HPE0-J68 PDF Cram Exam, HPE0-J68 Training Material

You will have prior experience in answering questions with adjustable time. With these features, you will improve your HPE Storage Solutions HPE0-J68 exam confidence and time management skills. Many candidates prefer to prepare for the HPE Storage Solutions HPE0-J68 Exam Dumps using different formats. The HPE Storage Solutions HPE0-J68 exam questions were designed in different formats so that every candidate could select what suited them best.

HPE ASE - Storage Solutions Architect V3 certification is recognized globally as a significant achievement in the IT industry. HPE Storage Solutions certification validates the candidate's ability to design, implement, and manage complex storage solutions using HPE products and technologies. HPE Storage Solutions certification is highly valued by employers and can lead to increased job opportunities and higher salaries.

HPE Storage Solutions Sample Questions (Q48-Q53):

NEW QUESTION # 48

A customer is purchasing an HPE MSA 2050 for a branch office. They will use it for critical data services.

The customer is concerned that 64 snapshots will not be adequate as they grow.

What can be added to the array to address the customer's concerns?

- A. All-inclusive Multi-system license
- B. Virtual Copy license
- **C. Advanced Data Services Suite license**
- D. Adaptive Optimization license

Answer: C

Explanation:

The HPE MSA 2050 comes with a base set of features, including the ability to create up to 64 snapshots.

However, for customers who require more extensive snapshot capabilities as their data services grow, the Advanced Data Services Suite license is the appropriate solution. This license extends the functionality of the MSA, including an increase in the number of snapshots that can be created and managed, thus addressing the customer's concerns about future growth.

* HPE MSA Advanced Data Services

NEW QUESTION # 49

Which SSD controller component is responsible for wear leveling?

- A. DRAM
- **B. NAND memory controller**
- C. SATA interface chip
- D. Processor

Answer: B

Explanation:

The NAND memory controller is the component responsible for wear leveling in SSDs. Wear leveling is a process used to extend the lifespan of NAND flash memory by ensuring that write and erase cycles are distributed evenly across the memory cells. This prevents any single cell from being overused, which could lead to premature failure. The NAND memory controller plays a crucial role in managing this process, ensuring the reliability and longevity of the SSD.

NEW QUESTION # 50

A customer is implementing a new high performance database environment.

What type of storage should you recommend?

- A. system-defined storage
- B. object store
- **C. scale-out storage**
- D. network-attached storage

Answer: C

NEW QUESTION # 51

A second group of 11 same-capacity disks has been added to your customer's HPE Alletra 6000 head shelf.

After 1 hour it seems the new drives have not merged with the existing driveset. Which action should you perform to fix the problem?

- A. The merging process may take up to 24h, wait and then verify the next day.
- B. If you add a second driveset, it will always be configured as a separate RAID set.
- **C. Log in to the Alletra 6000 CLI via SSH, then run the "tunesys" command to trigger the RAID rebalancing process.**
- D. Log in to the Alletra 6000 local UI, then from the Hardware section of the UI next to the head shelf icon click "Admit."

Answer: C

NEW QUESTION # 52

A customer is planning to replace their existing LTO-6 tape library with a new HPE StoreEver MSL2024 tape library. They want to reuse their existing LTO-6 tape cartridges for reads and writes.

What is the latest tape drive technology that will provide backward compatibility?

- A. LTO7
- B. LTO8
- C. LTO6
- D. LTO5

Answer: A

Explanation:

When replacing an existing LTO-6 tape library with a new HPE StoreEver MSL2024 tape library, and the customer wants to reuse their LTO-6 tape cartridges, LTO7 (Option D) is the latest tape drive technology that provides backward compatibility with LTO-6 tapes.

LTO7 drives can read and write to LTO-6 cartridges, making them the optimal choice for ensuring the customer's existing media can be utilized effectively while also providing the benefits of newer tape technology, such as higher capacity and faster data transfer rates.
