

# Reliable Cisco 300-540 Guide Files & Pdf 300-540 Braindumps

www.NWExam.com  
Get complete detail on 300-540 exam guide to crack Designing and Implementing Cisco Service Provider Cloud Network Infrastructure. You can collect all information on 300-540 tutorial, practice test, books, study material, exam questions, and syllabus. Firm your knowledge on Designing and Implementing Cisco Service Provider Cloud Network Infrastructure and get ready to crack 300-540 certification. Explore all information on 300-540 exam with number of questions, passing percentage and time duration to complete test.

The key trait of our product is that we keep pace with the changes the latest circumstance to revise and update our 300-540 study materials, and we are available for one-year free updating to our customers. Our company has established a long-term partnership with those who have purchased our 300-540 exam guides. We have made all efforts to update our product in order to help you deal with any change, making you confidently take part in the exam. We will inform you that the 300-540 Study Materials should be updated and send you the latest version of our 300-540 exam questions in a year after your payment.

## Cisco 300-540 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Cloud Interconnect: This section of the exam measures the skills of Service Provider Network Engineers and covers how large networks interconnect with cloud platforms and carrier-neutral facilities. Candidates are expected to understand various connectivity options to cloud providers, customer sites, and other neutral facilities, as well as evaluate WAN connectivity models such as direct connect, MPLS or segment routing, and IPsec VPN links. The domain also includes the ability to troubleshoot advanced data center interconnect solutions, including EVPN VXLAN, EVPN over SR</li><li>• MPLS, ACI-based connectivity, and pseudowire architectures supporting cloud-to-cloud and cloud-to-edge communication.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Security:</b> This section of the exam measures the skills of Network Security Engineers and covers the implementation of infrastructure-level protection in cloud and NFVI ecosystems. It includes topics such as ACLs, uRPF, RTBH, router hardening, BGP flowspec, TACACS, and MACSEC. Candidates should understand DoS mitigation methods and apply security practices within NFVI, focusing on API protection, securing the control and management plane, and segmentation strategies in service provider cloud environments. The domain also evaluates basic knowledge of TLS, mTLS, and general cloud security solutions related to DNS protection, zero-day defenses, and malware detection.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Service Assurance and Optimization:</b> This section of the exam measures the skills of Cloud Operations Engineers and covers assurance mechanisms used to maintain performance, stability, and visibility across NFVI environments. It includes network assurance concepts such as MANO frameworks, VNF workload monitoring, VIM control plane KPIs, and streaming telemetry with gRPC and gNMI. Candidates must understand cloud infrastructure performance monitoring tools, including SR-PM, NetFlow, IPFIX, syslog, SNMP traps, RMON, cloud agents, and automated fault management systems. The domain also touches on diagnosing NFVI-related errors and optimizing VNFs using techniques such as SR-IOV and software-accelerated virtual switching technologies like DPDK and VPP.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>High Availability:</b> This section of the exam measures the skills of Cloud Infrastructure Architects and covers the design and implementation of redundancy and resiliency mechanisms in virtualized network functions and distributed cloud platforms. It includes data plane redundancy for VNFs, high availability within a single VIM control plane, and resilient compute, vNIC, and top-of-rack switching. The exam requires an understanding of multi-homing, EVLAG configurations, virtual private cloud deployment, and ECMP strategies for NFVI integrations with physical routing protocols such as BGP, OSPF, and IS-IS. Candidates must also recommend suitable high-availability models involving DNS, routing, and load balancing.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Virtualized Architecture:</b> This section of the exam measures the skills of Cloud Network Engineers and covers the foundational concepts of virtualized infrastructures used in modern service provider and cloud environments. Candidates are expected to understand constraints in IaaS designs, determine appropriate cloud service models, and demonstrate awareness of container orchestration compared to traditional virtual machines. The exam also evaluates the ability to implement key virtualization functions such as NFV, VNF, NSO, and virtualized Cisco platforms. Learners must be able to deploy NFV with automation tools, manage VNF onboarding, work with NSO-driven orchestration, and use protocols like NETCONF, RESTCONF, REST APIs, and gNMI within automated cloud ecosystems. A general understanding of supporting platforms such as OpenStack also forms part of the required knowledge in this domain.</li> </ul>

## **Pass-Sure Reliable 300-540 Guide Files offer you accurate Pdf Braindumps | Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure**

Hence, if you want to sharpen your skills, and get the Designing and Implementing Cisco Service Provider Cloud Network Infrastructure (300-540) certification done within the target period, it is important to get the best Designing and Implementing Cisco Service Provider Cloud Network Infrastructure (300-540) exam questions. You must try 300-540 practice exam that will help you get the Cisco 300-540 certification. ValidTorrent hires the top industry experts to draft the Designing and Implementing Cisco Service Provider Cloud Network Infrastructure (300-540) exam dumps and help the candidates to clear their Designing and Implementing Cisco Service Provider Cloud Network Infrastructure (300-540) exam easily. ValidTorrent plays a vital role in their journey to get the 300-540 certification.

## **Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Sample Questions (Q50-Q55):**

**NEW QUESTION # 50**

Refer to the exhibit. The indicated configuration was applied to a Cisco switch Switch\_A located in the Los Angeles DC data center; however, Switch\_A fails to establish OTV connectivity to Cisco switch Switch\_C. Which overlay interface command must be run on Switch\_A to resolve the issue?

- A. otv isis authentication-check
- B. otv isis authentication-type md5
- C. otv join-interface vlan 101-111
- D. otv extend-vlan 101-111

**Answer: D**

Explanation:

Overlay Transport Virtualization (OTV) allows Layer 2 extension across Layer 3 infrastructures. To operate, OTV requires three fundamental components on the overlay interface:

Join interface - used to reach the OTV control plane over L3 (already configured: otv join-interface g1/0).

Control-group multicast address - for control-plane advertisement (already configured: otv control-group 224.1.1.1).

Extended VLAN list - specifies which VLANs will be transported through the OTV overlay.

The configuration shown in the exhibit includes the join-interface, control-group, and data-group, but it does NOT specify which VLANs should be extended. Without the otv extend-vlan command, OTV will form the overlay interface but will not forward any Layer 2 information, preventing adjacency and MAC distribution between sites.

In OTV, the command required to activate VLANs for transport is:

otv extend-vlan <vlan-range>

This enables the VLANs (such as 101-111) to be carried across the OTV overlay, completing the configuration and establishing connectivity.

Why the Other Options Are Incorrect

B). otv isis authentication-type md5

This is optional and only required if ISIS authentication is enabled on both edges. It does not resolve the absence of VLAN extension.

C). otv isis authentication-check

This command enforces authentication verification but does not fix connectivity when VLANs are not extended.

D). otv join-interface vlan 101-111

This is not a valid OTV command. The join-interface must be a routed interface, not a VLAN list.

## NEW QUESTION # 51

To ensure control plane high availability, deploying \_\_\_\_\_ instances across different physical servers is recommended.

- A. duplicated
- B. isolated
- C. single
- D. multiple

**Answer: D**

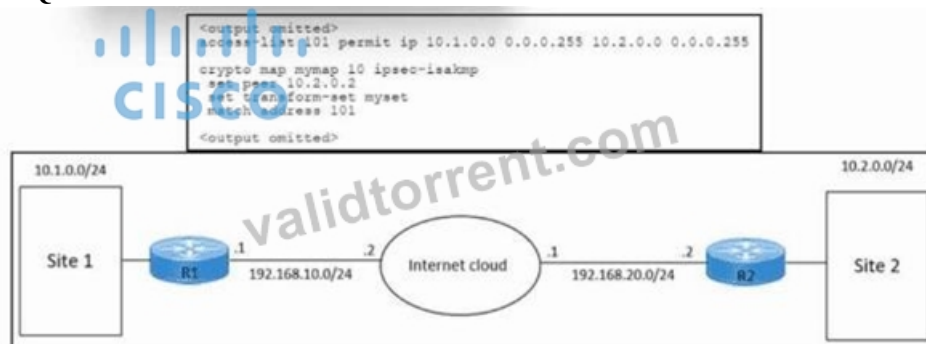

#### NEW QUESTION # 52

The primary benefit of MACSEC is:

- A. Increasing the speed of network devices
- B. Encrypting frames on a network
- C. Authenticating users accessing the network
- D. Filtering traffic based on content

**Answer: B**

#### NEW QUESTION # 53

Refer to the exhibit. An engineer must configure an IPsec VPN connection between site 1 and site 2. The indicated configuration was applied to router R1; however, the tunnel fails to come up. Which command must be run on R1 to resolve the issue?

- A. set peer 192.168.10.1
- B. set peer 10.1.0.1
- C. set peer 192.168.20.2
- D. set peer 10.2.0.1

**Answer: C**

Explanation:

For a site-to-site IPsec VPN, each peer must point to the reachable IP address of the remote VPN endpoint—that is, the IP address on the WAN/Internet-facing interface of the remote router.

From the diagram:

- \* R1 outside (toward Internet): 192.168.10.1
- \* R2 outside (toward Internet): 192.168.20.2
- \* Inside LANs:
- \* Site 1: 10.1.0.0/24
- \* Site 2: 10.2.0.0/24

The crypto map on R1 uses:

```
crypto map mymap 10 ipsec-isakmp
set transform-set myset
match address 101
set peer <REMOTE_PEER_IP>
```

The <REMOTE\_PEER\_IP> must be the IP address where R1 can actually reach the IPsec peer, which is R2's Internet-facing interface 192.168.20.2.

If the peer were configured with a LAN IP such as 10.2.0.1 (site 2's internal gateway), IKE packets would never reach the remote router because that address is not routable over the Internet.

Therefore, the correct command to bring up the VPN is:

```
set peer 192.168.20.2
```

- \* Option A (10.1.0.1)- local LAN IP (R1's side), not the remote endpoint.
- \* Option C (192.168.10.1)- R1's own WAN IP, not the remote peer.
- \* Option D (10.2.0.1)- remote LAN IP, not reachable directly over the Internet.

#### NEW QUESTION # 54

In the context of cloud deployments, hybrid refers to:

- A. The use of both physical and virtual network functions
- B. A combination of Linux and Windows servers
- C. Deployments that mix SaaS and IaaS service models
- **D. A mix of on-premises and off-premises infrastructure**

**Answer: D**

#### NEW QUESTION # 55

.....

With the popularization of wireless network, those who are about to take part in the 300-540 exam guide to use APP on the mobile devices as their learning tool, because as long as entering into an online environment, they can instantly open the learning material from their appliances. Our 300-540 study materials provide such version for you. The online test engine is a kind of online learning, you can enjoy the advantages of APP version of our 300-540 Exam Guide freely. Moreover, you actually only need to download the APP online for the first time and then you can have free access to our 300-540 exam questions in the offline condition if you don't clear cache.
