At QuestionsTube, you can read SC-100 free demo questions in pdf file, so you can check the questions and answers before deciding to download the Microsoft SC-100 practice questions. These free demo questions are parts of the SC-100 exam questions. Download and read them carefully, you will find that the SC-100 test questions of QuestionsTube will be your great learning materials online. Share some SC-100 exam online questions below.

1. You have a Microsoft 365 E5 subscription.

P.S. Free & New SC-100 dumps are available on Google Drive shared by PrepAwayExam: https://drive.google.com/open?id=1UczDStEWSHvX7SKpYJWjNPqQ1_C1IQFK

If you are going to purchasing the SC-100 exam bootcamp online, you may pay more attention to the pass rate. With the pass rate more than 98%, our SC-100 exam materials have gained popularity in the international market. And we have received many good feedbacks from our customers. In addition, we offer you free demo to have a try before buying SC-100 Exam Braindumps, so that you can have a deeper understanding of what you are going to buy. You can also enjoy free update for one year, and the update version for SC-100 will be sent to your email automatically.

Microsoft SC-100 certification exam is designed to test an individual's knowledge and skills in cybersecurity architecture. Microsoft Cybersecurity Architect certification is designed for those who are interested in pursuing a career in cybersecurity or for those who are already working in the field and want to enhance their skills and knowledge. The Microsoft SC-100 certification exam validates the skills required for designing and implementing secure solutions using Microsoft technologies.

Microsoft SC-100 Exam is designed to test the candidate's knowledge of Microsoft security solutions such as Microsoft 365 Defender, Microsoft Azure Defender, and Microsoft Azure Sentinel. SC-100 exam is also designed to test the candidate's knowledge of security fundamentals, threat management, security management, and identity and access management.

2026 Efficient 100% Free SC-100 – 100% Free Valid Test Pattern | Valid Exam Microsoft Cybersecurity Architect Blueprint

PrepAwayExam never hits its customers with any kind of scam instead they are offered with 100% authentic products for Microsoft SC-100 exam preparation. It is our honor to serve you with ever best offering and delivering the core values for your spent pennies. Failure is unusual with SC-100 training but if any misfortune leads you towards failure, no issues for financial loss. PrepAwayExam will repay you all the charges that you have paid for our SC-100 exam products.

Microsoft SC-100 exam covers a range of topics related to cybersecurity architecture, including security design, implementation, and management. SC-100 exam tests an individual's understanding of cybersecurity principles, as well as their ability to implement and manage security solutions in a variety of settings. SC-100 Exam is designed to be challenging, and individuals who pass the exam can be confident in their ability to design and implement effective cybersecurity solutions.

Microsoft Cybersecurity Architect Sample Questions (Q152-Q157):

NEW QUESTION # 152

To meet the application security requirements, which two authentication methods must the applications support? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Security Assertion Markup Language (SAML)
- B. certificate-based authentication
- C. Kerberos
- D. NTLMv2

Answer: A,C

Explanation:

Explanation

Topic 2, Litware, inc. Case Study 2

Overview

Litware, inc. is a financial services company that has main offices in New York and San Francisco. litware has 30 branch offices and remote employees across the United States. The remote employees connect to the main offices by using a VPN.

Litware has grown significantly during the last two years due to mergers and acquisitions. The acquisitions include several companies based in France.

Existing Environment

Litware has an Azure Active Directory (Azure AD) tenant that syncs with an Active Directory Domain Services (AD DS) forest named Utvware.com and is linked to 20 Azure subscriptions. Azure AD Connect is used to implement pass-through authentication. Password hash synchronization is disabled, and password writeback is enabled. All Litware users have Microsoft 365 E5 licenses. The environment also includes several AD DS forests, Azure AD tenants, and hundreds of Azure subscriptions that belong to the subsidiaries of Litware.

Planned Changes

Litware plans to implement the following changes:

- * Create a management group hierarchy for each Azure AD tenant.
- * Design a landing zone strategy to refactor the existing Azure environment of Litware and deploy all future Azure workloads.
- * Implement Azure AD Application Proxy to provide secure access to internal applications that are currently accessed by using the VPN.

Business Requirements

Litware identifies the following business requirements:

- * Minimize any additional on-premises infrastructure.
- * Minimize the operational costs associated with administrative overhead.

Hybrid Requirements

Litware identifies the following hybrid cloud requirements:

- * Enable the management of on-premises resources from Azure, including the following:
- * Use Azure Policy for enforcement and compliance evaluation.
- * Provide change tracking and asset inventory.
- * Implement patch management.

* Provide centralized, cross-tenant subscription management without the overhead of maintaining guest accounts.

Microsoft Sentinel Requirements

Litware plans to leverage the security information and event management (SIEM) and security orchestration automated response (SOAR) capabilities of Microsoft Sentinel. The company wants to centralize Security Operations Center (SOC) by using Microsoft Sentinel.

Identity Requirements

Litware identifies the following identity requirements:

- * Detect brute force attacks that directly target AD DS user accounts.
- * Implement leaked credential detection in the Azure AD tenant of Litware.
- * Prevent AD DS user accounts from being locked out by brute force attacks that target Azure AD user accounts.
- * Implement delegated management of users and groups in the Azure AD tenant of Litware, including support for:
 - * The management of group properties, membership, and licensing
 - * The management of user properties, passwords, and licensing
 - * The delegation of user management based on business units.

Regulatory Compliance Requirements

Litware identifies the following regulatory compliance requirements:

- * Insure data residency compliance when collecting logs, telemetry, and data owned by each United States- and France-based subsidiary.
- * Leverage built-in Azure Policy definitions to evaluate regulatory compliance across the entire managed environment.
- * Use the principle of least privilege.

Azure Landing Zone Requirements

Litware identifies the following landing zone requirements:

- * Route all internet-bound traffic from landing zones through Azure Firewall in a dedicated Azure subscription.
- * Provide a secure score scoped to the landing zone.
- * Ensure that the Azure virtual machines in each landing zone communicate with Azure App Service web apps in the same zone over the Microsoft backbone network, rather than over public endpoints.
- * Minimize the possibility of data exfiltration.
- * Maximize network bandwidth.

The landing zone architecture will include the dedicated subscription, which will serve as the hub for internet and hybrid connectivity.

Each landing zone will have the following characteristics:

- * Be created in a dedicated subscription.
- * Use a DNS namespace of litware.com.

Application Security Requirements

Litware identifies the following application security requirements:

- * Identify internal applications that will support single sign-on (SSO) by using Azure AD Application Proxy.
- * Monitor and control access to Microsoft SharePoint Online and Exchange Online data in real time.

NEW QUESTION # 153

You have an Azure subscription that has Microsoft Defender for Cloud enabled. Suspicious authentication activity alerts have been appearing in the Workload protections dashboard.

You need to recommend a solution to evaluate and remediate the alerts by using workflow automation. The solution must minimize development effort. What should you include in the recommendation?

- A. Azure Event Hubs
- B. Azure Monitor webhooks
- **C. Azure Logics Apps**
- D. Azure Functions apps

Answer: C

Explanation:

The workflow automation feature of Microsoft Defender for Cloud feature can trigger Logic Apps on security alerts, recommendations, and changes to regulatory compliance. Note: Azure Logic Apps is a cloud-based platform for creating and running automated workflows that integrate your apps, data, services, and systems.

With this platform, you can quickly develop highly scalable integration solutions for your enterprise and business-to-business (B2B) scenarios.

NEW QUESTION # 154

Hotspot Question

Your company has a Microsoft 365 E5 subscription, an Azure subscription, on-premises applications, and Active Directory Domain Services (ADDS).

You need to recommend an identity security strategy that meets the following requirements:

- Ensures that customers can use their Facebook credentials to authenticate to an Azure App Service website
 - Ensures that partner companies can access Microsoft SharePoint Online sites for the project to which they are assigned
- The solution must minimize the need to deploy additional infrastructure components.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

For the customers:

Azure AD B2B authentication with access package assignments
Azure AD B2C authentication
Federation in Azure AD Connect with Active Directory Federation Services
Pass-through authentication in Azure AD Connect
Password hash synchronization in Azure AD Connect

For the partners:

Azure AD B2B authentication with access package assignments
Azure AD B2C authentication
Federation in Azure AD Connect with Active Directory Federation Services
Pass-through authentication in Azure AD Connect
Password hash synchronization in Azure AD Connect

Answer:

Explanation:

Answer Area

For the customers:

Azure AD B2B authentication with access package assignments
Azure AD B2C authentication
Federation in Azure AD Connect with Active Directory Federation Services
Pass-through authentication in Azure AD Connect
Password hash synchronization in Azure AD Connect

For the partners:

Azure AD B2B authentication with access package assignments
Azure AD B2C authentication
Federation in Azure AD Connect with Active Directory Federation Services
Pass-through authentication in Azure AD Connect
Password hash synchronization in Azure AD Connect

Explanation:

Box 1: Azure AD B2C authentication

Ensures that customers can use their Facebook credentials to authenticate to an Azure App Service website.

You can set up sign-up and sign-in with a Facebook account using Azure Active Directory B2C.

Box 2: Azure AD B2B authentication with access package assignments

Govern access for external users in Azure AD entitlement management. Azure AD entitlement management uses Azure AD business-to-business (B2B) to share access so you can collaborate with people outside your organization.

With Azure AD B2B, external users authenticate to their home directory, but have a representation in your directory. The representation in your directory enables the user to be assigned access to your resources.

NEW QUESTION # 155

A customer is deploying Docker images to 10 Azure Kubernetes Service (AKS) resources across four Azure subscriptions. You are evaluating the security posture of the customer.

You discover that the AKS resources are excluded from the secure score recommendations.

You need to produce accurate recommendations and update the secure score.

Which two actions should you recommend in Microsoft Defender for Cloud? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Assign regulatory compliance policies.
- **B. Enable Defender plans.**
- C. Review the inventory.
- D. Add a workflow automation.
- **E. Configure auto provisioning.**

Answer: B,E

Explanation:

Enable the defender for containers plan - then ensure it deploys to your container resources with auto provision.

NEW QUESTION # 156

Your company develops several applications that are accessed as custom enterprise applications in Azure Active Directory (Azure AD). You need to recommend a solution to prevent users on a specific list of countries from connecting to the applications. What should you include in the recommendation?

- A. activity policies in Microsoft Defender for Cloud Apps
- B. user risk policies in Azure AD Identity Protection
- C. sign-in risk policies in Azure AD Identity Protection
- **D. Azure AD Conditional Access policies**
- E. device compliance policies in Microsoft Endpoint Manager

Answer: D

Explanation:

Explanation

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/howto-conditional-access-policy-loc>

<https://docs.microsoft.com/en-us/power-platform/admin/restrict-access-online-trusted-ip-rules>
