn't match with File A's.

What Is a disadvantage of using a Vlookup formula?

- A. Can return values only from the same data stream type
- B. It cannot be used more than once from the same data stream.
- C. It allows classifying data only on a basis of mutual entity keys.
- **D. Could extend processing time of data streams.**

正解: D

解説:

The use of VLOOKUP formulas can increase the processing time of data streams because it requires a lookup operation for each row in the data set. When large volumes of data are involved, or when multiple VLOOKUPS are used, this can significantly impact processing time due to the complexity and computational requirements of matching and retrieving the data.
