AD0-E725 Training Kit | AD0-E725 Interactive Questions

You can access the premium PDF file of Adobe Commerce Developer Expert AD0-E725 dumps right after making the payment. It will contain all the latest AD0-E725 exam dumps questions based on the official AD0-E725 exam study guide. These are the most relevant Adobe AD0-E725 questions that will appear in the actual Adobe Commerce Developer Expert exam. Thus you won't waste your time preparing with outdated AD0-E725 Dumps. You can go through Adobe AD0-E725 dumps questions using this PDF file anytime, anywhere even on your smartphone.

Adobe Commerce Developer Expert Sample Questions (Q22-Q27):

NEW QUESTION # 22

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Restrict which resources (scripts, styles, images) are allowed to load on the website.
- B. Ensure that all user input is sanitized before being processed by the application.
- C. Prevent users from accessing certain areas of the website based on their IP address.

Answer: A

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Adobe Commerce supports Content Security Policy (CSP), a browser-level security feature that mitigates certain types of attacks such as Cross-Site Scripting (XSS) and data injection attacks.

By defining a CSP in Adobe Commerce, developers can control:

- * Which scripts can be executed (script-src).
- * Which stylesheets can be applied (style-src).
- * Which images and media can be loaded (img-src, media-src).
- * Whether inline scripts or styles are allowed.

This does not sanitize user input (A) nor restrict user access based on IP addresses (B). Instead, it focuses on restricting the sources of content that the browser can load.

Official Documentation Extracts:

* "Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. CSP works by restricting the sources from which content can be loaded."- Adobe Commerce DevDocs: Content Security Policy

* "A CSP allows developers to define approved sources of content that browsers can load. These policies help reduce the risk of malicious content injection in Magento storefronts."- Adobe Commerce Security Guide

NEW QUESTION # 23

A third-party company wants to integrate into Adobe Commerce by using webhooks; they would like to emulate the webhook endpoint. As part of this process, they will send payload data to a Developer for testing.

What format should the payload be as part of the webhook test command?

- A. JSON
- B. XML
- C. Plain text

Answer: A

NEW QUESTION # 24

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Restrict which resources (scripts, styles, images) are allowed to load on the website.
- B. Ensure that all user input is sanitized before being processed by the application.
- C. Prevent users from accessing certain areas of the website based on their IP address.

Answer: A

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Adobe Commerce supports Content Security Policy (CSP), a browser-level security feature that mitigates certain types of attacks such as Cross-Site Scripting (XSS) and data injection attacks.

By defining a CSP in Adobe Commerce, developers can control:

- * Which scripts can be executed (script-src).
- * Which stylesheets can be applied (style-src).
- * Which images and media can be loaded (img-src, media-src).
- * Whether inline scripts or styles are allowed.

This does not sanitize user input (A) nor restrict user access based on IP addresses (B). Instead, it focuses on restricting the sources of content that the browser can load.

Official Documentation Extracts:

* "Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. CSP works by restricting the sources from which content can be loaded."- Adobe Commerce DevDocs: Content Security Policy

* "A CSP allows developers to define approved sources of content that browsers can load. These policies help reduce the risk of malicious content injection in Magento storefronts."- Adobe Commerce Security Guide

NEW QUESTION # 25

An Adobe Commerce Developer is tasked with configuring a custom module to allow for different behaviors of a core class without altering the original class code.

How should the Developer achieve this flexibility by leveraging Magento's dependency injection system?

- A. Use constructor arguments in the di.xml file.
- B. Use a transient object in the di.xml file.
- **C. Use virtual types in the di.xml file.**

Answer: C

NEW QUESTION # 26

A client is setting up an Adobe Commerce B2B store and wants to start offering a Payment on Account option for their customers when placing orders.

How should the Developer achieve this?

- **A. Install and activate the native Adobe Commerce module which activates payment.**
- B. Create and implement a new Payment Method to provide credit accounts to customers.
- C. Repurpose the native Cash on Delivery method.

Answer: A

Explanation:

Adobe Commerce B2B includes a native "Payment on Account" module, which is part of the B2B suite. This module allows customers with company accounts to place orders on account (credit).

A (repurpose COD) is a hack and not recommended.

C (create new payment method) is unnecessary since Adobe Commerce already includes this B2B feature.

B is correct: simply enable the native B2B Payment on Account module.
