EMC Dell PowerStore Deploy 2023 Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51

An administrator is setting up a new ESXi cluster using NVMe over TCP. The administrator is given the following parameters:

Volume Details

Name: nvme-ds-01

Category: Virtualization

Application: Containers/Kubernetes

Volume Performance Policy: High

Size: 2 TB

Host Details

Name: ESXi-01

Initiator Type: NVMe

Host Mappings: NVMe

Use the simulator to add the host and the volume and give the host access to the volume using the above parameters.

When you have finished, continue to the next question.

Answer:

Explanation:

See the steps in Explanation.

Explanation:

1. On the simulator, click on the **Storage** tab on the left sidebar. Then click on the **Volumes** subtab. You will see a list of existing volumes on the cluster.
2. To create a new volume, click on the **Create** button on the top right corner. A dialog box will appear where you can enter the volume details.
3. Enter the name of the volume as **nvme-ds-01**. Select the category as **Virtualization** and the application as **Containers/Kubernetes**. These are optional fields that help you organize and identify your volumes.
4. Select the volume performance policy as **High**. This will optimize the volume for high performance and low latency. You can also customize the policy by clicking on the **Advanced** button and adjusting the settings.
5. Enter the size of the volume as **2 TB**. You can also enable thin provisioning, compression, and deduplication if you want to save space and improve efficiency. Click on the **Create** button to create the volume.
6. You will see a confirmation message that the volume has been created successfully. Click on the **Close** button to exit the dialog box. You will see the new volume in the list of volumes.
7. To add a new host, click on the **Hosts** subtab on the left sidebar. You will see a list of existing hosts on the cluster.
8. To create a new host, click on the **Create** button on the top right corner. A dialog box will appear where you can enter the host details.
9. Enter the name of the host as **ESXi-01**. Select the initiator type as **NVMe**. This will enable the host to use the NVMe over TCP protocol to access the volumes.
10. To add the host mappings, click on the **Add Mapping** button. A dialog box will appear where you can select the volume and the access type.
11. Select the volume **nvme-ds-01** from the drop-down menu. Select the access type as **NVMe**. This will map the volume to the host using the NVMe over TCP protocol. Click on the **Add** button to add the mapping.
12. You will see the mapping in the list of host mappings. You can add more mappings if you want to map more volumes to the host. Click on the **Create** button to create the host.
13. You will see a confirmation message that the host has been created successfully. Click on the **Close** button to exit the dialog box. You will see the new host in the list of hosts.
14. You have completed the task of adding the host and the volume and giving the host access to the volume using the NVMe over TCP protocol. You can verify the configuration by clicking on the host or the volume and checking the details.

NEW QUESTION # 52

A Storage administrator configured a read-only NFS export for a specific set of UNIX hosts and added the IP addresses to the host access list. There have been reports that unauthorized hosts are able to access the export. What is the required setting to correct this problem?

- A. Minimum Security: sys
- B. Default access: read only
- C. Minimum security: Kerberos
- **D. Default access: no access**

Answer: D

NEW QUESTION # 53

Which storage type is typically used for storing user files, documents, and media in PowerStore?

- A. Cloud storage
- **B. File storage**
- C. Block storage
- D. Object storage

Answer: B

NEW QUESTION # 54

The wan connection between the production and DR sites has a low latency of <5 milliseconds. Which firewall port is used by PowerStore to communicate between sites?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

NEW QUESTION # 55

A PowerStore user has a business need for file system snapshots of NAS Server NAS1 with the following attributes:

Taken M-F every 2 hoursOT

Retention of 2 daysOT

The snapshots must be accessible through the Previous Versions menu in Windows Using the PowerStore Simulator, make the appropriate configuration change.

When you have finished, continue to the next question.

Answer:

Explanation:

see the Explanation for the solution.

Explanation:

1. Launch the PowerStore Simulator and log in with the admin credentials.
2. On the left navigation pane, click Protection and then click Protection Policies.
3. Click Create Policy and enter a name and description for the policy, such as NAS1 Snapshot Policy.
4. Under Snapshot Rules, click Add Rule and configure the following settings:
5. Name: Enter a name for the rule, such as NAS1 Snapshot Rule.
6. Schedule: Select Custom and enter the following cron expression: 0 */2 * * 1-5. This expression means that the snapshots will be taken every 2 hours on Monday to Friday
7. Retention: Select Until and enter 2 days. This means that the snapshots will be deleted after 2 days.
8. Access Type: Select Snapshot. This means that the snapshots will be accessible through the Previous Versions menu in Windows
9. Click Save to create the snapshot rule and then click Next.
10. Under Replication Rules, click Skip. This means that no replication rule will be added to the policy.
11. Click Next and then click Finish to create the protection policy.

12. On the left navigation pane, click Storage and then click File Systems.
13. Select the file system that belongs to NAS Server NAS1 and click More Actions.
14. Click Edit and then click Protection Policy.
15. Select the protection policy that was created in the previous steps, such as NAS1 Snapshot Policy, and click Save.
16. Click Confirm to apply the protection policy to the file system.
