100% Pass Quiz 2026 Accurate Snowflake ARA-C01: Latest SnowPro Advanced Architect Certification Test Preparation

With the help of Snowflake certification, you can excel in the field of and can get a marvelous job in a well-known firm. If you prepare with TrainingDump, then your success is guaranteed. We offer money back guarantee for our customers. The whole

material of the Snowflake ARA-C01 dumps are related to the exam. It provides complete guidance how to prepare the exam. The ARA-C01 Exam Dumps are highly useful and practical. You can be sure of your success in the first attempt. The comprehensive material of dumps and ARA-C01 dumps are perfect for exam assistance.

Snowflake ARA-C01 Exam is intended for experienced architects who have a deep understanding of Snowflake's cloud data platform and its capabilities. ARA-C01 exam tests the candidate's ability to design and implement complex data warehousing solutions, including data modeling, data integration, data transformation, and data analysis.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q52-Q57):

NEW QUESTION # 52

A stream stores data with the same columns as the source data but with additional columns. What are those additional columns?

- A. METADATA\$DELETE
- **B. METADATA\$ISUPDATE**
- **C. METADATA\$ROW_ID**
- **D. METADATA\$ACTION**

Answer: B,C,D

NEW QUESTION # 53

When a cloned table is replicated to a secondary database, the data also gets replicated in the secondary database

- **A. TRUE**
- B. FALSE

Answer: A

NEW QUESTION # 54

An Architect needs to design a data unloading strategy for Snowflake, that will be used with the COPY INTO <location> command.

Which configuration is valid?

- A. Location of files: Snowflake internal location
 - . File formats: CSV, XML
 - . File encoding: UTF-8
 - . Encryption: 128-bit
- B. Location of files: Azure ADLS
 - . File formats: JSON, XML, Avro, Parquet, ORC
 - . Compression: bzip2
 - . Encryption: User-supplied key
- **C. Location of files: Google Cloud Storage**
 - . File formats: Parquet
 - . File encoding: UTF-8
 - * Compression: gzip**
- D. Location of files: Amazon S3
 - . File formats: CSV, JSON
 - . File encoding: Latin-1 (ISO-8859)
 - . Encryption: 128-bit

Answer: C

Explanation:

For the configuration of data unloading in Snowflake, the valid option among the provided choices is "C." This is because Snowflake supports unloading data into Google Cloud Storage using the COPY INTO <location> command with specific configurations. The configurations listed in option C, such as Parquet file format with UTF-8 encoding and gzip compression, are all supported by Snowflake. Notably, Parquet is a columnar storage file format, which is optimal for high-performance data processing tasks in

Snowflake. The UTF-8 file encoding and gzip compression are both standard and widely used settings that are compatible with Snowflake's capabilities for data unloading to cloud storage platforms.

NEW QUESTION # 55

A user has the appropriate privilege to see unmasked data in a column.

If the user loads this column data into another column that does not have a masking policy, what will occur?

- A. Masked data will be loaded into the new column.
- B. Unmasked data will be loaded into the new column and no users will be able to see the unmasked data.
- C. Unmasked data will be loaded in the new column.
- D. Unmasked data will be loaded into the new column but only users with the appropriate privileges will be able to see the unmasked data.

Answer: C

Explanation:

According to the SnowPro Advanced: Architect documents and learning resources, column masking policies are applied at query time based on the privileges of the user who runs the query. Therefore, if a user has the privilege to see unmasked data in a column, they will see the original data when they query that column. If they load this column data into another column that does not have a masking policy, the unmasked data will be loaded in the new column, and any user who can query the new column will see the unmasked data as well.

The masking policy does not affect the underlying data in the column, only the query results.
