## 100% Pass 2026 Amazon AWS-Solutions-Associate: AWS Certified Solutions Architect - Associate (SAA-C03) First-grade Valid Exam Cost

The Amazon wants to win the trust of Amazon AWS-Solutions-Associate exam candidates at any cost. To do this the Amazon is offering some important features with Amazon AWS-Solutions-Associate exam. These AWS-Solutions-Associate Exam Questions features are valid, updated, and real Amazon AWS-Solutions-Associate exam questions, availability of Amazon AWS-Solutions-Associate exam questions in three different formats.

### Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q48-Q53):

#### NEW QUESTION # 48

A Solutions Architect is designing a disaster recovery (DR) environment in a separate AWS region from an application's primary workload. The application uses a multi-tier architecture, and only the RDS instance will have frequent changes. The application installation process takes 60 minutes on average. The disaster recovery plan must have an RPO of less than 90 minutes and an RTO of less than 30 minutes.

Which of the following would enable the Solutions Architect to meet these requirements? (Select TWO.)

- A. Amazon S3 cross-region replication of application-tier installers
- B. Amazon Cloud Watch Events in the primary region that trigger the failover to the DR region
- C. Inter-region VPC peering between the primary workload VPC and the DR VPC
- D. A cross-region Amazon EC2 Amazon Machine Image (AMI) copy
- E. An Aurora instance as the primary database with a read replica in the DR region

Answer: D,E

#### NEW QUESTION # 49

What does elasticity mean to AWS?

- A. The ability to scale computing resources up and down easily, with minimal friction.
- B. The ability to provision cloud computing resources in expectation of future demand.
- C. The ability to scale computing resources up easily, with minimal friction and down with latency.
- D. The ability to recover from business continuity events with minimal friction.

**Answer: A**

#### NEW QUESTION # 50

A company's marketing data is uploaded from multiple sources to an Amazon S3 bucket. A series of data preparation jobs aggregate the data for reporting. The data preparation jobs need to run at regular intervals in parallel. A few jobs need to run in a specific order later. The company wants to remove the operational overhead of job error handling, retry logic, and state management. Which solution will meet these requirements?

- A. Use Amazon Athena to process the data. Use Amazon EventBridge Scheduler to invoke Athena on a regular interval.
- B. Use an AWS Lambda function to process the data as soon as the data is uploaded to the S3 bucket. Invoke other Lambda functions at regularly scheduled intervals.
- C. Use AWS Glue DataBrew to process the data. Use an AWS Step Functions state machine to run the DataBrew data preparation jobs.
- D. Use AWS Data Pipeline to process the data. Schedule Data Pipeline to process the data once at midnight.

**Answer: C**

Explanation:

AWS Glue DataBrew is a visual data preparation tool that allows you to easily clean, normalize, and transform your data without writing any code. You can create and run data preparation jobs on your data stored in Amazon S3, Amazon Redshift, or other data sources. AWS Step Functions is a service that lets you coordinate multiple AWS services into serverless workflows. You can use Step Functions to orchestrate your DataBrew jobs, define the order and parallelism of execution, handle errors and retries, and monitor the state of your workflow. By using AWS Glue DataBrew and AWS Step Functions, you can meet the requirements of the company with minimal operational overhead, as you do not need to write any code, manage any servers, or deal with complex dependencies.

#### NEW QUESTION # 51

A solutions architect is creating a new Amazon CloudFront distribution for an application. Some of the information submitted by users is sensitive. The application uses HTTPS but needs another layer of security.

The sensitive information should be protected throughout the entire application stack, and access to the information should be restricted to certain applications.

Which action should the solutions architect take?

- A. Configure a CloudFront field-level encryption profile.
- B. Configure a CloudFront signed cookie.
- C. Configure a CloudFront signed URL.
- D. Configure CloudFront and set the Origin Protocol Policy setting to HTTPS Only for the Viewer Protocol Policy.

**Answer: A**

Explanation:

Explanation:

<https://docs.aws.amazon.com/AmazonCloudFront/latest/DeveloperGuide/field-level-encryption.html>

"With Amazon CloudFront, you can enforce secure end-to-end connections to origin servers by using HTTPS. Field-level encryption adds an additional layer of security that lets you protect specific data throughout system processing so that only certain applications can see it."

### NEW QUESTION # 52

A user is planning to host a mobile game on EC2 which sends notifications to active users on either high score or the addition of new features. The user should get this notification when he is online on his mobile device. Which of the below mentioned AWS services can help achieve this functionality?

- A. AWS Simple Notification Service.
- B. AWS Simple Email Service.
- C. AWS Simple Queue Service.
- D. AWS Mobile Communication Service.

**Answer: A**

Explanation:

Amazon Simple Notification Service (Amazon SNS) is a fast, flexible, and fully managed push messaging service. Amazon SNS makes it simple and cost-effective to push to mobile devices, such as iPhone, iPad, Android, Kindle Fire, and internet connected smart devices, as well as pushing to other distributed services.
