Exam CCFA-200b Simulator Online - Related CCFA-200b Certifications

For the convenience of the Exams candidates, the difficult portions of the syllabus have been explained with the help of experts to be simplified. One remarkable feature of CCFA-200b actual dumps questions and answers is their similarity with the real exam scenario. They not only give you understanding of the CCFA-200b Exams but also impart you an opportunity to master it. To enhance further your exam ability and strengthen your learning, you can benefit yourself getting practice CrowdStrike real dumps.

CrowdStrike Falcon Administrator Sample Questions (Q185-Q190):

NEW QUESTION # 185

Which is a filter within the Host setup and management > Host management page?

- A. BIOS Version
- **B. OU**
- C. Locality
- D. User name

Answer: B

Explanation:

OU (organizational unit) is a filter within the Host setup and management > Host management page. The Host management page allows you to view and manage all the hosts in your environment that have Falcon sensors installed. You can filter the hosts by hostname, group, OS version, sensor version, last seen date, health events, detections, and preventions. You can also filter by OU, which is a logical grouping of hosts based on their Active Directory domain structure.

NEW QUESTION # 186

As a Falcon Administrator, you would like to tune your Prevention Policies and compare the number of detections that would have resulted in the last 30 days depending on which detection level was used (Cautious, Moderate, Aggressive or Extra Aggressive). Which audit logs would best help you evaluate the appropriate setting to use?

- A. Policy efficacy monitoring
- B. Prevention policy
- **C. Machine-learning prevention monitoring**
- D. Prevention policy debug

Answer: C

NEW QUESTION # 187

An analyst has reported they are not receiving workflow triggered notifications in the past few days. Where should you first check for potential failures?

- A. Falcon UI Audit Trail
- B. Workflow Audit log
- **C. Workflow Execution log**
- D. Custom Alert History

Answer: C

Explanation:

The Workflow Execution log in the Workflow Management option allows you to view the status and results of workflow executions triggered by detection events. You can filter the log by workflow name, status, start and end time, and detection ID. You can also view the details of each execution, including the actions performed, the output received, and any errors encountered. This log can help you troubleshoot potential failures or issues with your workflows.

NEW QUESTION # 188

You have a Windows host on your network in Reduced functionality mode (RFM). While the system is in RFM, which of the following is TRUE?

- A. Event reporting will be unavailable
- **B. Some detection patterns and preventions will not be triggered**
- C. System monitoring will be unavailable
- D. Prevention patterns will not be triggered

Answer: B

Explanation:

The option that is true when a Windows host is in Reduced Functionality Mode (RFM) is that some detection patterns and preventions will not be triggered. RFM is a mode that limits the sensor's functionality due to license expiration, network connectivity loss, or certificate validation failure. When a Windows sensor is in RFM, it will only provide basic prevention capabilities, such as blocking known malware hashes and preventing script execution from the %TEMP% directory.

The sensor will not send any telemetry or detection events to the Falcon platform, and will not receive any policy or update changes from the Falcon cloud. This means that some detection patterns and preventions that rely on telemetry, machine learning, or cloud analysis will not be triggered.

NEW QUESTION # 189

Under which scenario can Sensor Tags be assigned?

- **A. While installing a sensor**
- B. While triaging a detection
- C. While managing hosts in the Falcon console
- D. While updating a sensor in the Falcon console

Answer: A

Explanation:

Check in documentation, there are two kind of tags, the Falcon Grouping Tags that can be managed in falcon console or API and the Sensor Grouping Tags that are configured as parameter in cli, that kind of tags can be differentiated because it appears with the prefix SensorGroupingTags followed with the name of the tag. If you want to modify a sensor tag is necessary change a registry key value and reboot the device or waiting until the sensor is upgraded.

NEW QUESTION # 190

.....

With infallible content for your reference, our CCFA-200b study guide contains the newest and the most important exam questions to practice. And our technicals are always trying to update our CCFA-200b learning quiz to the latest. Only by regular practice can you ingest more useful information than others.
