Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q239-Q244):

NEW QUESTION # 239

You have an Azure Virtual Desktop deployment that contains an Azure compute gallery. The Azure compute gallery contains an image definition named Definitions Definition1 contains the following image versions:

- * 1.0.0
- * 1.1.0
- * 1.2.0

You need to ensure that when a virtual machine is created from the Azure compute gallery, the 1.1.0 image version is used by default.

What should you do?

- A. Select Exclude from latest for image version 1.2.0. Most Voted
- B. Apply a lock to image version 1.1.0.
- C. Apply a tag named default to image version 1.1.0.
- D. Select Exclude from latest for image version 1.0.0.

Answer: A

Explanation:

Exclude from latest. You can keep a version from being used as the latest image version. <https://learn.microsoft.com/en-us/azure/virtual-machines/shared-image-galleries?tabs=azure-cli>

NEW QUESTION # 240

You have an Azure subscription that includes the identities shown in the following table.

You need to ensure that you can create images by using the Azure Image Builder from the Azure portal.

Which Azure service should you use and which identity should the service use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 241

Drag and Drop Question

You have an Azure subscription that contains a virtual machine named VM1. VM1 runs a customized version of Windows 10 Enterprise.

You generalize the operating system on VM1 and shut down the virtual machine.

You need to deploy additional virtual machines based on an image of VM1 by using the Azure portal.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Create a managed image from a snapshot using PowerShell.

You can create a managed image from a snapshot of a generalized VM by following these steps:

1. Create an image of a VM in the portal, capture a VM in the portal
2. Go to the Azure portal, then search for and select Virtual machines.
3. Select your VM from the list.
4. On the page for the VM, on the upper menu, select Capture.
5. The Create an image page appears.
6. For Resource group, either select Create new and enter a name, or select a resource group to use from the drop-down list. If you want to use an existing gallery, select the resource group for the gallery you want to use.
7. To create the image in a gallery, select Yes, share it to a gallery as an image version.
8. To only create a managed image, select No, capture only a managed image. The VM must have been generalized to create a managed image. The only other required information is a name for the image.
9. If you want to delete the source VM after the image has been created, select Automatically delete this virtual machine after creating the image. This is not recommended.
10. For Gallery details, select the gallery or create a new gallery by selecting Create new. (Step 1)
11. In Operating system state select generalized or specialized. For more information, see Generalized and specialized images.
12. Select an image definition or select create new and provide a name and information for a new Image definition. (Step 2)
13. Enter an image version number. If this is the first version of this image, type 1.0.0. (Step 3)
14. If you want this version to be included when you specify latest for the image version, then leave Exclude from latest unchecked.
15. Select an End of life date. This date can be used to track when older images need to be retired.
16. Under Replication, select a default replica count and then select any additional regions where you would like your image replicated.

17. When you are done, select Review + create.
 18. After validation passes, select Create to create the image.

NEW QUESTION # 242

You have an Azure subscription that contains an Azure Virtual Desktop deployment. The subscription contains the virtual networks shown in the following table.

have virtual network peering configured as shown in the following table.

The deployment contains the session hosts shown in the following table.

Windows Defender Firewall is configured on each session host to allow all network traffic between the session hosts. For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 243

-
 You have two Azure subscriptions that are linked to an Azure Active Directory (Azure AD) tenant named contoso.com and contain an Azure Virtual Desktop deployment. The tenant contains a user named User1.

When User1 signs in to Azure Security Center, the user receives the message shown in the following exhibit.

You need to ensure that User1 can manage security information for the tenant. The solution must use the principle of least privilege.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
