

Fortinet NSE6_FNC_AD-7.6퍼펙트최신버전공부자료 - NSE6_FNC_AD-7.6퍼펙트덤프공부

Fortinet NSE5_FNC_AD_7.6 PDF Guide | Practice Test & Real Questions

Get Instant Access to NSE5_FNC_AD_7.6 Study Guide PDF and Start
Preparing Smarter

www.NWExam.com
Prepare for the Fortinet NSE5_FNC_AD_7.6 FortiNAC Administrator certification with a focused study guide covering key exam topics, real exam-style questions, and practical insights. Learn device profiling, network access policies, security rules, and troubleshooting techniques. Strengthen your concepts, improve accuracy, and boost your chances of passing the exam on your first attempt.

Fast2test의Fortinet NSE6_FNC_AD-7.6 덤프 구매 후 등록된 사용자가 구매일로부터 일년 이내에Fortinet NSE6_FNC_AD-7.6시험에 실패하셨다면 Fast2test메일에 주문번호와 불합격성적표를 보내오셔서 환불신청하실수 있습니다.구매일자 이전에 발생한 시험불합격은 환불보상의 대상이 아닙니다. 개별 인증사는 불합격성적표를 발급하지 않기에 재시험신청내역을 환불증명으로 제출하시면 됩니다.

Fortinet NSE6_FNC_AD-7.6 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Integration	25%	- FortiNAC-F Manager configuration - Integration with FortiGate/FortiOS - Syslog and SNMP trap integration - MDM and third-party device integration
Topic 2: Deployment and Provisioning	30%	- High Availability (HA) setup and monitoring - Security policies and enforcement - Access control and logical networks - Security automation configuration
Topic 3: Network Visibility and Monitoring	20%	- Guest and contractor management - Troubleshooting network and device status - Logging and reporting - Device profiling and classification
Topic 4: Concepts and Initial Configuration	25%	- FortiNAC-F architecture and concepts - Model and organize infrastructure devices - Isolation networks and configuration wizard

NSE6_FNC_AD-7.6퍼펙트 덤프공부, NSE6_FNC_AD-7.6덤프데모문제

Fast2test선택으로Fortinet NSE6_FNC_AD-7.6시험을 패스하도록 도와드리겠습니다. 우선 우리Fast2test 사이트에서 Fortinet NSE6_FNC_AD-7.6관련자료의 일부 문제와 답 등 샘플을 제공함으로 여러분은 무료로 다운받아 체험해보실 수 있습니다. 체험 후 우리의Fast2test에 신뢰감을 느끼게 됩니다. Fast2test에서 제공하는Fortinet NSE6_FNC_AD-7.6덤프로 시험 준비하세요. 만약 시험에서 떨어진다면 덤프전액환불을 약속 드립니다.

최신 NSE 6 Network Security Specialist NSE6_FNC_AD-7.6 무료샘플문제 (Q40-Q45):

질문 # 40

During the testing of a newly modeled infrastructure switch, the administrator is not seeing hosts as they connect or move from one port to another. What would cause this issue?

- A. Contact polling is not configured.
- B. Layer 3 polling is failing.
- C. The default scheduled polling is disabled.
- D. MAC notification traps are misconfigured.

정답: D

설명:

The correct answer is A . When FortiNAC-F needs near real-time Layer 2 visibility, it relies on link traps, MAC notification traps, RADIUS, or scheduled/manual Layer 2 polling. The study guide explains that MAC notification traps contain the MAC address learned or removed from the switch MAC address table and the associated port, allowing FortiNAC-F to update its database when hosts connect, disconnect, or move. It also states that MAC notification traps are the preferred method for learning and updating Layer 2 information.

If a newly modeled switch does not show hosts as they connect or move between ports, the likely problem is that MAC notification traps are not correctly configured or not reaching FortiNAC-F . Layer 3 polling failure would affect IP-to-MAC correlation, not the ability to learn which switch port a MAC address is connected to. Disabled scheduled polling could delay updates, but it would not be the best explanation when the expected behavior is immediate host detection during connection or movement testing. Contact polling only checks whether the device is reachable; it does not collect host MAC-to-port visibility.

질문 # 41

Which two agents can validate endpoint compliance transparently to the end user? (Choose two.)

- A. Mobile
- B. Persistent
- C. Passive
- D. Dissolvable

정답: A,B

질문 # 42

An administrator wants to build a security rule that will quarantine contractors who attempt to access specific websites.

In addition to a user host profile, which two components must the administrator configure to create the security rule? (Choose two.)

- A. Security String
- B. Endpoint compliance policy
- C. Trigger
- D. Methods
- E. Action

정답: C,E

설명:

A security rule requires a trigger to detect the condition, such as contractors accessing specific websites based on security or traffic events. It also requires an action to define the response, such as quarantining the contractor when the trigger condition is met.

질문 # 43

Which command line shell and scripting language does FortiNAC use for WinRM?

- A. DOS
- B. Linux
- C. Powershell
- D. Bash

정답: C

설명:

Open Windows PowerShell or a command prompt. Run the following command to determine if you already have WinRM over HTTPS configured.

Matches if the device successfully responds to a WinRM client session request. User name and password credentials are required. If there are multiple credentials, each set of credentials will be attempted to find a potential match. The commands are used to automate interaction with the device. Each command is run via Powershell.

질문 # 44

When configuring FortiNAC-F to manage FortiGate VPN users, an endpoint compliance policy must be created for the integration. Why is the endpoint compliance policy necessary for this type of integration?

- A. To validate the VPN user credentials
- B. To validate the VPN client being used
- C. To designate the required agent type
- D. To confirm the installed endpoint certificate

정답: C

설명:

The integration of FortiNAC-F with FortiGate VPN requires a specific policy workflow to bridge the gap between initial user authentication and full network access. When a user connects to the VPN, the FortiGate typically provides the User ID and IP address, but FortiNAC-F requires a MAC address to uniquely identify and manage the endpoint's record.

According to the FortiGate VPN Integration Guide, the Endpoint Compliance Policy is a mandatory component of this setup because it is used to designate the required agent type. Because a VPN connection is Layer 3, FortiNAC cannot "see" the MAC address through traditional SNMP or L2 polling. The compliance policy instructs the system to present a Captive Portal to the remote user, requiring them to download and run either the Persistent or Dissolvable Agent. The agent then reports the device's MAC address back to FortiNAC, allowing the system to correlate the VPN session with a host record.

Once the agent is running and the MAC is known, FortiNAC-F can evaluate the device's security posture (if scanning is configured) and send the necessary FSSO tags back to the FortiGate to lift the initial network restrictions. Without the compliance policy to enforce the agent requirement, the connection would remain in an isolated "IP-only" state with no unique hardware identity.

"The Endpoint Compliance Policy is necessary to control the agent requirement for VPN users. Create a default VPN Endpoint Compliance Policy to distribute an agent via captive portal for isolated machines. This policy allows the administrator to designate the required agent type (Persistent or Dissolvable) that will be used to collect the hardware (MAC) address and perform health scans on the remote endpoint." -FortiNAC FortiGate VPN Integration Guide: Default Endpoint Compliance Policy (Optional) Section.
